

Upton Avenue Remodel

RESIDENTIAL KITCHEN \$150,000 - \$200,000

OVERVIEW

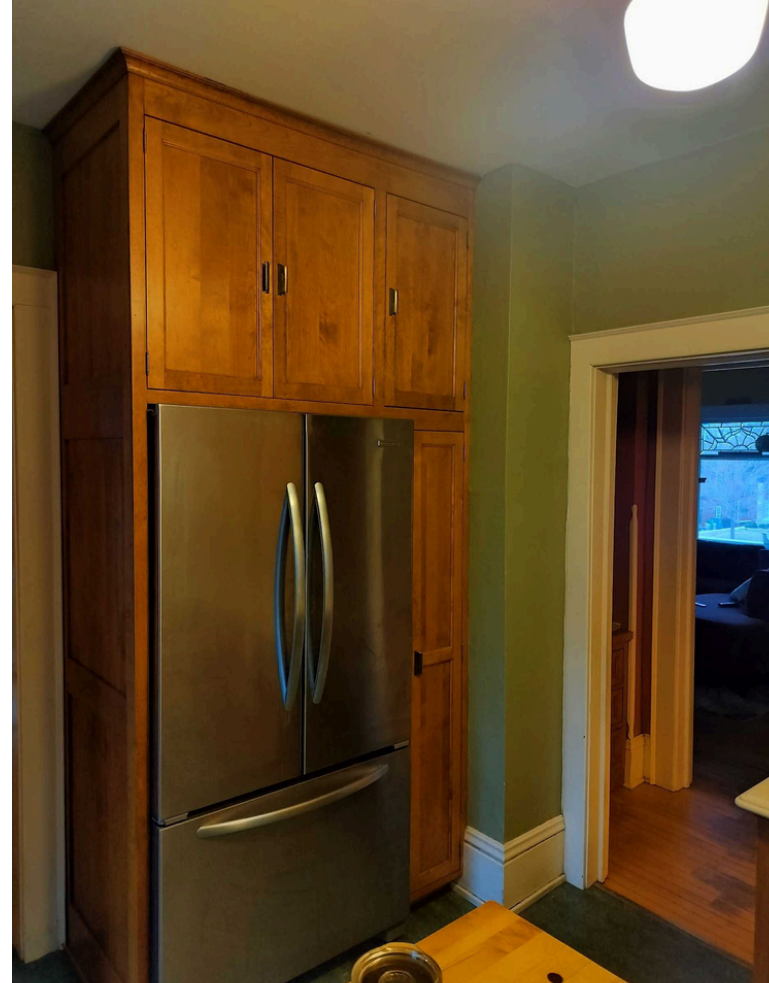

Our clients wanted an updated and more functional kitchen of their Minneapolis home. As part of the renovation, we converted an unused main floor room into a pantry and added a powder room. The goal was to update the home, originally built over 100 years ago, with a 1970s aesthetic and a more functional layout.

UPTON AVE REMODEL | RESIDENTIAL KITCHEN \$150,000 - \$200,000

BEFORE

Prior to the renovation, the kitchen felt outdated and lacked a functional island. With minimal cabinet storage, the kitchen didn't maximize the square footage. Our clients wanted to keep the original dining room buffet in its location, which created a unique challenge when designing the updated floor plan.

DETAILS

The kitchen features custom cabinetry that mimics a 1970s style. Azure polished quartzite countertops, patterned floor tiles, and wallpaper bring personality to the kitchen. In-floor heat throughout the kitchen and scullery add warmth. The pendants and tile details bring the space together.

SCULLERY

Adjacent to the kitchen is a multifunctional scullery and mudroom, serving as additional storage and prep space. The palette of the flooring and cabinets tie into the 1970s design style seen throughout the kitchen. A new window brings natural light into the space, and a pocket door leads to the newly added powder bathroom.

CHALLENGES

Prior to the renovation, the locations of the existing radiators were not ideal. To avoid the need for radiators while working with an older Minneapolis home, hydronic in-floor heat was installed throughout the space. Tile was installed over the in-floor heat, adding to the overall aesthetic.
