

AI Explained

Webinar Overview:

Artificial intelligence is transforming education, workforce development, and small business support across the country. In this session, Charles Davis explains how large language models function behind the scenes and what they can realistically accomplish today. The webinar includes demonstrations of real AI applications such as Ventra, an advising assistant designed for student and entrepreneur support, and Jeremy, the AI career specialist used by SkillPointe.

Attendees will see how these systems work in practice and how similar tools can be integrated into everyday environments. The focus is on clarity, real world examples, and practical steps that colleges and organizations can take to adopt AI in a safe and productive way.
