BRONZE

EXHIBITOR

Welcome from the President

Dear Colleagues,

Welcome to the 2026 MAPA Fall CME Conference! It's wonderful to be back at the Grand Traverse Resort and Spa with colleagues from across Michigan. As our conference continues to grow, we're excited to gather in a venue that allows us to learn, connect, and celebrate our profession together.

The MAPA CME Committee has created an outstanding educational program featuring clinical updates, professional development, and three new and improved workshops offering valuable, hands-on learning opportunities. Many sessions will also be recorded, giving you the flexibility to learn on your own schedule.

This conference is about more than CME—it's about connection. Join us for the Welcome Reception, University Receptions, MAPA Awards Celebration, Quiz Bowl, and opportunities throughout the weekend to engage with fellow PAs. Be sure to visit the Exhibit Hall and attend the Product Theaters, made possible through the generous support of our exhibitors and sponsors.

Thank you for being part of MAPA and for your commitment to advancing the PA profession. A special thank-you goes to our CME Committee, volunteers, and speakers for their dedication to making this conference possible.

I hope you have a rewarding, inspiring, and enjoyable conference!

People. Passion. Possibilities.®

AbbVie is driving the pursuit of improved mental health.

Over the last 30 years, AbbVie's scientists and clinicians have worked to tackle the complexity of mental illness, and today, AbbVie offers medicines to treat various mental health disorders including major depressive disorder, bipolar I disorder, and schizophrenia.

Forging connections with healthcare professionals and organizations is how we deliver meaningful partnerships founded on a common goal: to help treat and support patients throughout their mental health journey.

Your trusted noninvasive test just got better^{1,2}

Offering the **Cologuard Plus™** test is the best first step in CRC screening^{2,3}

Based on USPSTF-recommended screening modalities.

CRC sensitivity comparable to colonoscopy^{2,4*}
(95% according to the USPSTF review)

High adherence with the Cologuard® test at 71%³

Better outcomes with an estimated 73% reduction in CRC cases^{5†}

Broad coverage for over 96% of patients^{6‡}

Scan for performance data

**COLOGUARD1ST.
COLONOSCOPYASNEEDED.**
FOR AVERAGE-RISK PATIENTS 45 AND OLDER.

**Belinda Khou | PA
Dr Chuck Vega | MD**

Providers have been compensated for sharing their expertise and consulting for Exact Sciences.

Important Information about the Cologuard products

Indications for Use

The Cologuard® and Cologuard Plus™ tests are intended for the qualitative detection of colorectal neoplasia associated DNA markers and for the presence of occult hemoglobin in human stool. A positive result may indicate the presence of colorectal cancer (CRC) or advanced adenoma (AA)/advanced precancerous lesions (APL) and should be followed by a colonoscopy. The Cologuard test and Cologuard Plus test are indicated to screen adults of either sex, 45 years or older, who are at average risk for CRC. These tests are not a replacement for diagnostic colonoscopy or surveillance colonoscopy in high-risk individuals.

Contraindications

The Cologuard products are not for high-risk individuals, including patients who have the following:

- a personal history of colorectal cancer and adenomas
- a positive result from another colorectal cancer screening method within a test recommended timeframe
- have been diagnosed with a condition associated with high risk for colorectal cancer such as IBD, chronic ulcerative colitis, Crohn's disease
- have a family history of colorectal cancer, or certain hereditary syndromes

Warnings and Precautions

All positive results should be referred to colonoscopy.

The Cologuard products may produce false positive and false negative results. A false positive result occurs when a result is positive, even though a colonoscopy will not find CRC or APL. A false negative result occurs when a result is negative, even when a colonoscopy identifies APL or CRC.

A negative result does not guarantee the absence of colorectal cancer or advanced adenoma. Following a negative result, patients should continue participating in a screening program at an interval and with a method appropriate for the individual patient. Performance when used for repeat testing has not been established.

Refer to the Cologuard test Clinician Brochure (cologuardhcp.com/cologuard-brochure) or the Cologuard Plus test Clinician Brochure (cologuardhcp.com/cologuard-plus-brochure) for additional information about the benefits and risks of using each version of the Cologuard product for CRC screening.

Rx only.

*Cologuard Plus CRC sensitivity was demonstrated in a subset of 18,911 average-risk patients aged 45 to 84 years from a prospective, multicenter study. Screening colonoscopy was the reference method. Colonoscopy CRC sensitivity is based on a USPSTF review of 4 separate studies (n=4821).^{2,4}

†Based on a simulated CRC-SPIN model that compared screening with a colonoscopy at a 10-year interval and the Cologuard Plus test at a 3-year interval and assumed perfect adherence in patients aged 45-85 years.⁵

‡Exact Sciences estimate based on historical patient billing as of November 2024. Exceptions for coverage may apply, only your patients' insurers can confirm how the Cologuard test would be covered.⁶

CRC=colorectal cancer; CRC-SPIN=Colorectal Cancer Simulated Population model for Incidence and Natural history; USPSTF=United States Preventive Services Task Force.
