

# AVERAGE REVENUE PER KILOWATT-HOUR, 2023

---

**PREPARED BY**

Lindsey Buttel, Manager, Research and Statistics  
American Public Power Association

The American Public Power Association is the voice of not-for-profit, community-owned utilities that power approximately 2,000 towns and cities nationwide. We represent public power before the federal government to protect the interests of the 55 million people that public power utilities serve across the United States and its territories. We advise on electricity policy, grid technology and operations, and workforce development in support of safe, modern, and resilient utilities.

## ABOUT THIS REPORT

We are pleased to present the summary report of average revenue per kilowatt-hour for U.S. electric utilities for calendar year 2023. The report contains state averages by type of ownership, as well as individual averages for each utility in the country.

In 35 out of 49 states with comparable data, public power customers have the lowest average total rates, and in 34 out of 45 states with comparable data, public power customers have the lowest average residential rates. Nationwide, residential rates increased 7.2% between 2022 and 2023, however, the increase is primarily led by investor-owned utilities, whose residential rates increased 8.4% compared to the rates of cooperatives (0.9% increase) and public power utilities (0.1% increase).

Note that the report showing each utility's average revenue per kilowatt-hour covers full-service sales only, so average values for states with retail choice do not include sales to customers that purchase power from alternate energy suppliers. To see rates for alternate energy supplier sales in states that have retail choice, please see the final section, "Unbundled Sales." This also contains national averages for bundled, unbundled, and total rates.

The American Public Power Association calculated the revenue per kilowatt-hour from 2023 data reported by each utility to the Energy Information Administration on Form EIA-861 (and on Form EIA-861S for smaller utilities). These calculations can help you compare your average rate with other utilities in your state.

Please note that beginning with 2020 data, EIA increased the size threshold for utilities to complete the shorter Form EIA-861S. On this form, utilities do not need to report sales for each distinct rate class, and thus report only total revenue and sales. Nearly three-quarters of all public power utilities complete the short form; therefore, residential, commercial, and industrial rates are not available for these utilities, as

---

**Public power customers had the lowest average total rate in 35 states.**

---

well as for the nearly 300 rural electric cooperatives who complete the shorter form. Utilities with less than 200,000 megawatt-hours in sales are required to complete the detailed Form EIA-861 every eight years. The next year that small utilities are required to complete EIA-861 is 2027.

Utilities reporting data on EIA-861S are indicated throughout the tables in the report in italics. Note that state averages for residential, commercial, and industrial rates do not include utilities that complete the short form. Starting this year, state total averages represent all utilities and are calculated using data from both the full and short form. Historically, EIA-861S data was not used to compute the state total averages.

If you have any questions or would like data from this report as an excel spreadsheet, please contact our team at (202) 467-2920 or [Statistics@PublicPower.org](mailto:Statistics@PublicPower.org).

---

**The average public power residential rate was 20% lower than the IOU residential rate in 2023.**

---

Source: U.S. Department of Energy, Energy Information Administration, Form EIA-861 and EIA-861S, 2023 data.

Data for EIA-861 utilities represent full-service ("Bundled") sales only. See "Unbundled Sales" for unbundled rates. Data for EIA-861S utilities contain all sales to ultimate customers. Italicized rows represent utilities that completed EIA-861S. Only total Rev/kWh is available for these utilities.

State averages for residential, commercial, and industrial data include only utilities that report data on Form EIA-861 (long form). State total averages include all utilities.

\*Major investor-owned utilities in the ERCOT region of Texas offer retail choice and no longer report sales or revenue to ultimate customers. Their customers are considered full-service customers of retail electric providers (REPs), which are classified by the Energy Information Administration as power marketers. The REPs bill customers for full service and then pay the IOU for the delivery portion.
