

AVERAGE REVENUE PER KILOWATT-HOUR, 2024

AVERAGE REVENUE PER KILOWATT-HOUR REPORT

FEBRUARY 2026

PREPARED BY

Kevin Tillmann, Manager, Research and Statistics
American Public Power Association

The American Public Power Association is the voice of not-for-profit, community-owned utilities that power approximately 2,000 towns and cities nationwide. We represent public power before the federal government to protect the interests of the more than 55 million people that public power utilities serve across the United States and its territories. We advise on electricity policy, grid technology and operations, and workforce development in support of safe, modern, and resilient utilities.

Powering Strong Communities

ABOUT THIS REPORT

We are pleased to present the summary report of average revenue per kilowatt-hour for U.S. electric utilities for calendar year 2024. The report contains state averages by type of ownership, as well as individual averages for each utility in the country.

Public power utilities often offer the most affordable rates compared to other utility types. In 35 out of 45 states with comparable data, public power customers have the lowest average residential rates. Nationwide, the average residential rates for public power utility customers were 17% lower than investor-owned utility residential rates.

Note that the report showing each utility's average revenue per kilowatt-hour covers full-service sales only, so average values for states with retail choice do not include sales to customers that purchase power from alternate energy suppliers. The national average rates for alternate energy supplier sales in states that have retail choice are higher than the average rates for full service customers. The average residential retail choice rate is nearly 60% higher than the average full-service residential rate.

The American Public Power Association calculated the revenue per kilowatt-hour from 2024 data reported by each utility to the Energy Information Administration on Form EIA-861 (and on Form EIA-861S for smaller utilities). These calculations can help you compare your average rate with other utilities in your state.

Please note that beginning with 2020 data, EIA increased the size threshold for utilities to complete the shorter Form EIA-861S. On this form, utilities do not need to report sales for each rate class and thus report only total revenue and sales. Nearly three-quarters of all public power utilities complete the short form; therefore, residential, commercial, and industrial rates are not available for these utilities, as well as for the nearly 300 rural electric cooperatives who complete the shorter form. Utilities with less than 200,000 megawatt-hours in sales are required to complete the detailed Form EIA-861 every eight years. The next year that small utilities are required to complete EIA-861 is 2027.

Public power customers had the lowest average total rate in 35 states.

Utilities reporting data on EIA-861S are indicated throughout the tables in the report in italics. Note that state averages for residential, commercial, and industrial rates do not include utilities that complete the short form. State total averages include all utilities.

If you have any questions or would like data from this report as an excel spreadsheet, please contact our team at (202) 467-2920 or Statistics@PublicPower.org.

The average public power residential rate was 17% lower than the IOU residential rate in 2024.

TABLE OF CONTENTS

This report contains data for each state and averages for unbundled sales.

*Major investor-owned utilities in the ERCOT region of Texas offer retail choice and do not report sales or revenue to ultimate customers. Their customers are considered full-service customers of retail electric providers (REPs), which are classified by the Energy Information Administration as power marketers. The REPs bill customers for full service and then pay the IOU for the delivery portion.
