

## New ICD-10 Codes: Underimmunization for COVID-19 status

Effective April 1, 2022, there is a new series of ICD-10 codes for COVID-19 (Z28.31\_\_) that was created to indicate that a patient is unvaccinated or 'under-immunized'. There is also a new code (effective 4/1/2022) to identify patients who are 'under-immunized' status for vaccines other than those for COVID-19; this includes immunizations specified as delinquent or lapsed.

The new codes are:

- Z28.310 Unvaccinated for COVID-19
- Z28.311 Partially vaccinated for COVID-19 (*i.e., not up to date with all the CDC recommended COVID vaccines including appropriate boosters.*)
- Z28.39 Other underimmunization status (*including influenza, TDAP, etc.*)
  - Delinquent immunization status
  - Lapsed immunization schedule status

NOTE: Codes Z28.310 and Z28.311 are not to be used for individuals who are not eligible for the COVID-19 vaccines, as determined by the healthcare provider.
