

LOUISIANA INDUSTRY ON THE GEAUX

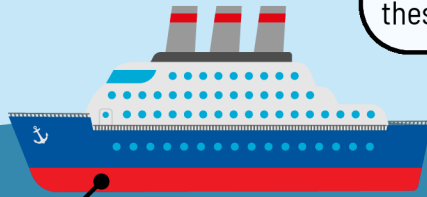

PLANES

Planes carry passengers worldwide, powered by **jet fuel** produced by your local industry. Lightweight carbon fiber wings, made with **epoxy resin** from Hexion and Olin, help keep these aircraft in the sky.

SHIPS

Cruise ships are able to set sail thanks to **diesel fuel** produced by your local industry. **PVC** from Shintech is used to create a non-slip, water-resistant coating for ship decks, crucial when you're out at sea!

TRAINS

Railways are protected from rust thanks to **corrosion inhibitors** made by BASF. **Polyethylene**, produced by Shell, is used in train interiors to create durable, lightweight plastics for seats, panels, and flooring to ensure passenger comfort.

ROADS

Asphalt, created by Phillip 66, is used to make durable, long lasting roads that can withstand the extreme weather and heat that Louisiana is known for. **Paint** used to line roads and keep you in your lane is made by Dow.

CARS

Methanol from Methanex is used to make lightweight plastic car panels to boost fuel efficiency. Tires keep cars rolling smoothly on the road thanks to **silica** from PPG.
