A MESSAGE FOR OUR FRIENDS

Karleen Kos
CEO, MMUA

Over the past three years at MMUA, we've done a lot of work to take things to the next level. You might say our strategic plan has been the transformer—and we are energized! With the support of MMUA's members, the staff and volunteers have been empowered to make changes that position the Association to grow and lead for years to come. Thank you. With your help and the engagement of our Board of Directors, we have worked hard and been creative in searching for ways to bring you better services and representation while improving our operational processes. As we enter into the second half of this decade, MMUA has the systems in place to deliver what members need from the classroom to the Capitol.

But the work isn't done yet—not even close. We will continue to expand our offerings so every utility employee can benefit and learn through our programs. We will find new ways to help you articulate the unique value of hometown utilities to your communities. We will fight to protect the municipal model in St. Paul and beyond. Really, the hard work has only just begun.

It's a pleasure to serve the people of Minnesota alongside you. Thank you for supporting our mission!

MMUA strategic plan

MMUA unveiled a new strategic plan in 2022 with the goal of enhancing our leadership position and fostering growth while focusing intently on the needs of municipal utilities. The plan features five strategic pillars to guide the work of our organization through 2027. This annual report is organized to represent what we have done to honor those pillars in 2023–24. The strategic pillars are listed below.

- Effective Public Policy Advocacy
- Strategic Preservation of Local Control
- Best-in-Class Programs and Services
- Excellence in Member Benefits
- Efficient Association Operations

MMUA's strategic plan focuses on strengthening public policy advocacy by prioritizing state-level utility initiatives, partnering with allied organizations for joint policy influence, and creating a resource library for municipal utility leaders. Additionally, MMUA hosts regional meetings and develops educational materials to deepen understanding of emerging policy issues. Here are some efforts MMUA made this year toward these goals.

Key legislative messages

- **Hometown utilities are reliable, affordable, and sustainable.** Municipal utilities provide excellent services responsibly and reliably, directly to their communities.
- **We are Main Street not Wall Street.** The municipal utility model keeps profits within the community.
- **Municipal utilities are different than investor-owned utilities and cooperatives.** While we share many objectives with our counterparts, municipal utilities have different needs and capabilities than other utility companies—one size does not fit all.

MMUA's Kent Sulem testifies before the House Climate and Energy Finance and Policy Committee alongside Representative Patty Acomb.

Interacting on the Issues

The MMUA Government Relations team hosted another series of gatherings for utility leaders, commissioners, and council members in 2024.

The meetings covered implications of the legislative session and other hot topics related to strengthening municipal utilities.

Virtual Legislative Conference

The only major winter storm of 2024 forced MMUA's Legislative Conference into a virtual environment this year. Over the course of the two days, participants heard from the Government Relations team as well as from the two scheduled keynote speakers, Dr. Pete Wyckoff of the Minnesota Department of Commerce Division of Energy and Mark Teklinski of the Midwest Renewable Energy Tracking System.

MMUA's five-year strategic plan is dedicated to preserving local control of utility services. Key goals include championing reliability, affordability, and sustainability within the municipal model, improving communications to underscore the benefits of local ownership, offering educational resources to enhance customer relations, and empowering local leaders to advocate for their hometown utilities.

MMUA members advocating for hometown utilities with Senator Amy Klobuchar's staff in Washington, DC.

New resource: Model resolution for requiring a referendum

MMUA introduced a document to help communities organize around the issue of utility sales. In recent years, four Minnesota municipal utilities were sold without a required referendum. State law mandates a two-thirds affirmative vote from the community for such sales or closures, but this has not been enforced.

MMUA believes early awareness of referendum requirements empowers citizens in municipal cities. MMUA's model resolution provides a locally binding process that requires a two-thirds community vote before any sale or closure.

New service: Strategic planning consulting

Many utilities excel in financial and capital expenditure planning but may overlook holistic organizational planning for the future. MMUA offers tailored assistance for comprehensive utility planning, covering areas like community relations, education, workforce development, and sustainability.

Our services include research, data analysis, planning session facilitation, and the creation of customized strategic plans. We also help translate these plans into operational objectives with measurable outcomes.

MMUA's strategic plan outlines five-year goals for advancing municipal utilities employees' excellence, safety, and proficiency. This includes updating safety and training programs, enhancing communication and evaluation tools, tailoring services to diverse utility needs, collaborating with partner organizations, and establishing a capital replacement process for facilities to align with mission requirements.

Zero blackouts

After restructuring the Safety Management Program in 2022, MMUA has focused on eliminating gaps in program coverage due to staffing changes or other emergency circumstances. This year, MMUA added the Field Safety Services Coordinator position, whose role has been designed to ensure MMUA can fill gaps as needed. Other staff members have gained new skills so they can step into openings when necessary.

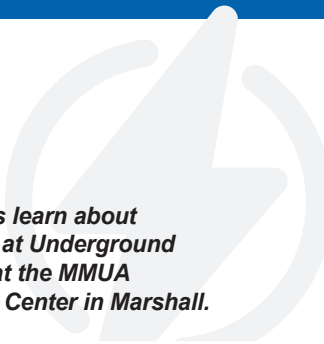

These steps provide program flexibility and responsiveness without compromising training and consulting time for participants. As a result, MMUA proudly reports “zero blackouts” in the Safety Management Program in 2024.

Expanded Apprenticeship Program

MMUA's Apprenticeship Program has recently grown through an important new partnership with the Minnesota Department of Labor and Industry (MN DOLI). This collaboration makes MMUA the official sponsor for the Lineperson Apprenticeship Program, easing the administrative load for utilities and facilitating a streamlined certification process for apprentices.

The program offers a robust curriculum featuring extensive on-the-job training, safety components, and tailored educational experiences. Its flexible, we-come-to-you approach allows for customized training that adapts to each utility's specific needs and apprentices' learning styles. With these advancements, MMUA remains at the forefront of developing skilled lineworkers and supporting municipal utilities in workforce development.

Students learn about locating at Underground School at the MMUA Training Center in Marshall.

MMUA's Jay Reading instructs on wood chipper safety at the Tree Trimming Workshop.

New program: Gas Circuit Rider Plus

The MMUA Gas Circuit Rider (GCR) program offers essential support for municipal gas utilities, focusing on Pipeline and Hazardous Materials Safety Administration (PHMSA) compliance. It provides technical training and regulatory assistance to ensure operators meet all requirements, including operator qualification and the Gas Distribution Integrity Management Plan (DIMP).

In 2024, MMUA is launching the Gas Circuit Rider Plus (GCR+) program, designed to complement the GCR core program with additional flexibility and customization. GCR+ allows utilities to purchase tailored sessions for:

- Training and evaluation
- Inspection assistance
- Operator qualification
- New employee training
- Leak inspection
- Program development and manual updates
- Regulator/meter assistance
- Other utility-specific topics

This initiative aims to enhance proficiency and support ongoing excellence in natural gas operations.

Excellence in Member Benefits

MMUA's strategic plan focuses on improving benefits for all members. Here are some benefits we have added or upgraded this year.

New MMUA website

For the first time in a decade, the MMUA website has undergone a major refresh. In June, MMUA launched a new, modern website and online membership platform. Improvements include an enhanced directory, robust library tools, and clearer service descriptions.

Grant assistance

This year, MMUA doubled down on its commitment to helping members access grant funds. We have spearheaded grant collaborations for federal GRIP funds and attained state funds that help us offer members expert assistance with grant applications and stewardship. With the addition of MMUA's Grant Development and Technical Support Coordinator, the Association has helped members gather information and edit applications for federal and state grants.

Award-winning publication

The Resource, MMUA's flagship publication, was honored with an APPA Excellence in Public Power Communications Award of Merit in November 2023 for its bold new look and content.

Human Resources webinars

MMUA introduced quarterly webinars to address HR topics relevant to municipal utilities. These webinars aim to keep members informed about changes in HR law, pending legislation, and current trends. In addition, a new column in *The Resource* will provide further insights and updates on HR issues.

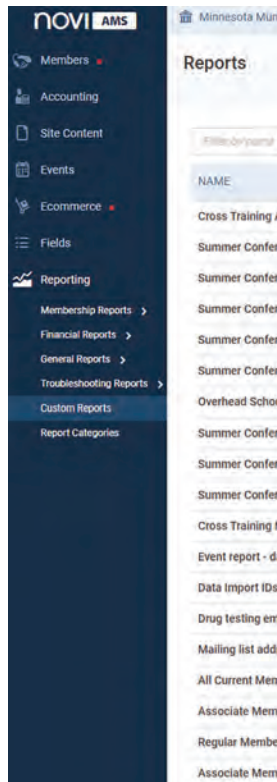

MMUA's strategic plan outlines a five-year vision for efficient association operations, staffed with competent and forward-looking professionals. Goals include implementing a strategic visioning and accountability process, enhancing staff development, clarifying and promoting the organization's brand, updating governance procedures, leveraging partnerships for efficiency, seeking grant funding, and optimizing financial policies. The plan aims to foster competence, innovation, and effectiveness while ensuring prudent management of resources and alignment with MMUA's mission.

Upping our organizational development game

In 2024, MMUA introduced a new leadership role to help members evolve.

The Human Resources and Organizational Development Manager will be spearheading a whole new approach to leadership development for municipal utilities, envisioning and implementing workforce changes with the help of a member-driven workforce development task force, and making sure member utilities have access to the information and data they need to stay on top of what is happening in the world of personnel.

New Association Management Software

MMUA launched new association management software in 2024 alongside the new website.

With improved segmentation and information storage, the software allows MMUA staff to create a more personalized experience for members. It also simplifies invoicing, event management, and other administrative tasks, streamlining operations significantly.

Member Benefits

Government relations

MMUA's legislative team actively represents members' interests on a wide variety of state and federal legislative and regulatory issues. Our legislative team includes two staff lobbyists, bolstered by additional senior staff. MMUA also retains a Washington firm to monitor Congressional activity and represent member interests on federal issues.

Technical assistance

The utility industry presents complex challenges to everyone. Municipal utility workers are amazing problem solvers, but sometimes a situation requires immediate attention when there is no attention left to give. MMUA is a one-stop shop for expertise, and our staff is eager to help hometown utilities solve issues whenever, wherever, and however they may arise.

Access to services

MMUA offers to members a wide range of paid consulting services and technical training opportunities. By becoming a member, a utility can save significantly on safety training and oversight, skill development, apprenticeship, regulatory management, and more. For a snapshot of services and programs available, please visit mmua.org.

Mutual aid

MMUA coordinates emergency recovery efforts within and outside the state. From repairing broken lines in the wake of a storm to restoring a generator on its last legs, when a municipal utility needs assistance, MMUA eagerly answers the call to coordinate mutual aid among members and beyond the borders of the Association.

Publications

MMUA will keep you up-to-date with our weekly e-newsletter, The Digest, and go in-depth on the stories you care about with our monthly newspaper, The Resource. Members receive weekly updates on offerings through the Weekly Event Roundup. MMUA also publishes an Annual Report and a Membership Directory to keep you informed and connected.

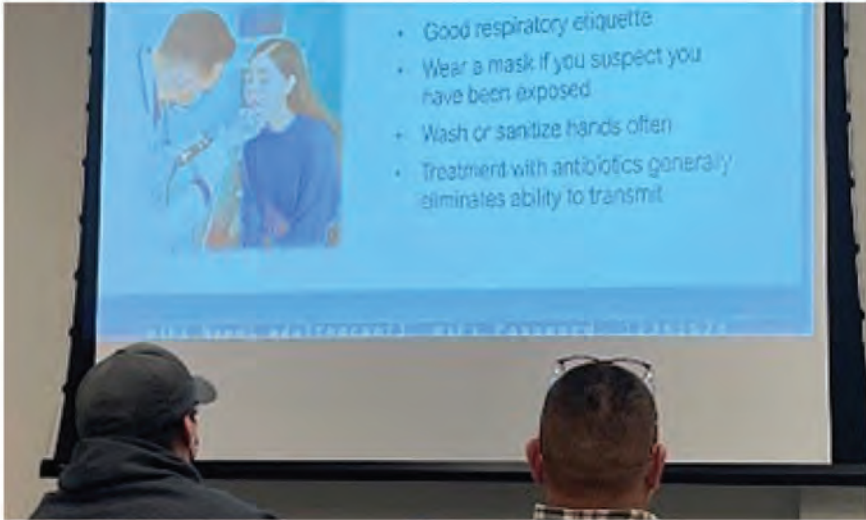

Grant assistance

MMUA has expert staff available to provide guidance, feedback, and resources to help you secure and administer grants. MMUA also monitors for relevant funding opportunities and shares them with members regularly. These opportunities are shared weekly in The Digest and are housed at mmua.org/grant-information on our website.

Safety Management Program

The safety and well-being of employees, customers, and the general public are at stake every day. It's important to change the mindset around safety policies and procedures in order to build a solid safety culture.

Purpose

Our Safety Management Program is built on the ongoing partnership developed between your MMUA regional safety coordinator and your staff; management team; and board, council, or commission. We're committed to building a long-term relationship with your organization to better understand your needs and provide the best possible guidance.

Nationally recognized and trusted by local governments throughout our region, MMUA's Safety Management Program provides comprehensive solutions for your safety concerns.

What you will learn

Wondering what's included in your monthly visits? Here's a sample of program components that can be customized to fit your needs and your community.

- » On-site safety committee meetings
- » Standard record-keeping system
- » Company-wide and department-specific safety education
- » Development and organizational safety goals
- » Facility and worksite audits with reporting
- » Maintenance of safety manuals and programs
- » Monitoring and reporting of safety training requirements
- » Preparation of state and federal reporting
- » Consistent interpretation of laws, rules, and regulations regarding compliance management and general safety

Contact MMUA'S
Director of Training,
Mike Willetts, at
763-746-0705.

Job Training and Safety Program

Purpose

The Job Training and Safety (JTS) program is MMUA's longest running training program. Currently, more than 100 utilities participate in the JTS program. The program is designed to help all levels of lineworkers become more proficient at their jobs. The curriculum varies, adapting annually to meet the evolving needs of member utilities.

JTS programs are presented three times throughout the year. Your JTS instructor will provide advance notice for scheduling. To download a brochure featuring information on current training topics, visit mmua.org/jts.

To learn more about the program, contact Assistant Director of Technical Services Jay Reading at jreading@mmua.org.

Purpose

MMUA has developed a cost-effective and user-friendly program to help our members develop a raw, first-year apprentice into a fully qualified journeyman lineworker.

The course allows the municipal utility employee who wants to advance in the lineworker's trade to receive professional training from experienced instructors, right at the utility site.

Students are given a cutting-edge academic program along with extensive hands-on training to help them progress to journeyman status. This training often involves actual projects on your distribution system. Students also attend several MMUA schools, tuition free.

To learn more, please visit mmua.org/apprenticeship or contact MMUA's Apprenticeship Instructor, Roger Avelsgard, at ravelsgard@mmua.org.

Diesel Generation Operators Training Program

Purpose

The Diesel Generation Operator Training (DGOT) program is a new offering from the Minnesota Municipal Utilities Association (MMUA). Many Minnesotan towns have the capacity to generate their own electricity, and qualified operators are difficult to find.

MMUA has developed DGOT to assist towns with assessment, education, and oversight of their generation procedures and practices to create a situation for safe operation of generation facilities for personnel and equipment.

To learn more, visit mmua.org/generation or contact DGOT Coordinator Paul Helling at phelling@mmua.org.

Gas Services

Purpose

The MMUA Gas Circuit Rider (GCR) program provides specialized support for municipal gas utilities. This service includes both operator technical training and regulatory compliance assistance, and has proven to be very helpful and popular for the gas utility member.

This program pays attention to detail, but also manages to be wide-ranging and flexible, with the ability to address a variety of needs.

In 2024, MMUA launched the Gas Circuit Rider Plus (GCR+) program. This new initiative is designed to enhance the GCR core program, offering additional flexibility and customization for utilities wanting more time and services.

To learn more, please visit mmua.org/gas or contact MMUA's Gas Circuit Rider, Dennis Danielson, at ddanielson@mmua.org.

Support Services

Drug and Alcohol Testing Consortium

The MMUA Drug and Alcohol Testing Consortium was created to meet the Federal Motor Carrier Safety Administration drug and alcohol testing requirements. The Consortium has developed a Substance Abuse Prevention Program to assist member employers in meeting these federal requirements. At last count, more than 1,200 Minnesota municipal CDL holders were enrolled in the MMUA random testing pool.

To learn more about the program, contact Theresa Neddermeyer at tneddermeyer@mmua.org.

Strategic and Operational Planning

Most utilities are adept at financial planning year to year, and even at planning for capital expenditures over many years. Are you as successful at holistically planning for the future of the utility? Have you engaged your stakeholders and built a comprehensive plan that takes things like community relations, education, workforce development, increased sustainability, and related topics into account?

MMUA can help with this. With a project tailored to your needs, we can assist you with research, data analysis, facilitation of planning sessions, and creation of your customized strategic plan. We can also help you translate that plan into operational objectives with measurable outcomes and a reporting process that provides transparency for everyone.

Contact Karleen Kos at kkos@mmua.org to discuss your needs.

Human Resources and Administration

MMUA's Human Resources team is here to help. Here are a few of the services we provide to MMUA members. Contact Shelly Dau at sdau@mmua.org for more information.

- » Annual salary and benefits survey—results are free to members who participate
- » Periodic webinars on topics of interest to municipal utilities—free to members
- » Roundtable discussions on hot HR topics at conferences
- » Consultation on policies, procedures, and implementation issues
- » Development of customized team-building programs for your utility or city

Conferences

Legislative Conference

MMUA's Legislative Conference is the primary opportunity for municipal utilities to inform and influence state lawmakers. It seems every session is a busy one for municipal utilities, and we have to work hard to make sure our voice is heard above the noise of long and sometimes contentious sessions.

Any public official will tell you having people in the room gets their attention. A strong turnout ensures that our message is heard. The conference is typically held near the beginning of the legislative session in January or February.

Summer Conference

The Summer Conference is the biggest event of the year for MMUA. Featuring multiple tracks for utility leaders, technical employees, and commissioners, the conference is tailored to be informative and interactive for any attendee regardless of position.

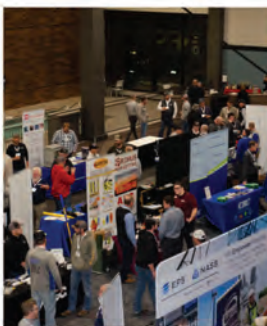

The conference also features MMUA's largest trade show of the year. Annual awards are presented at the Summer Conference, and it is capped off by the annual member business meeting. The Summer Conference is held at the end of August. It will be held in Rochester in 2025.

Emergency Preparedness and Restoration Conference

At this conference, utility leaders engage in active discussion and idea sharing around the mutual aid process. Attendees offer recommendations for improvement and deepen relationships with fellow industry professionals.

Planning, exercising, and training can help enhance your emergency response plan, so you can anticipate deficiencies and proactively address potential consequences due to an emergency. This conference is typically held in St. Cloud in the early spring.

Technical and Operations Conference

The Technical and Operations (T&O) Conference is designed to offer useful information to superintendents, managers, supervisors and crew leaders about the upcoming challenges utilities are going to face with system reliability, technology, employee retention, and more. It is also designed to create quality leaders within the municipal utility industry.

For associate members, the T&O trade show is one of the best opportunities of the year to connect with the municipal utility employees who will use their products most. The T&O Conference is held each December in St. Cloud.

Competent Person Training

Digging around natural gas and high voltage power lines is a very critical process and needs to be done with extreme care. Competent Person Training participants will learn to identify the hazards associated with trenching and excavation.

Goal

Participants will be taught the basics of OSHA's excavation standards (29 CFR 1926—Subpart P), learn about soil testing and use soil information to determine the correct protective system needed.

Who should attend?

This course is intended for public works personnel, water/wastewater personnel, lineworkers, engineering personnel, contract workers, and anyone involved with underground utility or infrastructure work.

What you will learn

This workshop includes classroom and hands-on instruction/demonstration to ensure participants can obtain the designation of a Competent Person at the end of this workshop. Course topics include:

- » Display knowledge of 29 CFR 1926—Subpart P: Excavations
- » Demonstrate correct soil-testing procedures
- » Identify hazards associated with trenching and excavations
- » Understand and use the different types of protective systems
- » Understand proper “pot holing practices”
- » Gas and powerline excavation

Location and date in 2025

- May 20–21
- MMUA Training Center (Marshall)

Cross Training School

The very nature of public power requires an ability to respond 24/7. Having a cross-trained pool of employees ensures you have sufficient numbers of trained personnel to perform necessary work in a cost-effective manner.

Goal

Cross Training provides fundamental “basic training.” Participants can increase their knowledge of lineworker tools/equipment, broaden their understanding of electricity and hazards, and increase confidence in their ability to assist.

Who should attend?

Cross Training is intended for the non-lineworker employee who may, at times, be called into service to work alongside a qualified lineworker (i.e. during an outage or other emergency).

What you will learn

Cross Training School features a blend of classroom and hands-on instruction led by MMUA employees and subject experts. Training topics typically include:

- » Powerline training
- » Basic electrical theory
- » Overhead and underground construction
- » Grounding, rope, rigging
- » Meters and meter safety
- » Distribution transformers and equipment
- » Troubleshooting (primary and secondary)
- » Basic chainsaw safety
- » Generator backfeed precautions
- » Bucket truck operation

Location and date in 2025

- August 5–7
- MMUA Training Center (Marshall)

Electric Skills Training for Water and Wastewater Operators

Understanding what electrical work can and cannot be done by a non-electrician operator or maintenance technician can present a challenge. Are you confident that the work you are assigned—or that you are assigning—can safely and legally be performed?

Goal

This comprehensive training program helps non-electricians improve skills and gain competency. Recognizing one's limitations is the key to ensuring everyone's safety.

Who should attend?

This course is intended for water/wastewater operators, technicians and support staff. Minnesota Department of Health will grant 10 related hours to Minnesota water operators. The Minnesota Department of Health and the Minnesota Pollution Control Agency typically grant training hours for attending.

What you will learn

Skill competency will be evaluated for each participant. Upon successful completion of course, a participant will receive a certificate identifying specific electrical job tasks qualified to do with the caveat of any regulatory/legal limitations.

Training topics typically include:

- » Proper personal protective equipment
- » Review National Electrical Code
- » Hazard identification and arc flash hazards
- » What electrical work a non-electrician can legally do
- » Electrical testing and troubleshooting activities
- » Lockout tagout
- » Determining appropriate equipment
- » Voltage checks; testing and sizing fuses
- » Overview of electrical prints

Location and date in 2025

- March 19–20
- MMUA Training Center (Marshall)

Generation School

With a mix of classroom and hands-on learning, Generation School appeals to all learning styles and all levels of experience.

Goal

In the classroom, attendees will learn about security in generation facilities, fuel storage standards, testing and maintenance best practices, and more. Attendees work and learn with real systems, seeing and feeling what the seasoned instructors explain in real time.

Who should attend?

This course is intended for generation operators first and foremost. However, anyone with an interest in understanding generation practices is welcome to attend.

What you will learn

This workshop includes classroom and hands-on instruction/demonstration to ensure participants can obtain the designation of a Competent Person at the end of this workshop. Course topics include:

- » Physical and cybersecurity for generation facilities
- » Fuel storage standards
- » Hands-on training: Attendees separate into training groups dependent on equipment preference (Caterpillar, Cooper/Enterprise, Fairbanks)
- » Generator maintenance, inspections, and testing procedures
- » Tour of generation facilities
- » Tour of local manufacturer

Location and date in 2025

- April 15–17
- Glencoe

Meter School

Meter School is an ideal opportunity to obtain hands-on technical electric metering training, suited for electric workers of any level of experience.

Goal

Meter School features two course options: basic/intermediate and advanced. Each course offers a combination of classroom and hands-on exercises with direct instructor oversight and feedback. In addition, we offer a pre-conference course covering basic metering. The pre-conference is an ideal introductory course for those with little metering experience or as a “refresher” on basic metering.

Who should attend?

This course is intended for electric workers of any skill and experience level. Attendees are separated by experience during the school, which includes a pre-conference session for those with little to no experience.

What you will learn

Meter School training builds on the pre-conference course and includes more hands-on training.

Training topics typically include:

- » Why we have electric meters
- » Single phase meters and meter forms
- » Current transformers and voltage transformers
- » Electric meter safety
- » Mounting electric meter sockets
- » Single-phase socket wiring
- » Troubleshooting electric installations
- » Theft of electric power

About the pre-conference session

The pre-conference is designed to outline the basics of metering as a foundation for Meter School, covering important topics such as:

Training topics typically include:

- » Definitions of common abbreviations
- » Blondel's Theorem
- » Common metering formulas
- » Self-contained metering and troubleshooting

Location and date in 2025

- February 4–7
- MMUA Training Center (Marshall)

Overhead School

One of MMUA's most popular technical training offerings, Overhead School is an ideal opportunity to interact with fellow lineworkers from across the state, refresh on the best safety practices, and sharpen your skills to deliver the best value for your community.

Goal

Overhead School offers lineworkers practical instruction on facing the most common challenges of the industry. Combining classroom and hands-on instruction, the school is designed to meet learners where they are at.

Who should attend?

Whether you are a seasoned journeyman looking to stay current or an apprentice just starting out, this school offers something for everyone.

What you will learn

Classroom sessions are held on the first and last day of the school. Training topics can include:

- » De-escalation strategies
- » Safety protocols
- » Load securement and CDL requirements
- » Fault circuit indicators

Underground School also includes hands-on training sessions, including on the following topics:

- » Equipotential grounding
- » Troubleshooting and system maintenance
- » Backyard easements and constructions
- » Wire stringing
- » Three-phase transformer banks

Location and date in 2025

- September 9–12
- MMUA Training Center (Marshall)

Substation School

Having the best distribution system in the world won't matter if your substation isn't operating properly. This school can benefit anyone working in/on your substation—from the substation technician to the lineworker interested in learning more about substations.

Goal

In addition to expert-led classroom instruction, attendees will be able to tour a substation and a transformer manufacturer. Substation School is the best annual opportunity in Minnesota for learning about current trends and best practices for maintaining a utility's vital substations.

Who should attend?

This school can benefit anyone who works in a substation environment or those interested in learning more about underground utility or infrastructure work.

What you will learn

Substation school addresses key issues which require annual updates and progressive training as well as timely and relevant plenary topics which vary from year to year.

Training topics typically include:

- » Substation maintenance and inspections
- » The basics of substation configuration
- » Cause and effect of improper maintenance
- » Benefits of infrared technology
- » Safety and security in substations
- » Proper switching techniques
- » Facility tours

Location and date in 2025

- March 11–13
- Elk River

Transformer School

Through MMUA's Transformer School, participants learn about the basic three-phase systems with some basic phasor diagrams and will be able to explain the relationship of the phasor to the transformer itself.

Goal

Participants work with miniature transformers that are energized and will blow fuses in order to experience what happens when something is wired incorrectly. Additionally, they discuss motor rotation as it relates to three-phase systems, as well as ways to prevent voltage surge when switching a three-phase bank.

Who should attend?

This school can benefit anyone who works in a substation environment or those interested in learning more.

What you will learn

Upon completion of the three-phase transformer connections class, participants should have a good understanding of the following topics related to transformers:

- » Basic three-phase connections
- » Delta connection
- » Wye connection
- » Open delta connection
- » Three-phase troubleshooting

About the pre-conference session

The pre-conference course is intended to serve as a basic or refresher course on the fundamentals of single-phase transformer connections and theory.

This course would be helpful for anyone involved with the electric line crew—from apprentice lineworkers to employees from other departments that assist as a ground person.

Location and date in 2025

- November 18–21
- MMUA Training Center (Marshall)

Tree Trimming Workshop

Maintaining your electric lines often includes some degree of tree care. And following a storm or strong winds, clearing trees from power lines may be necessary to restore service. It's vital that crews are properly trained and comply with applicable safety standards.

Goal

This workshop offers attendees a thorough overview of electrical line tree trimming. This course will stress the importance of the job briefing and planning for the job. Safety hazards will be identified and the precautions to take will be covered.

Who should attend?

This workshop is intended for any municipal employee responsible for tree work; it's not just for lineworkers.

What you will learn

Training topics typically include:

- » Review of OSHA and ANSI safety standards
- » Chainsaw safety and maintenance
- » Wood chipper safety and proper use
- » Overview of tree species; best time of year to cut them
- » Proper way to trim a tree and how much to trim
- » Rigging techniques and proper application
- » Tree cuts for clearing trees and limbs from power lines
- » Proper techniques on felling trees
- » How to be an effective team and work safely on the ground and in the bucket

Location and date in 2025

- September 22–25
- Location to be announced

Underground School

The very nature of public power requires an ability to respond 24/7. Having a cross-trained pool of employees ensures you have sufficient numbers of trained personnel to perform necessary work in a cost-effective manner.

Goal

The Underground School features a hands-on training where participants will rotate through six different sessions covering a variety of topics and activities to develop new skills and enrich proficiency.

Who should attend?

Whether you are a seasoned journeyman looking to stay current or an apprentice just starting out, this school offers something for everyone.

What you will learn

Classroom sessions are held on the first and last day of the school. Training topics can include:

- » Worksite traffic control
- » Distributed energy resources safety
- » Load securement and CDL requirements

Underground School also includes hands-on training sessions, including on the following topics:

- » Equipotential grounding
- » Cable pulling
- » Directional drill operation
- » Troubleshooting and fault-finding primary cable
- » Vehicle vs. junction accident scenario
- » 600-amp terminations

Location and date in 2025

- May 6–9
- MMUA Training Center (Marshall)

60 years of service at work for you each day

Kendall Provides:

- Line and Right-of-Way Clearance
- Herbicide Application
- Ongoing Vegetation Management
- 24/7 Emergency Storm Response

First American Equipment Finance is a wholly-owned subsidiary of City National Bank, an RBC Company. First American's Power & Utilities division works exclusively with public power utilities to provide full-solution financing tailored to meet business objectives – from project simplification and budget consistency to tax savings and accounting benefits. Visit faef.com/power-utilities.

PSS designs innovative safety devices for roadway and pedestrian work zone applications.

PSS engineered the proven distracted driving countermeasure RoadQuake temporary portable rumble strips to alert drivers to changing road conditions. We also recently introduced the FirstGard foldable cone, providing up to twice the reflective surface compared to traditional traffic cones but with a durable, compact design for easier transport. For more information call (800) 662-6338 or visit www.pss-innovations.com

We are in the business of providing superior corrosion control. Corrosion control programs are only as good as the components and the people that install and maintain them. General Corrosion Corporation is made up of dedicated people certified by Nace International as corrosion experts. We employ corrosion technician cathodic protection specialists, senior technologists and skilled construction trades people. Our materials and components meet or exceed the high performance standards of the industry. Our vacuum truck is available to expose utilities, clean valve boxes and catch basins, and excavate for anodes, test stations, utility poles and guardrails safely and economically.

General Corrosion Corporation is your industry leader in cathodic protection services. We are dedicated to providing only the highest quality cathodic protection (design, installation & maintenance), AC mitigation & vacuum excavation to the midwest & surrounding areas. We provide superior corrosion control services safely, ethically, and economically.

Premier Line Services is a company that specializes in live line dry ice CO₂ cleaning. Premier Line offers clients the benefits of cleaning live electrical cables and equipment without the need of an outage. Our Dry Ice CO₂ cleaning technique can rid electrical equipment of contaminants that greatly reduce the dielectric strength and leakage current that can result in flashovers that cause damage to equipment and lead to costly service outages. Dry Ice CO₂ cleaning also has many commercial and industrial applications as well, all while being 100% environmentally friendly.

Cell: 651-269-5420

jim.murray@trynzcic.com

Trynzcic bridges the gap between advanced metering infrastructure (AMI) and traditional business processes to help utilities providers achieve a new level of service management performance. Trynzcic's IoT software platform is used by utility distributors to turn never-ending streams of raw, smart meter data into polished, intelligent business workflows. Built on Microsoft Azure, Trynzcic's software platform combines event-driven architecture and serverless computing to give providers an affordable way to process, prioritize and respond to utility issues like outages or equipment failures in real-time.
