

An aerial photograph of the NCAT Pavement Test Track. The track is a long, winding asphalt road that curves through a dense forest. The road is light-colored, contrasting with the dark green trees. There are some buildings and parking areas visible on the left side of the track. The text "PERFORMANCE OF MODIFIED ASPHALTS USED ON THE NCAT PAVEMENT TEST TRACK" is overlaid in large, bold, black letters with a white outline at the bottom of the image.

**PERFORMANCE OF MODIFIED
ASPHALTS USED ON THE
NCAT PAVEMENT TEST TRACK**

ORIGINAL 2000 EXPERIMENT

2000 RUTTING PERFORMANCE

NORTH TANGENT RUTTING

ASPHALT CONTENT

BINDER FAILURE GRADE

MODIFIED vs UNMODIFIED

EFFECT OF AGE ON RUTTING

MODELED vs ACTUAL RUTTING

LABORATORY RESULTS

2000 TRACK FINDINGS

- Fine Graded Mix Performance Comparable to Coarse
- Change to Modified Asphalt Cut Rutting in Half
- Bumping Modified AC ½ % Doesn't Increase Rutting
- Experimental Mixes Field Proven (e.g., Gravel SMA)
- Aggregates Safely Evaluated (e.g., Polishing)
- Field Correlations Prove Laboratory Test Methods
- Findings Led to Sponsor Specification Changes

2003 MIXED EXPERIMENT

Red – Mill and Inlay New Mix Performance Sections (14)
Blue – Excavate and Install New Structural Sections (8)
Black – Extend Original Rutting Study to 20M ESALs (23)

2003 RUTTING PERFORMANCE

DURABILITY EXPERIMENTS

2003 STRUCTURAL STUDY

MEASURED PAVEMENT RESPONSE

N2 CRACK MAP – 10/21/03 (0.0M)

N2 CRACK MAP – 6/21/04 (2.6M)

N2 CRACK MAP – 6/28/04 (2.7M)

N2 CRACK MAP – 8/2/04 (3.2M)

N2 FATIGUE CRACKING

TERMINAL N2 CRACK MAP

BOTTOM-UP CRACKING

N1 & N2 – 10/11/04 (4.1M ESALs)

LABORATORY DATA

2003 STRUCTURAL FINDINGS

- Pavement Response **Measured** at Known Temperatures
- Mechanistic Pavement Analysis Approach **Validated**
- Pavement Response **Predicted** at All Temperatures
- Damage (Strains) **Accumulated** with Each Axle Pass
- Mechanistic-Empirical Pavement Design **Calibrated**

- Both 5" Sections Failed (Slightly Later than Expected)
- Some Fatigue Cracking in 7" Sections (Much Later)
- No Cracking Observed in Either 9" Section

2006 RECONSTRUCTION

2006 TRACK SPONSORS

2006 TRACK OBJECTIVES

- Continuation/Expansion of Structural Experiment
 - Top-Down Cracking
 - Perpetual Pavement Designs
 - Weak Subgrades
- Flat and Elongated Coarse Aggregate Effects in OGFC
- Twin Layer Placement of Dual Drainage Layers
- RAP Percentage and Binder Grade
- Gravel Open Graded Friction Coarse
- Effect of Varying Air Voids on Performance
- Pavement Preservation Techniques in Texas (+Infrared)
