▶ ABOUT ATEC

The Aviation Technician Education Council (ATEC)

is a partnership of aviation maintenance technician schools, organizations that support them, and employers that hire their graduates. The council is dedicated to promoting and supporting technician education through its communications, advocacy programs and networking events. To learn more, visit <http://www.atec-amt.org/>.

photo courtesy of WSU Tech

OVERVIEW

Each year ATEC compiles information about Federal Aviation Administration (FAA) airframe and powerplant (A&P) mechanic certificate holders, the aviation maintenance technician schools (AMTS, “part 147 programs,” or “A&P schools”) that prepare the majority of those individuals for careers in aviation maintenance, and the companies that employ maintenance professionals.

ATEC publishes this compilation annually as *The Pipeline Report*.

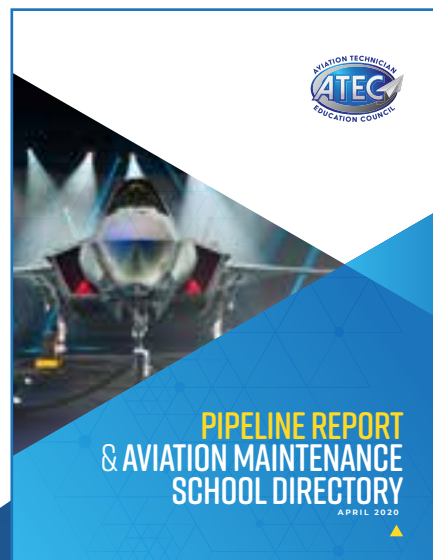

This year’s edition covers the period since the last version was published in October 2021. Since then, the aviation industry has bounced back from one of the most significant declines in both depth and duration in the history of commercial air transport.

This year’s report takes a closer look at the pandemic’s backlash, and the effect it has had on the current workforce and pipeline of incoming technicians.

2021

2020-2019

2018

KEY CONCLUSIONS AND RECOMMENDATIONS

- ▶ In total, 6,929 individuals obtained their FAA mechanic certificate last year, a 33 percent increase from the previous year. Although the jump was the biggest realized in recent history—and largely expected given the pandemic-induced backlog—the increase fell short of 2019 levels and did not make up for the previous year's 30 percent drop in certifications.
- ▶ When considering the loss of momentum going into 2019, ATEC estimates that the pandemic cost industry 5,000 new mechanics. That loss will continue to mount until certification rates surpass pre-pandemic levels.
- ▶ For what we hope is the last time, AMTS cited burdensome FAA regulations as the largest barrier to growing their programs. This year's promulgation of a new part 147—a direct rule born out of ATEC's advocacy efforts—removes seat time requirements and outdated curriculum mandates and introduces new certification standards that will ultimately narrow the knowledge gap for new entrants. The new regulation also provides more opportunity to collaborate with industry on curriculum and for programs to develop new pathways using additional training locations.
- ▶ Last year, major airlines hired a quarter of all A&P graduates, up from 15 percent in 2020. This will put more pressure on sources that traditionally feed skilled technicians to large carriers, such as repair stations and regional carriers, to fill open positions. It will also sharpen calls to ensure A&P curriculum is as closely aligned with real-world needs as possible to avoid costly re-training that often accompanies new hire training at air carriers.
- ▶ A growing number of organizations are increasing collaboration with representatives from under-represented communities as part of pipeline development efforts, and that could be having its intended effect on the workforce. AMTS reported 9 percent of A&P graduates were female (compared to 2.57 percent representation in the broader mechanic population), and 40 percent of graduates represent a racial or ethnic minority.
- ▶ The mechanic pipeline will need to increase production by at least 20 percent to meet projected workforce demand. In comparison, AMTS enrollment is growing only about 2 percent a year. Given A&P schools are not full—the national student load factor is 56—and that program awareness is continually cited as one of the top barriers to program growth, industry would stand to benefit from a focused, national effort to drive enrollment into A&P schools.
- ▶ An increase in high school pipeline programs could be the answer—AMTS with these types of partnerships report low attrition and increased career awareness in their communities. The Choose Aerospace aviation maintenance curriculum is a new resource available to high schools looking to build pipelines into FAA-certificated maintenance programs. The project—funded by the ATEC community—proved out the concept in last year's pilot test and has the lofty goal of enrolling 10,000 high school students by 2027. Continued efforts by the AMTS community to formalize matriculation into A&P programs is one viable and growing opportunity to address the workforce shortage.
- ▶ Forty-two percent of aviation technician school graduates do not take the exam necessary to receive FAA mechanic certification. While AMTS cite several reasons for the deficiency, testing capacity (i.e., the availability of Designated Mechanic Examiners (DME)) is a growing concern—especially for schools with increasing program enrollment or those that require FAA testing as a condition of graduation. For that reason, ATEC will continue its call for expansion of the FAA's Organization Designation Authorization program to include DME, so that DME approvals are not solely dependent on the FAA local official's ability to approve and oversee those designations.
- ▶ Survey respondents report an average starting hourly rate for certificated AMTS alumni at \$25.49 per hour (or \$53,019 annually), an increase of 12 percent over last year and nearly 20 percent over the past 2 years. This steep increase in entry-level pay is further evidence of the growing demand for technical personnel.

▶ DATA SOURCES

Unless otherwise indicated, data was generated through an ATEC-conducted survey of educational institutions holding an FAA certificate, issued under Title 14 of the *Code of Federal Regulations (CFR)* part 147. The survey took place between January 19 and February 18, 2022.

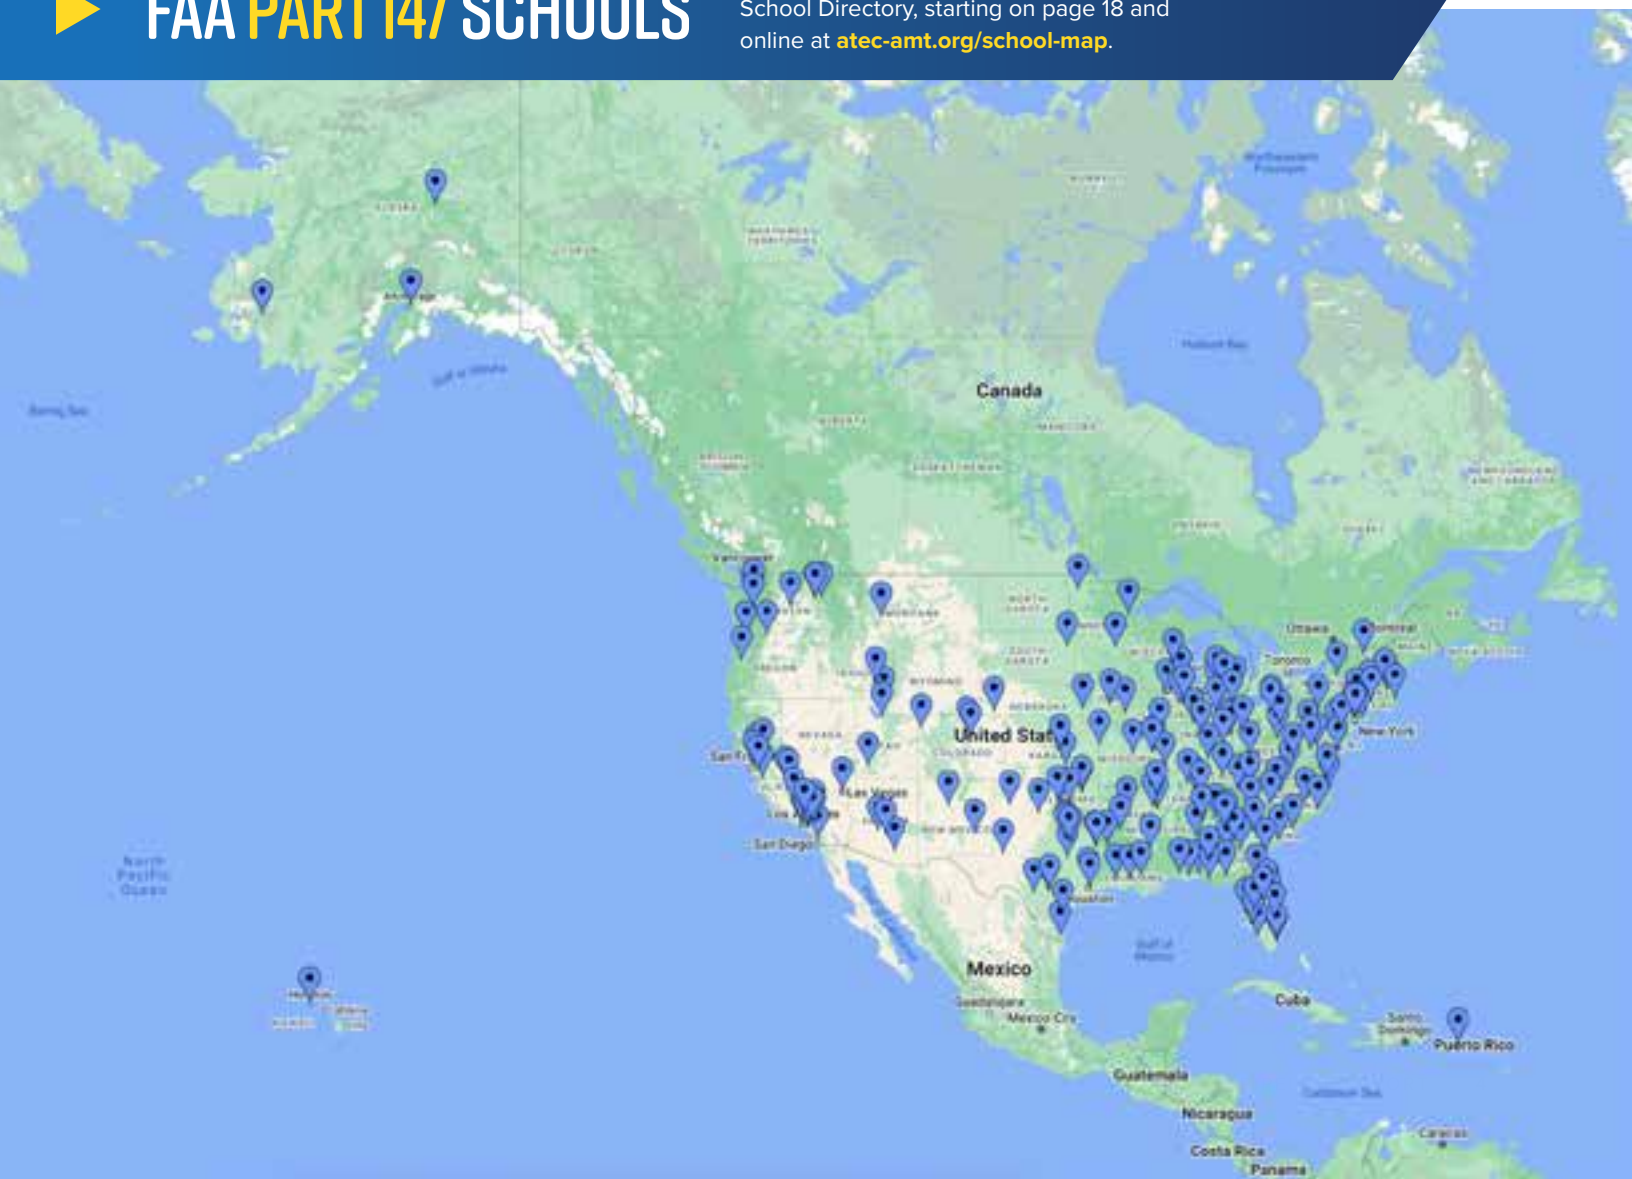

In total, 53 percent of all FAA-certificated AMTS responded to the questionnaire. A list of contributing schools is provided starting on page 15.

Additional data was gathered from the National Center for Education Statistics, FAA Airmen Certification Branch personnel, the FAA maintenance school database, the FAA U.S. Civil Airmen Statistics, Regional FAA Active Airmen Tables, FAA data downloads, and the FAA airmen certification database.

The information in this report is based on data available as of September 15, 2022.

▶ FAA PART 147 SCHOOLS

Data gathered also populates ATEC's Part 147 School Directory, starting on page 18 and online at atec-amt.org/school-map.

INDUSTRY BACKDROP

Just as the dramatic downturn in traffic during the pandemic affected near-term staffing needs for companies that employ A&Ps, the rapid recovery—at least in the U.S. domestic market—is having similarly far-reaching ramifications.

On the airline side, traffic and fleet activity has rebounded more quickly than many expected. International Air Transport Association figures show that passenger traffic as measured in U.S. domestic revenue passenger miles for September 2022 were actually higher than September 2019, while capacity—or available seat miles—were just 3 percent below September 2019.

The figures underscore that, in the U.S. at least, air travel is back to pre-pandemic levels. Indeed, the primary factor preventing U.S. airlines from being busier than they were in 2019 is a lack of qualified, skilled labor—including maintenance personnel.

Many airlines that trimmed their workforces during the uncertain days of 2020 now find themselves scrambling to meet demand. In the aircraft maintenance world, an already strained labor force is being stressed in multiple ways. Airlines need qualified staff to keep their fleets flying, and many third-party maintenance providers are seeing strong demand from customers that rely on them. One major U.S. maintenance provider reported in mid-summer 2022 that its airframe maintenance hangar slots are largely filled until the middle of 2023.

Longer-term, the same pressures facing the global aviation maintenance workforce—an aging population in some key markets and projected airline growth—have not gone away. They will soon be joined by new sources of pressure, such as urban air mobility and drone fleets, that will need trained technicians. One aspiring electric air taxi startup plans to have its first aircraft certified in 2024. It then plans to build 250 of them in 2025 and quickly scale up production rates.

Aircraft operators and third-party maintenance providers are responding by investing in their technician workforce pipelines, both directly and indirectly. New-hire bonuses are common at many carriers. Some are increasing their connections with technical schools to ensure they have plenty of candidates in the pipeline.

Some forward-looking carriers are investing in communities that have been traditionally under-represented in the aircraft maintenance world, notably women and people of color. Efforts to both reach these candidates and provide critical financial and other assistance to people of all backgrounds are growing—a sign that industry recognizes it must tap new sources of potential A&Ps.

▶ THE WORKFORCE

POPULATION AND DEMOGRAPHICS

The FAA airmen database includes 313,093¹ certificated mechanics, a 2.2 percent increase over the previous year's population. The number of mechanics has stayed relatively flat over the past two decades. Adjusting for 2016—when the FAA required application for reissued plastic certificates—the population has grown at the average rate of 1 percent a year. The rate ticked up slightly in more recent years—with the mechanic population growing an average 2.3 percent over the past 5 years (see Figure 1).

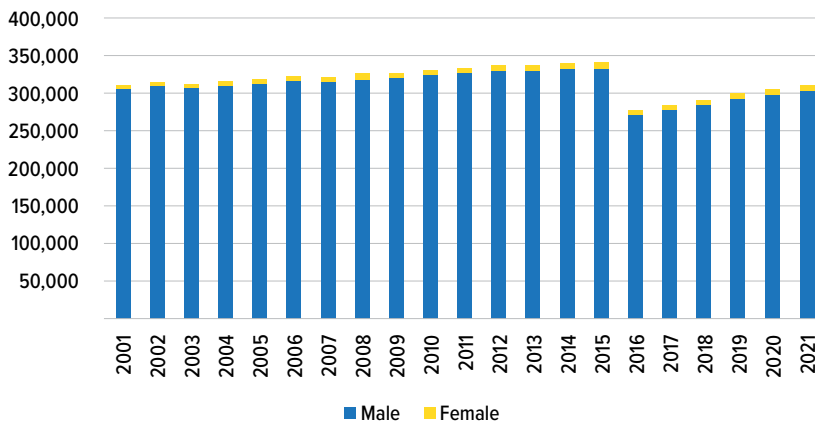

FIGURE 1:
Certified Mechanics

SOURCE: FAA US Civil Airman Statistics

Females make up 2.63 percent of the population, a number that is trending up, but only by tenths of a percent every year. A decade ago, females made up 2.23 percent of the mechanic population.

The aviation mechanic population continues to grow older. The average FAA mechanic is 53, which is 11 years older than the usual U.S. worker as reported by the Bureau of Labor Statistics. Females comprise a much younger demographic; the average female mechanic is 45.

Thirty-eight percent of the mechanic population is age 60 or older—up two basis points from last year (Figure 2).

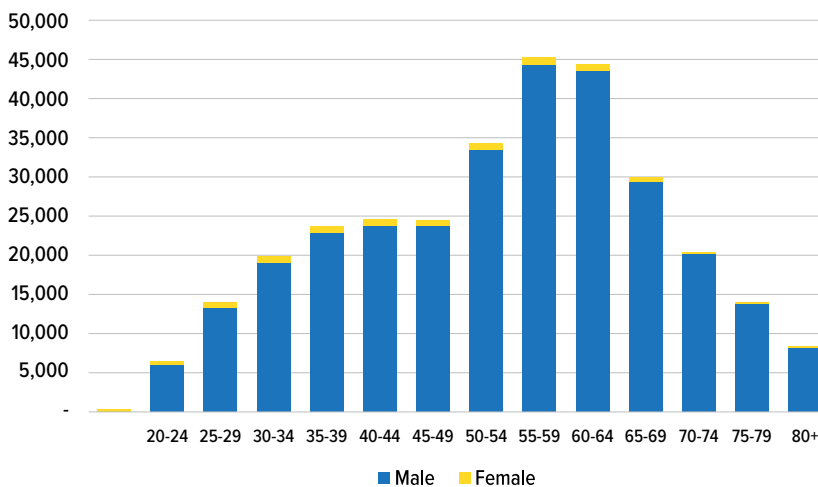

FIGURE 2:
Mechanic Age Distribution

SOURCE: FAA Airmen Certification Branch

¹ The FAA does not track whether mechanic certificate holders are working in the U.S. or actively performing maintenance. Certificated mechanics are removed from the airmen database only when the agency receives notification of death, the certificate is suspended or revoked, or the mechanic turns 90 years of age. Therefore, the number of active mechanics is likely significantly lower than the number derived from the data source. For purposes of this analysis, ATEC assumes 80 percent of the current mechanic population under age 65 is actively engaged as an aircraft mechanic.

THE WORKFORCE

COVID EFFECTS

Last year's expectation that COVID only delayed mechanic testing did not come to fruition—**6,929 individuals obtained their FAA mechanic certificate last year, a 33 percent increase from the previous year. Although the jump was the largest realized in recent history, it fell short of pre-pandemic certifications and did not make up for the previous year's 30 percent drop in certifications, which amounts to a loss of around 2,100 new mechanics.**

Accounting for the loss of growth momentum (certification rates were increasing around 9 percent a year going into 2020), ATEC estimates that the pandemic deterred 5,000 individuals from seeking mechanic certification. Those workforce losses will continue to mount until we can regain pre-pandemic momentum.

CERTIFICATION PATHWAYS

AMTS continue to increase their market share of mechanic production. Last year, 67 out of every 100 new mechanics went through A&P school. The other 14 came from military and 19 from civilian work experience (Figure 3).

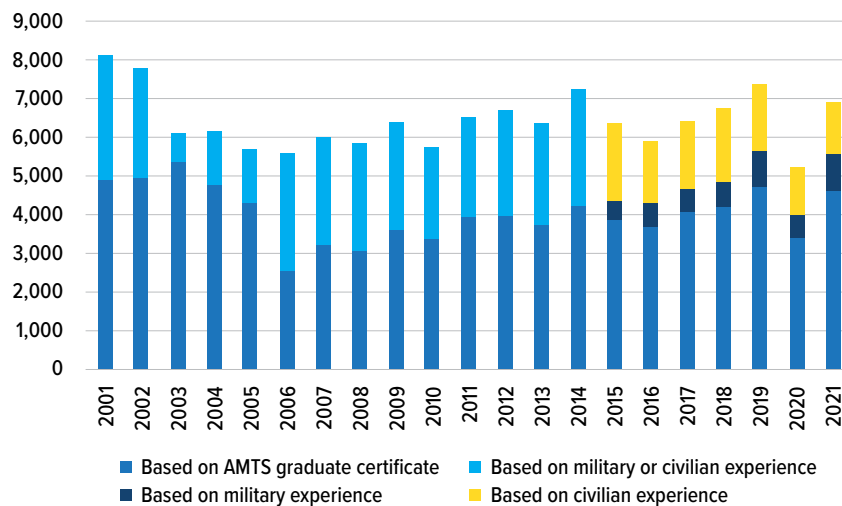

FIGURE 3:
New Mechanic Certificates

SOURCE: FAA Airmen
Certification Branch

While all paths to certification (AMTS, military experience, and civilian experience) produced fewer certificated mechanics in 2021 than the year previous, A&P schools fared the best, with a 28 percent decline in new certifications compared to a 32 percent decline in the number of individuals achieving FAA certification via previous military or civilian experience.

Looking at the 2-year trend, AMTS averaged a 5 percent increase in mechanic output in 2020 and 2021. Certifications based on military experience fell 12 percent over the same period; those based on civilian experience fell by nearly a quarter.

Schools are producing more female mechanics than the experienced-based pipelines—6 percent of AMTS-sourced mechanics were female, compared to 3 percent for those sourced from military or civilian experience.

AIR AGENCY EMPLOYEES

Although the FAA airmen database is an important source for identifying and analyzing mechanic population and pipeline trends, a more accurate representation of the current workforce can be derived from analyzing air agency employee reports.

Forty percent of all FAA mechanic certificate holders—126,143 individuals—are accounted for by the FAA² as working in general aviation,³ or for repair stations, air carriers,⁴ or AMTS. The number of mechanics working for these air agency certificate holders increased by 5 percent in 2021.

Certificated mechanics account for 34 percent of all aviation technical personnel employed in these segments—including 76 percent of the air operator maintenance workforce, 22 percent of the repair station workforce, and 88 percent of the general aviation workforce.

Nearly 80 percent of all technical personnel and half of all certificated mechanics are employed by repair stations (Figure 4).⁵

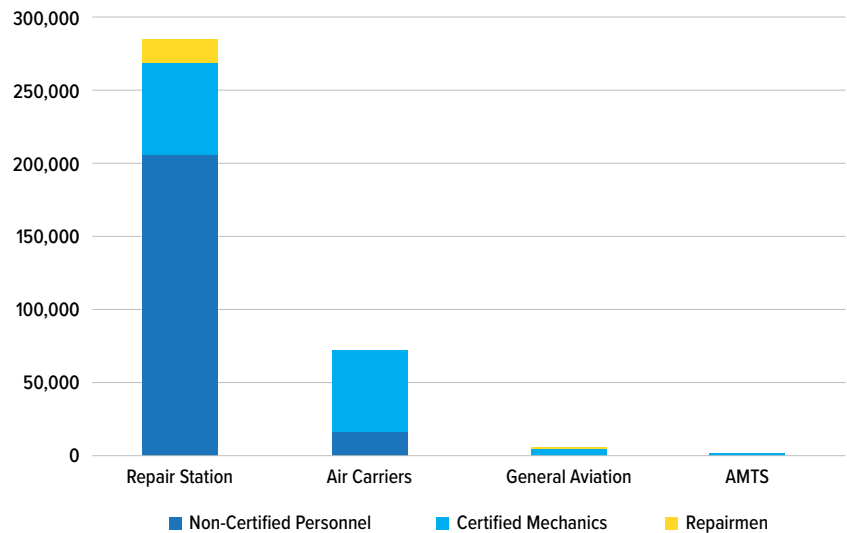

FIGURE 4:
Technical Personnel
Aviation Employers

SOURCE: FAA Data Download for
Repair Stations and Air Operators

² The FAA repair station and air operator data does not include certificated employees of design approval holders, those that work as maintenance contractors, or those employed elsewhere in the supply chain.

³ Includes entities certificated under 14 CFR parts 91, 133, and 137.

⁴ Includes entities certificated under 14 CFR parts 121, 125, 129, and 135.

⁵ See FAA repair station data download, FAA air operators data download, and FAA mechanic schools data download.

PROJECTED SHORTAGE

By 2031, two out of every five current mechanics—more than 90,000 mechanics in total—will reach retirement age.

The stream of new mechanics will replace some of those exiting mechanics (Figure 5). Based on historical output, 79,000 mechanics will enter the field in the next 10 years, 11,000 short of what is needed to replace those reaching retirement age.

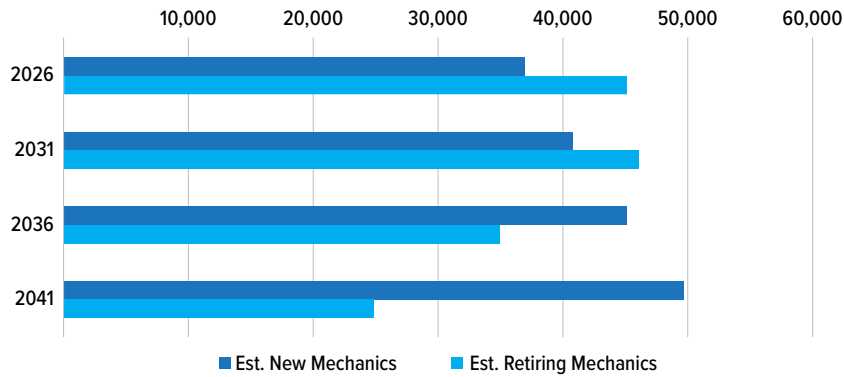

FIGURE 5:
New vs. Retiring Mechanics

SOURCE: FAA Airmen Certification Branch Age Distribution Data Set and FAA US Civil Airman Statistics

When taking into consideration new demand driven by anticipated industry growth, the mechanic population is expected to fall nearly 30,000 mechanics short of meeting just commercial aviation needs by 2031 (Figure 6).

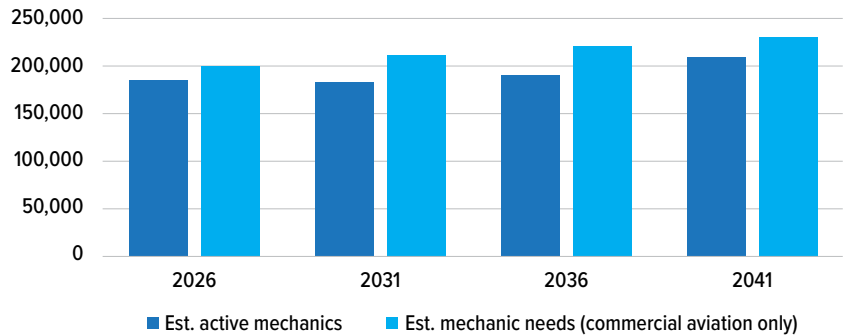

FIGURE 6:
Mechanic Shortage Projection

SOURCE: FAA Airmen Certification Branch Age Distribution Data Set, FAA US Civil Airmen Statistics, and Boeing Technician Outlook

The projection does not consider non-commercial personnel needs, meaning it leaves no bandwidth available to meet increased workforce demand for rotorcraft, business aviation, general aviation, or emerging technologies.⁷

⁶ The shortage calculation is based on projected demand set forth in the *Boeing Pilot and Technician Outlook*. ATEC's model adjusts demand projections for certificated personnel needs in the U.S. It assumes that most of North American estimated demand (85 percent) comes from the U.S., and the average distribution of certificated vs. non-certificated personnel holds constant across all sectors of aviation at 33 percent.

⁷ Shortage projections are based on the 2022 *Boeing Pilot and Technician Outlook*, which provides only projected demand for commercial aviation.

AVIATION MAINTENANCE TECHNICIAN SCHOOLS

POPULATION AND ENROLLMENT

The gradual increase in the number of certificated programs continued in 2021. The FAA oversaw 188 AMTS last year—one program no longer holds an FAA certificate and three new programs were added (Figure 7).

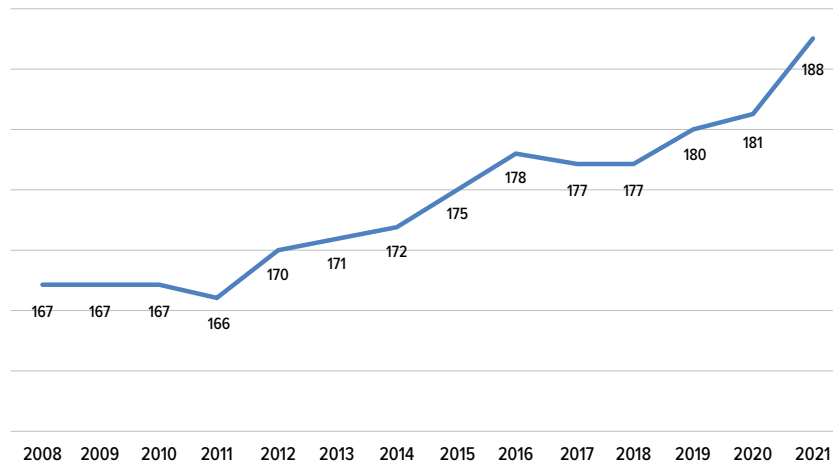

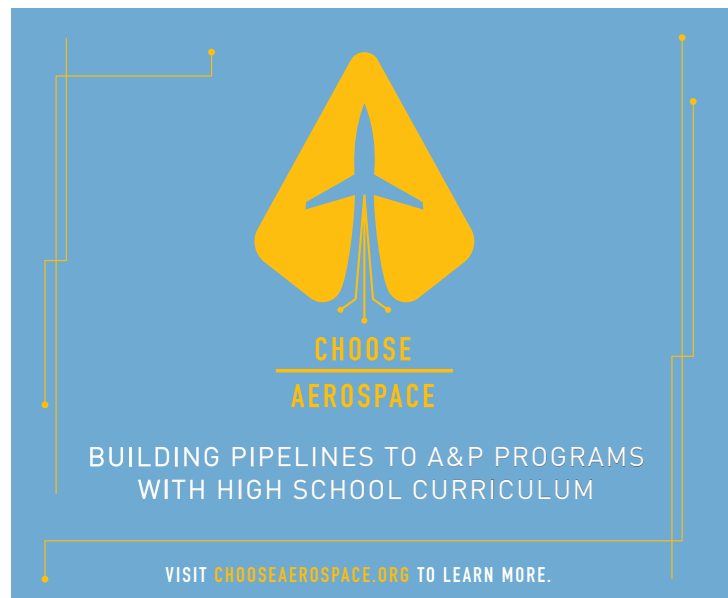

FIGURE 7:
Number of Aviation Maintenance Technician Schools

SOURCE: FAA Mechanic School Data Download and ATEC Database

Although the number of A&P programs increased, estimated total A&P student enrollment for 2021 was 21,089, a very small increase over last year's reported enrollment. Program capacity—the number of students the FAA will allow an AMTS to enroll—was also stagnant at 37,252.

Enrollment trends are concerning. Since 2015, AMTS student enrollment has increased an average of only 2.2 percent a year, well short of the 21 percent annual increase necessary to meet projected workforce needs for the commercial market alone.

The bulk of the lag can be attributed to enrollment at public institutions, which decreased 2.3 percent during the pandemic. On the other hand, private institutions grew their enrollment by 11 percent over that same period, with the subset of private, proprietary schools driving the majority of that growth. The 29 private, proprietary programs grew enrollment by 16 percent in 2020 and 2021, and while that segment makes up only 15 percent of all AMTS, it enrolled nearly one-third of all A&P students.

AVIATION MAINTENANCE TECHNICIAN SCHOOLS

The student load factor—that is, the number of available AMTS seats vs. the number of enrolled students—stayed steady at 56. **Nationally, nearly two out of every five available AMTS seats remain open** (Figure 8).

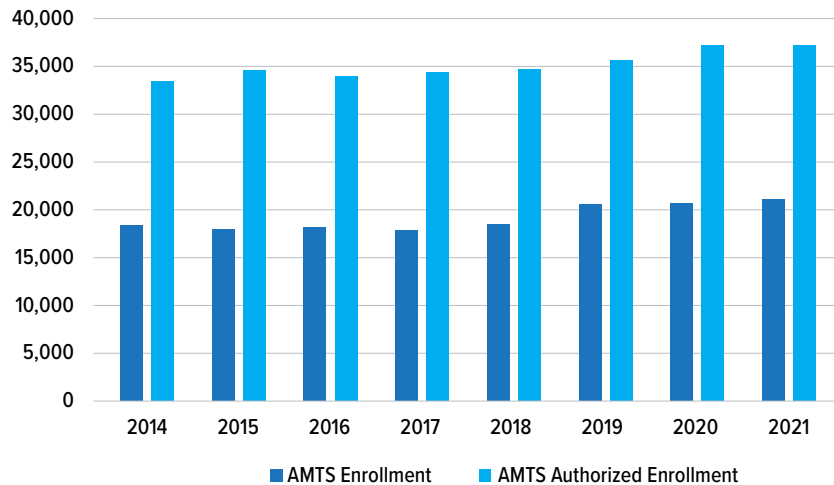

FIGURE 8:
AMTS Enrollment vs. Capacity

SOURCE: FAA Mechanic School
Data Download and ATEC Database

When asked what outside factors are the most significant barriers for program growth, half of AMTS cited burdensome FAA regulatory requirements, a risk that was substantially mitigated with promulgation of the new part 147 earlier this year. Insufficient program awareness retained a top spot again this year, as did the inability to hire and retain qualified faculty (Figure 9).

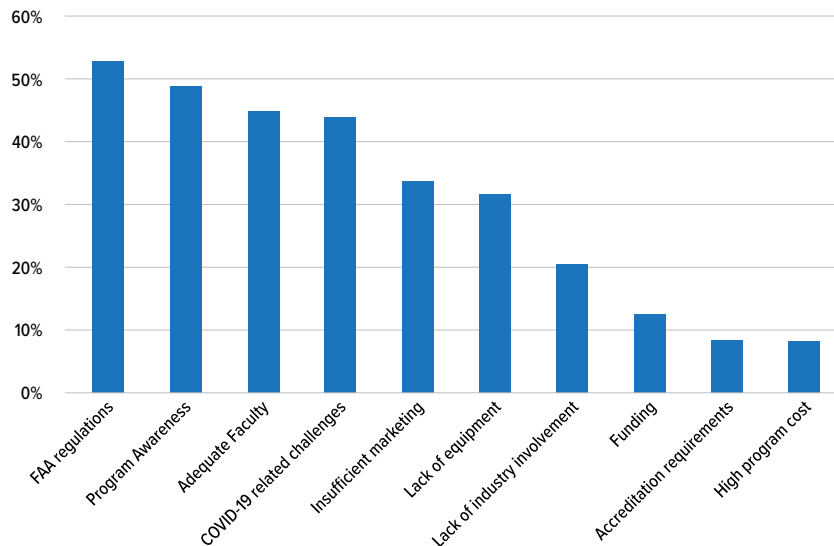

FIGURE 9:
What drove the change in
overall technical aviation
program enrollment?

DEMOGRAPHICS

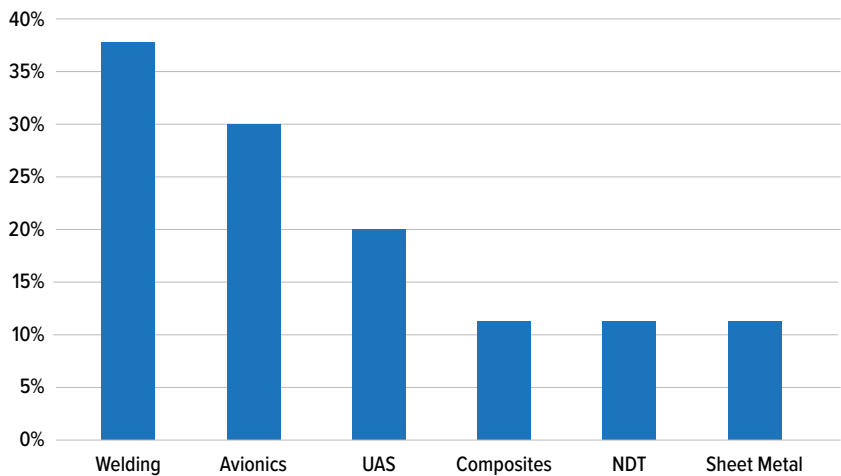

Seventy-seven percent of A&P programs are public institutions; the remaining 23 percent of programs are made up of private, nonprofit institutions (7.5 percent) and private, proprietary programs (15.5 percent).

A few schools dominate overall enrollment. One-third of all A&P students are enrolled at the 10 largest A&P programs. The AMTS community is, therefore, composed mostly of smaller institutions, with more than half of AMTS reporting 60 or fewer enrollments.

As was the case last year, nearly half of all A&P students reside in Florida, New York, Texas, California, or Georgia. Oklahoma is closing in on the top five, reporting a 12 percent increase in enrollments over the past 2 years. Kansas, Illinois, and West Virginia saw the fastest growth last year, reporting 30, 26, and 20 percent increase in enrollments, respectively.

PROGRAMS AND DEGREES OFFERED

To meet the growing demand for specialized services, more than half of all AMTS provide standalone, aviation-related programs outside an A&P program, including welding, avionics, and unmanned aircraft systems (Figure 10).

The ASTM NCATT Aircraft Electronics Technician (AET) certification remains the most popular third-party credential for A&P programs closely followed by NC3 Multimeter certification, NC3 Precision Measuring Instruments, and NC3 Torque Fundamentals certification.

Sixty percent of all AMTS offer the A&P program as part of an associate's degree. One in ten schools offer an A&P program as part of a 4-year degree. Eleven part 147 certificates are held by high schools.

GRADUATES

Survey respondents reported an average graduation rate of 68 percent for A&P students, a much-improved rate over the past 4 years. The average age of an A&P graduate is 24. Consistent with previous years, 22 percent of graduates are veterans and 47 percent are a racial or ethnic minority. **The female A&P student population was 9 percent, right between the 8 reported in 2019 and the 11**

TABLE 1:
Students by State

Rank	State	'21 A&P Student Enrollment	Percent Change	Rank	State	'21 A&P Student Enrollment	Percent Change

16	MI	414	-21.7				

FIGURE 10:
Other than A&P, what technical aviation programs does your school offer?

percent reported last year. Foreign nationals made up 5 percent of the 2021 student population.

Although in the past, respondents have been fairly optimistic when reporting anticipated graduate numbers for the coming year, the 2022 graduating class is expected to increase by only 0.5 percent, meaning more stagnation is expected.

Of those eligible for placement, 47 percent of graduates had a job offer upon graduation and a record 98 percent of those reported were placed in aviation jobs. The number of A&P students landing jobs in aviation was much improved over last year where a quarter of graduates took jobs outside the industry. While the 2020 drop was certainly attributable to hiring freezes instituted by many aviation employers during the COVID-19 pandemic, the 2021 hiring rate suggests aviation companies are making up for the ensuing talent gap.

The number of graduates obtaining FAA mechanic certification dropped for the second year in a row. Since the 2018 high of 81 percent, the certification rates have consistently dropped for the past 3 years; in 2021 only 58 percent of graduates took and passed the FAA mechanic exam.

When asked why graduates did not take the FAA mechanic test, the most often cited reason was “fear of testing.” Life distractions affected decision making more so in years previous, and more than a quarter of respondents cited high test costs and job offers that do not require mechanic certification as driving factors (Figure 11).

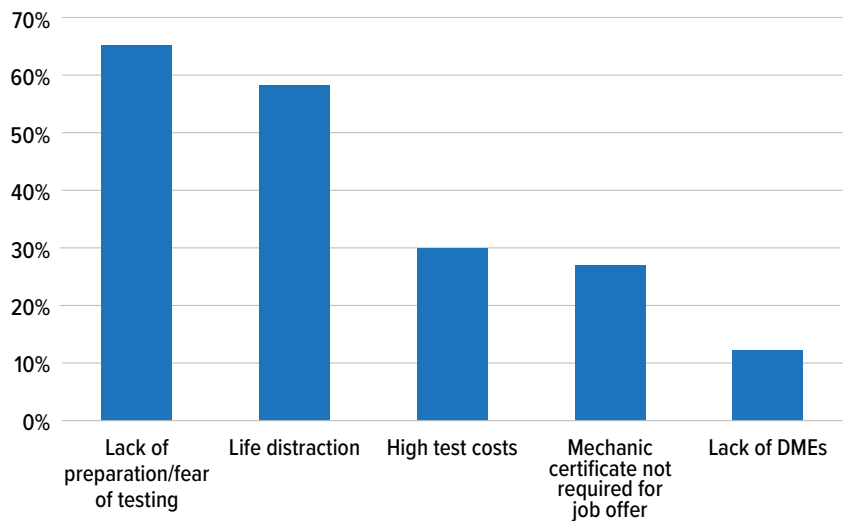

FIGURE 11:
Why don't AMTS students take the mechanic test?

Fewer programs cited lack of DME as a reason the students did not test, but the statistic does not take into account all the students who do test, despite the difficulties accessing testing in parts of the country with high testing demand.

The FAA designee database lists 254 DMEs. Last year, the FAA reported that DMEs conducted 9,416 original issue mechanic tests and that 67 percent, or around 6,348 of those tests, were given to AMTS students. Given that AMTS graduate around 7,500 mechanic candidates per year, the current DME population would need to increase testing by more than 1,000 tests per year if all AMTS students tested. Current testing capacity will therefore be a major bottleneck as enrollments and student testing increase without increasing the number of DMEs or their average testing rate.

GRADUATE EMPLOYERS

Of the aviation companies that are hiring, repair stations led the way, scooping up 31 percent of all aviation-employed A&P graduates, followed by regional airlines at 17 percent (Figure 12). The two industry sectors have long held the top employer spots for new entrants in aviation. Major passenger airlines came in third, but they are the fastest growing aviation employer segment for new mechanic entrants.

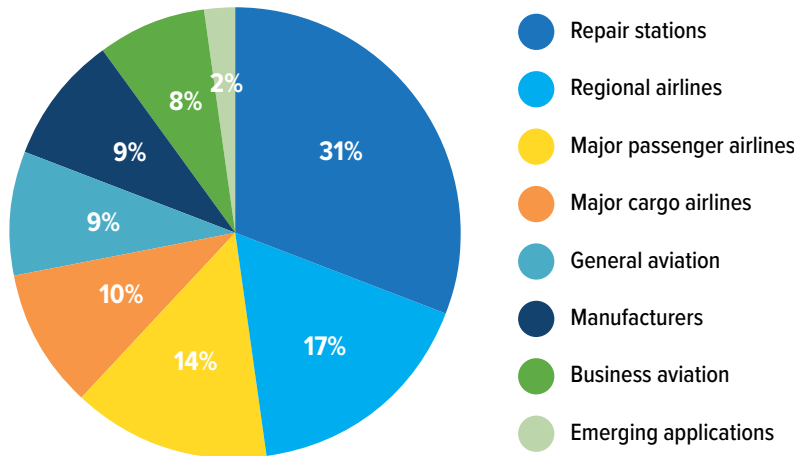

FIGURE 12:
What aviation sectors hired A&P graduates?

Survey respondents report an average starting hourly rate for AMTS alumni with an FAA certificate at \$25.49 per hour (or \$53,019 annually), an increase of 12 percent over last year and nearly 20 percent over the past 2 years.⁸

Starting hourly pay for graduates that did not obtain a mechanic certificate is one-third less than for their certificated peers, but that group also saw starting pay increase from \$14.41 to \$16.94 over the past 2 years.

The Bureau of Labor Statistics reports median pay for all aircraft mechanics and technicians—both certificated and non-certificated—at \$31.52 per hour, or \$65,562 annually.

	Entry level hourly rate: mechanic	Entry level hourly rate: non-certificated technician	Average hourly rate: aircraft and avionics equipment mechanics and technicians
2020	\$21.54	\$14.41	\$30.32
2021	\$22.36	\$16.93	\$32.06
2022	\$25.49	\$16.94	\$31.52

TABLE 2:
Mechanic Hourly Rates

STUDENT INVESTMENT

Tuition costs are not generally seen as a barrier to starting an aviation technical career, given the relatively low cost of A&P programs when compared to income potential.

ATEC research and analysis of published tuitions for all AMTS found **the average tuition for an A&P program is \$17,754**, or \$17,061 if the training comes with an associate’s degree. The rates are lower for public community colleges, with average tuition costs of \$9,769, or \$12,580 when paired with an associate’s degree.

The average time it takes for a student to complete an A&P program is 21 months, with six institutions reporting completion opportunities in 12 months or under.

⁸ Calculations assume a 40-hour work week at 52 weeks per year.

The EMPLOYER LINK

Scheduled in coordination with the
ATEC ANNUAL CONFERENCE, being held March 26–29, 2023.

Aviation Institute of Maintenance

3711 South Ashland Ave, Chicago, IL 60609

Tuesday, March 28, 2023

4 – 6pm

ATEC is the trade association representing aviation maintenance training schools around the U.S.

It's annual conference is a gathering of educators, administrators, recruiters and workforce development and training personnel from around the world. The Employer Link is an evening networking event, taking place during the ATEC Annual Conference, where employers have the opportunity to engage with A&P school administrators and instructors from across the country. **Space is limited, book early.**

Member employers may participate in the Employer Link through event sponsorship.
