EXHIBITORS

Welcome from the President

Dear Colleagues,

Welcome to the 2024 MAPA Fall CME Conference! We are back at the Grand Traverse Resort and Spa, a venue that consistently rolls out the red carpet for us. There's no better place to connect with fellow Michigan PAs while earning valuable CME credits. On behalf of MAPA leadership, we are honored that you've chosen to join us.

The MAPA CME Committee has put together an outstanding program that reflects our academy's mission of providing essential resources for PAs in Michigan and empowering members to be advocates for the profession. The conference consists of high-caliber CME sessions across concurrent hot topics, PANRE, professional development, as well as student tracks. Most CME sessions will be recorded giving you access to the on-demand lectures to watch in the convenience of your own home at your own pace. Please consult the program for details.

Make sure you don't miss conference events including our festive welcome reception, informative product theaters, engaging exhibits, and celebrating your colleagues at the awards celebration. Be sure you come prepared to cheer on our students at the annual quiz bowl with our fun "under the sea" theme! If you wish to further enhance your conference experience, there may still be room in our hands-on workshops and private wine tour. Ask at the registration desk for details.

Thank you for participating and supporting the academy by joining us at the 2024 MAPA Fall CME Conference. If you're enjoying the conference and have an idea or would like to see different activities, please don't hesitate to reach out to one of MAPA's many leaders in person or after the conference to help get you connected. Now is the best time to get started on being an active member within MAPA's formal organization. If you're passionate about maintaining PA's scope of practice, help with our legislative efforts and donate to the PAMPAC. Doing so allows MAPA to continue to be a voice in the legislative space and community.

Please join me in extending my most heartfelt thanks to the members of the CME Committee for their time, energy, and expertise in putting together a spectacular lineup of speakers and topics for MAPA 2024.

Have a fantastic time!

Best,

Rebecca Cronin, MA, MSM, PA-C

Ron Stavale, PA-C

Heather Trudeau, MPAS, PA-C, DFAAPA

PARTNER IN ASTHMA CARE, PARTNER IN ASTHMA RELIEF

INDICATION & IMPORTANT SAFETY INFORMATION

INDICATION

DUPIXENT is indicated as an add-on maintenance treatment of adult and pediatric patients aged 6 years and older with moderate-to-severe asthma characterized by an eosinophilic phenotype or with oral corticosteroid dependent asthma. Limitation of Use: DUXENT is not indicated for the relief of acute bronchospasm or status asthmaticus.

IMPORTANT SAFETY INFORMATION

CONTRAINDICATION: DUXENT is contraindicated in patients with known hypersensitivity to dupilumab or any of its excipients.

Please see additional Important Safety Information below.

PRESENTED BY:

Kathleen Dass, MD
CEO and Medical Director
Michigan Allergy, Asthma and
Immunology Center
Oak Park, MI

Friday, October 11, 2024
11:50 AM - 12:50 PM ET
Governors' CD Ballroom
The Grand Traverse Resort
Acme, MI

IMPORTANT SAFETY INFORMATION, CONTINUED

WARNINGS AND PRECAUTIONS

Hypersensitivity: Hypersensitivity reactions, including anaphylaxis, serum sickness or serum sickness-like reactions, angioedema, generalized urticaria, rash, erythema nodosum, and erythema multiforme have been reported. If a clinically significant hypersensitivity reaction occurs, institute appropriate therapy and discontinue DUXENT.

Eosinophilic Conditions: Patients being treated for asthma may present with serious systemic eosinophilia sometimes presenting with clinical features of eosinophilic pneumonia or vasculitis consistent with eosinophilic granulomatosis with polyangiitis (EGPA), conditions which are often treated with systemic corticosteroid therapy. These events may be associated with the reduction of oral corticosteroid therapy. Healthcare providers should be alert to vasculitic rash, worsening pulmonary symptoms, cardiac complications, and/or neuropathy presenting in their patients with eosinophilia. Cases of eosinophilic pneumonia were reported in adult subjects who participated in the asthma development program and cases of vasculitis consistent with EGPA have been reported with DUXENT in adult subjects who participated in the asthma development program as well as in adult subjects with co-morbid asthma in the chronic rhinosinusitis with nasal polyposis development program. A causal association between DUXENT and these conditions has not been established.

Acute Asthma Symptoms or Deteriorating Disease: Do not use DUXENT to treat acute asthma symptoms, acute exacerbations, acute bronchospasm or status asthmaticus. Patients should seek medical advice if their asthma remains uncontrolled or worsens after initiation of DUXENT.

Risk Associated with Abrupt Reduction of Corticosteroid Dosage: Do not discontinue systemic, topical, or inhaled corticosteroids abruptly upon initiation of DUXENT. Reductions in corticosteroid dose, if appropriate, should be gradual and performed under the direct supervision of a healthcare provider. Reduction in corticosteroid dose may be associated with systemic withdrawal symptoms and/or unmask conditions previously suppressed by systemic corticosteroid therapy.

Arthralgia: Arthralgia has been reported with use of DUXENT with some patients reporting gait disturbances or decreased mobility associated with joint symptoms; some cases resulted in hospitalization. Advise patients to report new onset or worsening joint symptoms. If the symptoms persist or worsen, consider rheumatological evaluation and/or discontinuation of DUXENT.

Parasitic (Helminth) Infections: It is unknown if DUXENT will influence the immune response against helminth infections. Treat patients with pre-existing helminth infections before initiating therapy with DUXENT. If patients become infected while receiving treatment with DUXENT and do not respond to anti-helminth treatment, discontinue treatment with DUXENT until the infection resolves. Helminth infections (5 cases of enterobiasis and 1 case of ascariasis) were reported in pediatric patients 6 to 11 years old in the pediatric asthma development program.

Vaccinations: Consider completing all age-appropriate vaccinations as recommended by current immunization guidelines prior to initiating DUXENT. Avoid use of live vaccines during treatment with DUXENT.

ADVERSE REACTIONS: The most common adverse reactions (incidence $\geq 1\%$) in patients with asthma are injection site reactions, oropharyngeal pain, and eosinophilia.

USE IN SPECIFIC POPULATIONS

- Pregnancy:** A pregnancy exposure registry monitors pregnancy outcomes in women exposed to DUXENT during pregnancy. To enroll or obtain information call 1-877-311-8972 or go to <https://mothertobaby.org/ongoing-study/dupixent/>. Available data from case reports and case series with DUXENT use in pregnant women have not identified a drug-associated risk of major birth defects, miscarriage or adverse maternal or fetal outcomes. Human IgG antibodies are known to cross the placental barrier; therefore, DUXENT may be transmitted from the mother to the developing fetus.
- Lactation:** There are no data on the presence of DUXENT in human milk, the effects on the breastfed infant, or the effects on milk production. Maternal IgG is known to be present in human milk. The developmental and health benefits of breastfeeding should be considered along with the mother's clinical need for DUXENT and any potential adverse effects on the breastfed child from DUXENT or from the underlying maternal condition.

Please see accompanying full **Prescribing Information**.

This is a non-CME event sponsored by Sanofi & Regeneron. It is neither sponsored by nor endorsed by the Michigan Academy of Physician Associates.

CONGRATULATIONS TO MAPA'S 2024 AWARD RECIPIENTS!
