

Brian Bovard is an Associate Professor of Ecology & Environmental Studies and Associate Dean in The Water School at Florida Gulf Coast University. His work focuses on wetland and coastal ecosystems, with particular emphasis on mangroves, forested wetlands, and nature-based solutions for climate adaptation and coastal resilience. Brian's research integrates field ecology, remote sensing, and community-engaged science, often in collaboration with tribal communities, conservation organizations, and regional partners. He is deeply committed to experiential education, mentoring undergraduate and graduate researchers, and connecting science to real-world environmental decision-making.
