

PUZZLED BY LEAN?

COAA'S OWNER TRAINING INSTITUTE® CAN HELP!

LEAN FOR OWNERS

Most facility/project Owners have a basic understanding of what Lean means but may not know enough to truly “speak the language,” understand which Lean strategies are best suited to a particular project or process improvement effort, and lead the team. Two of the industry’s leading organizations – COAA and LCI, the experts when it comes to Owners and Lean – have partnered to fill that knowledge void. This 1-day course will provide a broad overview of Lean tenets & fundamentals and equip attendees with the ability to implement at least three Lean techniques on their projects or within their organization. As with other COAA Owner Training Institute courses, learners will be led by a 3-person instructor team comprised of an Owner, design professional, and builder to ensure all perspectives are included.

Learning Objectives:

1. Gain fundamental knowledge of Lean philosophies, best practices, and tools applicable to improvement of both project delivery and internal operations.
2. Understand the value proposition and why Lean principles and methods can improve both project delivery and the project delivery experience.
3. Understand and become familiar with essential Lean tactical tools and practices, their purpose, benefits, and practical applications.
4. Become proficient in, and able to apply, three Lean practices within the learner’s organization or on the learner’s projects.

COURSE OUTLINE

1. Welcome/Introductions
2. History & Background | A3 Introduction
3. Principles
4. People
5. Practices
6. Conclusions
