

COVID-19 DISINFECTANT CLEANING

UCS is proud to offer a touch free application of an EPA approved quaternary disinfectant to all surfaces using a handheld misting device that completely covers all surfaces and is designed to effectively kill or neutralize any virus present. This method sprays a fine mist and will not damage or stain any surface. Using a handheld device instead of a fogger ensures that every surface is fully covered, and your residents can have peace of mind knowing that you have done your best to protect them.

All employees are trained in the process and have proper protective gear including Tyvek suits, respirators, gloves, and goggles.

Please note that although this is a recommended treatment per government advisories, even with the correct application of this disinfectant there is no guarantee that all virus molecules will be destroyed.

**Touch Free
Application**
