Alpine Communications

Expert in joint-use attachments, managing 2M+ poles nationwide and permitting 1000+ weekly. Offers turnkey services: permit admin, pole audits, and engineering for utilities & telecom.

Primary contact Blake Dillon

Mobile number (402) 517-1886

Email address bdillon@alpinecc.us

Website www.alpinecommunication.com

Services available

Damage assessors ☒

Telecommunications support ☒

Other Joint Use Audit, Joint Use Permit Administration,
Distribution Audit, Make Ready Engineering

Equipment/trucks available Pole Analysis & Engineering software

Departure/traveling from Ormond Beach, FL

Optional additional information

Alpine Communications indirectly supports efficient storm recovery through a two-pronged approach. Proactively, they digitize attachments, identify risks, and manage permits for utility poles *before* storms, establishing a clear infrastructure baseline for faster damage assessment and enhanced crew safety. Post-storm, their audit services can quickly verify the integrity of remaining attachments, identify any new unauthorized or unsafe conditions arising from the event, and reconcile billing based on the post-storm landscape. This pairing of proactive management and post-storm auditing ensures a comprehensive understanding of pole infrastructure both before and after severe weather impacts, ultimately contributing to a more organized and potentially accelerated restoration process for utilities and telecom providers in Florida and surrounding states.

American Wire Group

AWG is a leading supplier of wire, cable, hardware, and equipment for utility and renewable energy markets. With four regional centers, we deliver high-quality products, expert services, and timely solutions worldwide.

Primary contact Michael Blaha

Mobile number 203-915-6416

Email address sales@buyawg.com

Emergency contact number 954-455-3050

Services available

Other Wire & Cable, Hardware, Accessories, Poles & Pole Line

Optional additional information

In the aftermath of disasters—storms, hurricanes, earthquakes, fires, or other emergencies causing service interruptions—our team provides immediate, 24/7 material support. With an extensive inventory of wire, cable, and electrical accessories, we work around the clock to assist in full recovery efforts until power is restored. AWG also specializes in custom cables and hard-to-find items, helping emergency response teams quickly source critical components.

Bailey & Bailey Power Distribution, LLC

B&B Power is a SAM.gov certified small business. We are a full-service union contractor that specializes in overhead and underground distribution storm restoration. B&B Power is registered on FEMA's Disaster Response Registry. We prioritize safety and bring honesty and integrity to the contractor experience.

Primary contact	Joey Bailey

E.C. Fennell, Inc.

E. C. Fennell, Inc is an engineering and consulting company headquartered in West Palm Beach, Florida. ECF provides engineering consultation and technical solutions to a number of utility clients. ECF's core business is to serve Utility Companies, Private Development Projects, and Public Municipal Agencies on an array of projects. Our expertise is in energy consulting, building systems engineering design, and construction administration. Our services are tailored to meet industry guidelines, technological advances, and, most importantly, client, project, and system needs.

Departure/traveling from South Florida/Georgia

Optional additional information

Several ECF staff members have over 30 years of storm experience and have played a key role in restoration efforts with FPL and other utilities. Over the years, ECF has developed deep expertise in managing large-scale storm recovery, offering critical support during some of the most severe weather events. Our experienced team has consistently been on the front lines, assisting with damage assessments, power restoration, and coordinating recovery efforts across multiple states. By deploying skilled personnel and leveraging advanced technology, ECF ensures that utilities can respond quickly and effectively, minimizing disruption and restoring power to affected communities.

Excellence—Every project. Every day.

Enercon Services, Inc., headquartered near Atlanta, Georgia, is a multi-disciplinary engineering and environmental services firm specializing in the power and industrial sectors.

Primary contact	Edward Wallace

Total number of personnel available	100
Equipment/trucks available	50
Voltage classes	All
Departure/traveling from	Orlando, FL; Tampa, FL; Palm Beach Gardens, FL; Pensacola, FL; Atlanta, GA
Optional additional information	<p>ENERCON has an experienced team of professionals with comprehensive experience in Damage Assessment Services. ENERCON has an excellent track record of providing quick responses to damage assessment requests working for some of the largest utilities in Florida. Our Power Delivery team provides distribution, transmission and substation engineering services to electric utilities across the country, so our damage assessment teams are highly trained in facility identification and damage reporting. ENERCON has several offices across Florida which allow for quick deployment of resources from multiple locations. Since we utilize our engineering resources as damage assessors and pair them with drivers, we can organize damage assessment teams in large quantities for multiple clients affected by the same storm event. While hurricanes are most problematic in Florida, severe storms and tornadoes can pop up at any time as was recently experienced in Tallahassee in 2024. Our teams stand ready to support our clients with critical first response damage assessment teams year-round.</p>

Damage assessors ☒

Total number of line crews available	Up to 20 per event, subject to other commitments
Typical crew makeup	1 driver per vehicle with mounted, automated inspection
Total number of personnel available	Up to 20 per event
Equipment/trucks available	Up to 20 light-duty vehicles equipped with AI-enabled inspection cameras per event
Departure/traveling from	Regional with access to hundreds of locations in Florida and the surrounding states.

Optional additional information	<p>Noteworthy AI provides autonomous, vehicle-mounted inspection technology that enables utilities to rapidly scale damage assessments after major storms. Our AI-enabled camera systems automatically detect and classify common damage—such as leaning poles, broken crossarms, damaged transformers, and open cutouts—while vehicles patrol feeders and laterals continuously at the posted speed limit.</p> <p>This approach allows utilities to inspect 5–10 times more poles per hour compared to conventional two-person patrol crews that must stop and record damage manually. Each defect is geotagged, documented with imagery, and delivered in near real-time to command center systems of record. When cellular networks are down, inspection results are transmitted via Starlink satellite connectivity to ensure uninterrupted situational awareness.</p> <p>By combining speed, scalability, and resilient communications, Noteworthy AI enables municipal and cooperative utilities to gain faster visibility into storm impacts, prioritize restoration more effectively, and reduce overall inspection costs.</p>

OneSource Restoration

*ATK Energy Group is the new parent company of OneSource Restoration, Victory Powerline Services, Kent Utility Services and StratiK. Creating this holding company will allow us to continue to offer exceptional service to the electric utility industry while expanding and diversifying our family of companies. At **OneSource Restoration (OSR)**, we know storms test our readiness to restore power safely and efficiently. OSR believes in preparing for the inevitable storm event and we can certainly be there to assist if “the big one” hits your area.*

Services available

Other FEMA Public Assistance Consulting, Emergency Response, Grants and Program Management, Environmental Planning & Historic Preservation, State & Federal Agency Coordination.

Optional additional information

The key to successful delivery of grant management services is the breadth and depth of our team. Our collective knowledge of the intricacies presented by the Federal and State recovery landscape and specific expertise in consulting and managing storm recovery grant programs has resulted in a proven track record of success.

Our proven performance across a broad spectrum of disaster response and hazard mitigation activities demonstrates a deep understanding of federal and state grant policies, procedures, and processes. We recognize that restoration or replacement to pre-storm conditions without mitigation can leave infrastructure susceptible to future storm damage and potentially limit future funding, so we have developed innovative methods to maximize funding for complex projects to restore infrastructure and to build for a resilient future.

At Royal, we are committed to making the communities we serve stronger and more resilient.

SAM

SAM is a national leader in geospatial solutions. We help organizations manage infrastructure, improve asset monitoring, and make data-driven decisions with precision and efficiency across diverse industries.
