

PROTECT OUR FUTURE INVEST IN INFRASTRUCTURE

Clean water is a public right.

Today's designs remove pollutants more effectively, reduce operating expenses, and extend the life of critical assets. Upgrading infrastructure isn't just maintenance — it's a smart investment that protects public health, strengthens local economies, and keeps water affordable for the people you serve.

FACTS

Water utilities are critical for public safety and wellness.

- The state's Environmental Improvement Fund (EIF) is the most-used water fund for municipal projects.
- EIF covers both sanitary sewer and drinking water funding, impacting a wide range of water needs.
- The EIF is a revolving loan fund which means all loans out are paid for by loan repayments coming in.
- Increased bonding authority provided in the 2025-27 Biennial Budget made a huge difference for funding projects.
- Continuous upgrades and increasing demand create growing needs for EIF funding.

SOLUTION

Thank you for supporting increased EIF bonding authority.

- Continue to support EIF bonding authority increases to provide funding for projects across the state.

CONTACT US

ACEC Wisconsin and our professional engineering member firms are your resource for smart, sustainable infrastructure solutions.

Let's work together together for a stronger, safer Wisconsin.
