

To the nomination committee:

I received my Ph.D. in Mechanical Engineering in 2003 from the University of Kentucky. I joined the Mechanical Engineering Department as an assistant professor at Widener University in 2004. Later I became the department chair of the Biomedical Engineering Department at Widener University. I am now the founding director and professor of Biomedical Engineering Program at the West Chester University of Pennsylvania. The BME program is in the transition to an independent department.

I have been the treasure for the “International Society of Lyophilization – Freeze Drying --- ISLFD” for more than 10 years. I work closely with the society’s officers/directors, as well as the president to maintain a healthy financial status for ISLFD. I was also the treasure for several successful and well financially balanced ISLFD international conference in these years.

As the treasure of CoC, I will plan and keep the track of budgets within our committee. This may include but not limit to: ensure accurate and complete financial reporting and proper maintenance of financial records and information/tax returns; collect, deposit, and keep track of funds, write cheques, and provide financial reports regularly to fellow committee members.

With my long experience as the treasure of ISLFD, as well as my leadership skill, I am confident that I am a good candidate for the treasure of our committee.

Zhongping Huang, Ph.D.

Professor, Founding Director of Biomedical Engineering  
SECC 304
