**Roger F. Wicker's
Center for Ocean Enterprise**

1. Coastal CUBEnet
A high-resolution coastal ocean sensor, modeling, and data sharing network that supports collaborative ocean research, environmental monitoring, and maritime operations. It provides a test and evaluation (T&E) area for emerging maritime technologies, enabling near-time data collection, visualization, analysis, and AI tools.

2. Auxiliary AI Sensor Fusion using RUMBLE's OpenAI for Target Detection, Classification, and Localization
Real-time vessel sensing and classification using edge AI processing to enhance maritime domain awareness.

3. Hypoxia Mapping in the Gulf of America
Using unmanned surface vehicles for hypoxia detection and monitoring from the remote continental shelf.

4. Improving Underwater Magnetic Target Detection using Unmanned Maritime Vehicles
Characterize metallic objects of interest with quantum magnetic sensors deployed on unmanned marine vehicles to collect magnetograms.

5. Deepening and Evaluating AI for Hydrography and Bathymetry
A generative AI system for streamlining hydrographic survey data processing, to allow users to create custom workflows, automate data analysis, and perform visualization without requiring any coding skills.

6. AI-Powered Analytics & Real-Time Data Insights
Imagery, Acoustic, or other datasets, enhancing predictive capabilities, anomaly detection, and environmental intelligence.

7. Scalable Test Bed for Unmanned Systems & Sensors
Supports testing and validation of autonomous machine technologies, including UUVs, USVs, and surface networks, in real-world conditions.

8. Enhanced Environmental Intelligence
Fuses multiple data sources—including hydrodynamic models, in situ sensors, and remote sensing—to create a comprehensive understanding of marine environments.

9. Workforce Training & Industry Collaboration
Provides training and certification programs to equip professionals with the skills needed to operate and interpret oceanographic technologies.
