

BENEFITS OF AN LED LIGHTING RETROFIT

Reduce Energy Costs

Lighting is one of the largest electricity expenses, which is why upgrading your facility to LEDs is one of the smartest investments you can make.

Improve Energy Efficiency

LEDs are more efficient, providing better light with less than half as much power consumption as standard high-pressure sodium (HPS) or Metal Halide (MH) lights.

Enhance Safety & Productivity

Studies indicate that better-quality LED lighting can increase efficiency and productivity as well as improve employee morale.

Score Tax Incentives & Rebates

Due to the substantial rebates and savings available, many clients can finance the project solely through the financial impact that energy efficient lighting creates.

Improve Lighting Quality

LEDs provide more accurate color rendering, making it easier to recognize objects illuminated by the light. LEDs can significantly improve the quality of light and visibility.
