## Stay on Top of Regulatory Changes in HVAC

The U.S. heating, ventilation, air-conditioning, and refrigeration (HVAC) industry is currently undergoing a period of unprecedented change.

The pressures driving these changes – technological innovation in building design and energy conservation – are altering the U.S. market with resultant impacts on equipment and applications.

Come hear the most recent updates in HVAC changes going on in our industry including troubleshooting, diagnostics & repair, along with solutions to some of the new requirements.

Learn how to charge using Super heat and Sub-cooling and how to convert to Dew Point and Bubble Point that will be required for some of these new Refrigerants.

Attendees to this class should be: Service Team Members, Community Managers, Regional Managers, and anyone that will be affected by these changes.
