10 YEAR PROGRAM HISTORY

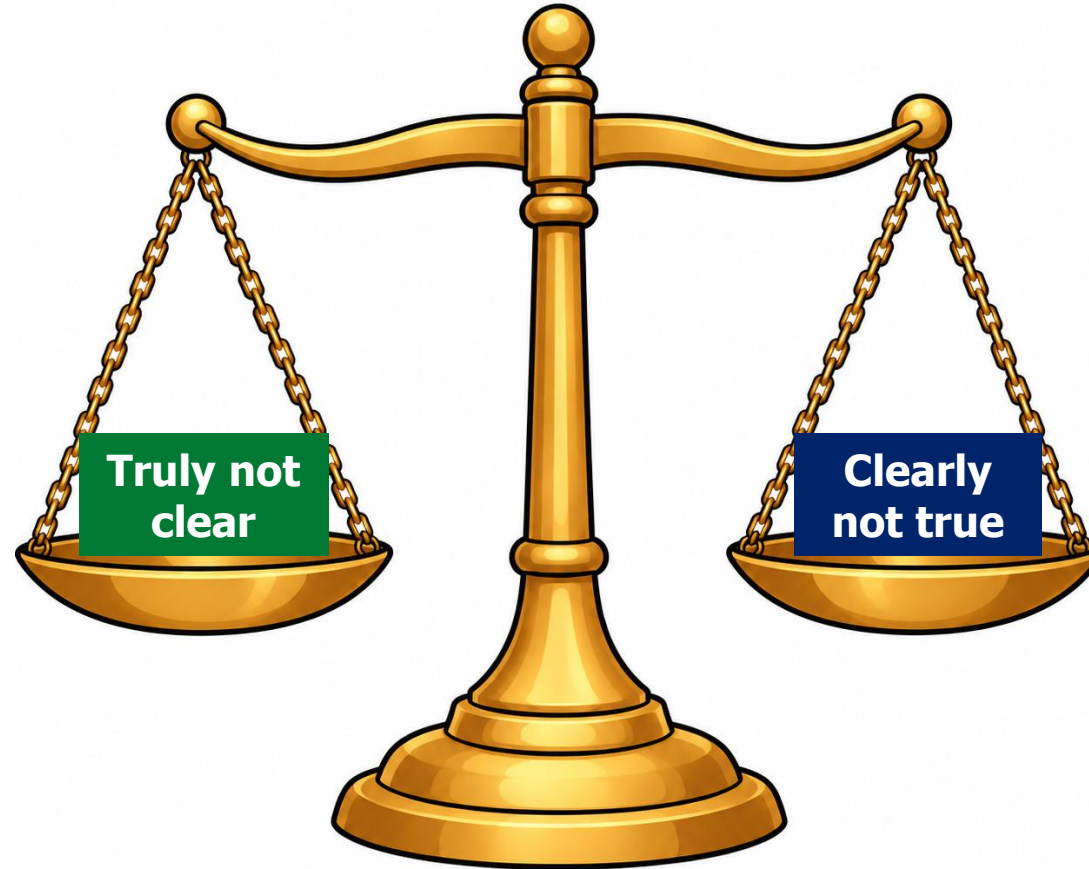

PROJECT DELIVERY TOP THREATS

Threat:	Mitigation:
Funding	Let dates must be met to capture available funding. Estimates must be kept current.
Long Review Times on Permits	Schedules must accurately reflect realistic review time. Permit submissions must be of highest quality.
Bats	Scope and schedule must address this. Multiple bat surveys may be needed.

These are largely out of our control.

BIGGEST CHALLENGE

Big increases in **design schedule**, **design scope**, and **construction estimate**.

TIPS AND TRICKS

Ponds:

Part of PE, not Final design.

Get borings at pond locations.

Structure Borings:

Preferably complete prior
to TS&L approval

Roadway Embankment:

Soils in our District don't
always work with 2:1 slopes.
Use 3:1 where practical.

Vegetation Control:

We want to daylight the ROW
on every job.

Choose a unit that **clearly
communicates** the scope to
the contractor.

Truss Painting:

Deterioration is
much worse than
what you can see.

Increase unforeseen
repair quantity.

ROW for Drainage:

We need access to our
system all the way to a
watercourse.

Concrete Repair on Bridges:

Quantity is usually about 5x what you
can see or 1 ½ x what you can hear.

PROJECT DELIVERY KEY AREAS

Topic:	Description:
Permit Quality	Consistency among plan sets, all documents, and checklists
Maintaining Schedules	Having more negative float than the amount of time since the last update
Losing Momentum 8 Months Before Let	Turning 90% plans into a final PS&E
Keeping Estimates Current	Significant impact to our ability to program and let projects.
Utility Coordination	Throughout project, continuing from let to construction.
Keeping Up to Date with Publication Changes	Chasing new standards at the last-minute leads to errors and inconsistency.

We control these.

DBE UPDATE

WORKFORCE DEVELOPMENT

What We've Always Done:

- One year rotation through entire operation for brand new civil engineers.
- Opportunities for rotation, winter reassignment, etc.
- Lots of training.
- Paths to promotion for both engineers and non-engineers.

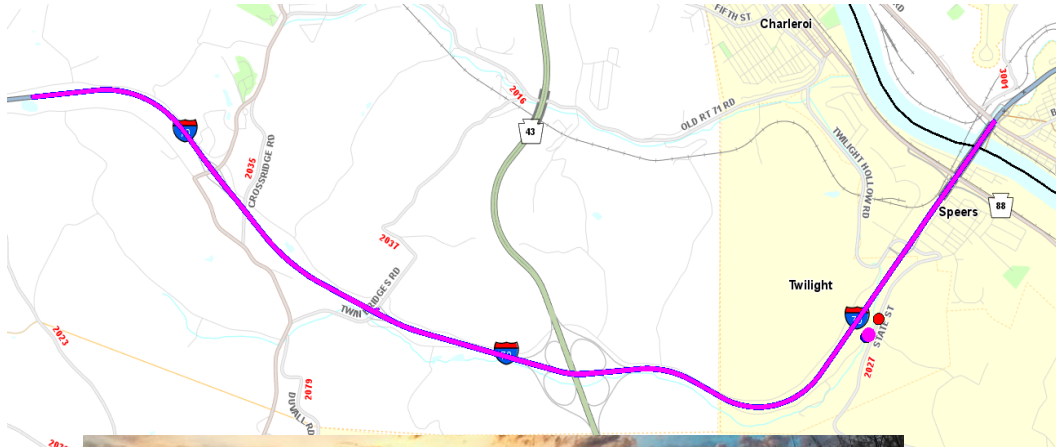

Recent Developments:

- EIT and PE review classes during work day.
- CE council that is **dedicated** to the **development** of newer employees in engineering and technical positions.

Recruiting and retaining engineers will always be a challenge, but the related positions like drafting, appraising, and surveying are much more challenging right now.

I70: BELLE VERNON BRIDGE TO BENTLEYVILLE

This project is the reconstruction of Interstate 70 from the Belle Vernon Bridge to Bentleyville in Twilight and Speers Boroughs, and Fallowfield Township Washington County.

The scope of work will involve the reconstruction of I-70 to accommodate ten-foot median, twelve-foot lanes (4) and twelve-foot shoulders including updating ITS, drainage, guide rail, signing and pavement marking. Five interchanges and three structures are within the project limits.

I70: WELCOME CENTER TO TAYLORSTOWN

This project involves improvements to the Interstate 70 Corridor between the Welcome Center and the Taylorstown Interchange in Donegal Township, Claysville Borough, and Buffalo Township, Washington County. Improvements are anticipated to include pavement reconstruction/rehabilitation and addressing geometric, operation and safety issues. Also anticipated to be included are improvements to sixteen(16) structures and permanent removal of two (2) structures within the project limits.
