## Steam Inlet Expansion Joints

(LP TURBINE EXHAUST / STEAM SURFACE CONDENSER)

The placement of an expansion joint between the low pressure turbine exhaust and the condenser is often required to absorb the thermal movements of both the condenser and the turbine. The expansion joint minimizes loads being applied to the exhaust casing and keeps stresses within acceptable limits. Occasionally, turbine suppliers may permit other options such as solid attachment that eliminates the expansion joint but can result in a spring supported condenser. When an expansion joint is specified there are a number of criteria that must be provided to ensure adequate design.

- Design Pressure Full Vacuum to 15 psig
- Design Temperature Ambient to 212 deg F
- Internal flow liner requirements
- Size
- Movements (axial and lateral)
- Materials of Construction
- Connection to turbine and condenser (welded , bolted)
- Loads (allowable loads)

There are several popular type expansion joints that are used in this application. The most common are:

- Rubber belt**
- Stainless steel bellows**
- Rubber “U”**

The selection is most often driven by a strong customer preference, however, each expansion joint has characteristics that can influence the final selection. The following chart can assist with this evaluation.

	<b>Rubber belt</b>	<b>Stainless steel</b>	<b>Rubber U</b>
<b>Axial spring rate</b>	LOW	LOW	LOW
<b>Lateral spring rate</b>	LOW	HIGH	LOW
<b>Expected material life</b>	LIMITED	LONG	LIMITED
<b>Installation type</b>	BOLTED	WELDED	BOLTED
<b>Temperature</b>	LIMITED	HIGH	LIMITED
<b>Air leakage possibilities</b>	MEDIUM	LOW	MEDIUM
<b>Ease of maintenance/ Replacement</b>	MEDIUM	HIGH	MEDIUM

Please refer to the latest edition of the Heat Exchange Institute Standards for Steam Surface Condensers for more information.

This Tech Sheet was developed by the members of the Heat Exchange Institute’s (HEI) Condenser Section. HEI is a trade association comprising the leading manufacturers of heat exchange and vacuum equipment. HEI Tech Sheets are information tools and should not be used as substitutes for instructions from individual manufacturers. Always consult with individual manufacturers for specific instructions regarding their equipment.
