

## What we can do to keep you safe

### JP Maguire and Tomi SteraMist can help when you need it.

These are uncertain times and every day there is new information about the Coronavirus. We have not yet seen the peak of this outbreak and now more than ever it is important to take necessary precautions. Having a plan in place is the first step to mitigating any potential exposures and keeping everyone who enters or uses your facility as safe as possible. While you may have taken the necessary steps by limit the number of people who enter your facility, if you are still open for business there is always a chance of an exposure. This potential for exposure does not end at the front door. Businesses or services that utilize fleet vehicles are all potential areas to contract and spread this virus if proper steps are not taken to disinfect. As we have learned this virus can remain dormant for several days up to two weeks without someone showing any symptoms, if they show symptoms at all. Furthermore, this virus can remain active on some surfaces from 24 hrs up to as long as 3 days. Your plan to disinfect should include a company like JP Maguire that specializes in biohazard remediation. We have the tools and technology that makes us capable of handling regularly scheduled disinfection of your facility or vehicles, as well as if there are any known exposures.

### JP Maguire What Sets Us Apart From Others?

Similar to Influenza A, Coronavirus is an enveloped virus. While this would often serve to protect the virus from possible threats, SteraMist™ features efficacy against Influenza A and other enveloped viruses, including Coronavirus. Tomi (the manufacturer of SteraMist™) has EPA studies to meet the standards to respond to emerging pathogens in the enveloped and non-enveloped categories. This includes SARS, MERS, and Covid-19 the current Coronavirus outbreak.

As part of the Tomi Service Network (TSN), JP Maguire has several trained SteraMist™ technicians that can respond anywhere in Connecticut to promptly disinfect/decontaminate your facility. Using SteraMist has several advantages over other products including minimizing the downtime of your facility and no harsh chemicals. SteraMist™ is 99.999% effective at deactivating the virus within 7 minutes and because the main component of the process is Hydrogen Peroxide, the only byproduct is oxygen and water vapor rather than harsh and corrosive cleaners. SteraMist™ is safe to use around sensitive electronics and expensive industry specific equipment.

JP Maguire adheres to all OSHA regulations and strictly follows the state and federal guidelines when it comes to disease cleanup and disinfection.

- We use CDC and EPA approved cleaners and disinfectants
- Fully encapsulated personal protective equipment (PPE) and full-face respirator masks are worn at all times by our technicians

We understand that the health and safety of you, your family, and your employees are on the line and Because of the high exposure risk; biohazard remediation is a specialty service that requires proper training, equipment, certification, and licensing.

JP Maguire is committed to providing our community the information, tools, and assistance to keep everyone safe and healthy. Do not hesitate to contact whenever you need us. As always we are available 24/7.
