

# AVERAGE REVENUE PER KILOWATT-HOUR, 2022

APRIL 2024

---

## **Prepared by**

Lindsey Buttel, Manager, Research and Statistics  
American Public Power Association

The American Public Power Association is the voice of not-for-profit, community-owned utilities that power roughly 2,000 towns and cities nationwide. We represent public power before the federal government to protect the interests of the more than 54 million people that public power utilities serve, and the 96,000 people they employ.

## About This Report

We are pleased to present the summary report of average revenue per kilowatt-hour for U.S. electric utilities for calendar year 2022. The report contains state averages by type of ownership, as well as individual averages for each utility in the country.

Nationwide, the simulated average residential bills for public power utility customers were 7% lower than investor-owned utility residential bills, and 22% lower than cooperative bills. In 34 out of 45 states with comparable data, public power customers have the lowest average residential rate. Public power utilities had the lowest overall average rate in 32 states in 2022.

Note that the report showing each utility's average revenue per kilowatt-hour covers full-service sales only, so average values for states with retail choice do not include sales to customers that purchase power from alternate energy suppliers. To see rates for alternate energy supplier sales in states that have retail choice, please see the final section, "Unbundled Sales." This also contains national averages for bundled, unbundled, and total rates.

The American Public Power Association calculated the revenue per kilowatt-hour from 2022 data reported by each utility to the Energy Information Administration on Form EIA-861 (and on Form EIA-861S for smaller utilities). These calculations can help you compare your average rate with other utilities in your state.

Please note that beginning with 2020 data, EIA increased the size threshold for utilities to complete the shorter Form EIA-861S. On this form, utilities do not need to report sales for each distinct rate class, and thus report only total revenue and sales. Nearly three-quarters of all public power utilities complete the short form; therefore, residential, commercial, and industrial rates are not available for these utilities, as well as for the nearly 300 rural electric cooperatives who complete the shorter form. Utilities reporting data on EIA-861S are highlighted throughout the tables in the report in yellow. Note that state averages do not include utilities that complete the short form.

If you have any questions or would like data from this report as an excel spreadsheet, please contact our team at (202) 467-2920 or [Statistics@PublicPower.org](mailto:Statistics@PublicPower.org).
