

PROTECT OUR FUTURE INVEST IN INFRASTRUCTURE

Our energy infrastructure is aging.

New technologies are developing rapidly and generating massive power demand. This power generation is in a different pattern than traditional requirements and aging infrastructure can not keep up. Investment is critical to bring growth to Wisconsin.

FACTS

State support is crucial.

- New technology frequently falls afoul of old legislation, like the previous debate on electric vehicle charging stations.
- Emerging industries, like data centers, require much more power than other consumers and are being built in rural areas.
- Wisconsin's energy infrastructure and power sources lag behind neighboring states, putting us at risk of missing out.

SOLUTIONS

Act now.

- Work with new customers, utilities and experts to slash regulatory hurdles to expansion and development.
- Invest state resources in new power generation, electric vehicle charging plans and associated infrastructure to attract new industries.
- Utilize ACEC Wisconsin as a resource for neutral expertise on engineering and technical items.

CONTACT US

ACEC Wisconsin and our professional engineering member firms are your resource for smart, sustainable infrastructure solutions. Let's work together together for a stronger, safer Wisconsin.
