

PROTECT OUR FUTURE INVEST IN INFRASTRUCTURE

State-owned buildings are getting older and harder to maintain.

Wisconsin's vertical infrastructure is where its citizens work, live and thrive. These buildings are aging rapidly, wasting energy and diminishing productivity. Recent investments have helped but the state's backlog is still over \$6 billion.

FACTS

Investment is vital to keep Wisconsin competitive.

- Aging structures scare away top talent and limit overall capacity. Retaining top talent in the state keeps Wisconsin's economy growing.
- Building projects are designed to last decades, making bonding an attractive option with today's lower interest rates.
- New facilities are cheaper to operate because of new technology and greater energy efficiencies which helps meet sustainability goals.
- Modern design promotes wellness and creates more inviting spaces, giving those places an advantage in workforce competition.

SOLUTIONS

Deliver a robust Capital Budget to continue the momentum.

- Fund the Department of Administration's request for design funds so projects can get to the shovel-ready point faster.
- Continue to refine the State Building Commission process to speed along project approval with appropriate oversight.

CONTACT US

ACEC Wisconsin and our professional engineering member firms are your resource for smart, sustainable infrastructure solutions. Let's work together together for a stronger, safer Wisconsin.
