# TAKE ADVANTAGE OF TCA *and* What It has to Offer Your Company

Questions I am frequently asked are:

1. Why join TCA?
2. What does TCA have to offer me?
3. What benefit will TCA bring to my business?

Since the beginning of my time on the Board of Directors, I have been talking with other TCA members, as well as non-members, and the questions I get asked more than any others are: Why join TCA? What does it have to offer me? What benefit will it bring to my business?

Tennessee Concrete Association, like many other organizations, offers community, fellowship, and unity. But most importantly, being involved with TCA helps provide each member with an excellent opportunity to network within our industry. I often tell people that the more involved they become with committees, business meetings, conventions, classes and workshops, the more benefit they will receive. What better way to improve your business and current operations than by networking with people who have been serving our industry—and have a little fun while you are at it!

Tennessee Concrete Association has many services to offer you as a member.

- **TCA helps with plant improvements:** Green-Star Certifications, Compliance Assistance Program, Plant Certification, Wastewater and Storm Water Facilities Evaluations
- **TCA helps to educate and train your labs, drivers, inspectors, sales reps, contractors with certification programs:** ACI Grade 1 Field Testing Tech, ACI Flatwork, ACI Strength Test, ACI Laboratory Tech (Level 1), ACI Laboratory Tech (Level 2), ACI Special Inspector, Aggregate Testing (Level 1), NRMCA Certified Concrete Sales Professional, NRMCA Certified Driver Professional,

NRMCA Pervious Certification, NRMCA Batch Plant Operator, TDOT Grade 2, TDOT Grade 3 (*Descriptions of each can be found on [www.tnconcrete.org](http://www.tnconcrete.org) under certifications.*)

- **TCA works to promote the concrete industry with community involvement:** Partnering with Tennessee Environmental Council on the Tennessee Tree Program
- **TCA committees focus with issues on hand that our industry and organization faces:** TDOT Liaison, Future Leaders, Government Affairs, Certifications, Technical, Installers, Membership, Operations, Nominating, Office and Convention Committees
- **TCA's partnership with MSTU helping to educate the future of our industry:** Internship, Research and Development Grants, Scholarships
- **TCA's office and site:** TCA "campus" focuses on every single aspect of the concrete spectrum. Visitors are shown by example the many ways concrete can be used on a day to day basis and can help by continuing education for employees and customers.

Above are just a few of the ways in which TCA benefits not only our industry, but our state and your company as well. I look forward to meeting with you during the upcoming months to help further grow our network and our friendships! As always if you have any questions or concerns and certainly if TCA can help you serve the needs of this industry, please don't hesitate to contact me at [ajc@childressconcrete.com](mailto:ajc@childressconcrete.com).

# Bigger is Better— **REALLY?**

**YOU COULD  
BE THE NEXT  
BIG WINNER—**

*it just takes one*

*more bet!*

Casinos are

masters at

creating this kind

of atmosphere,

and so is our

current political

climate.

**W**elcome to the 2011 TCA Member Directory and the summer issue of our magazine. The big focus in this issue is our members and that is entirely appropriate since member support is what makes TCA's continued existence a reality. Please keep this directory handy throughout the coming year and use it whenever you need to find a local concrete supplier, contractor, testing lab or other concrete industry company. Even in today's electronic age, having a printed copy around can come in handy.

I remember one of my first visits to a casino—Las Vegas, of course—back when there was still a bit of old Vegas to be seen. You actually put real coins into machines instead of swiping a card, and all the casinos weren't just carbon copies of each other. I don't remember the particular casino but I do remember the excitement and the air of possibility that seemed almost tangible—I could be the next big winner! From all around, you could hear the sound of machines playing and it seemed that wherever you turned your ears you could hear the sound of a machine paying off as the coins clanked into the tray.

Casinos are obviously masters at creating this kind of atmosphere where you just know that you could be the next big winner and just one more bet is all it takes. They are also masters at filling the casino floor with distractions to keep you

from thinking very deeply about that next bet: free drinks, cheap food (at least back then), the constant sound of money being paid out, and no quiet place to gather your wits. It's all designed to keep us feeding money into machines or onto tables where the odds are always in favor of the house no matter what game you are playing. And it works—hence the extravagant casinos and the ever-bigger hotels built with money bet and lost.

Our political arena is similar in many ways—it is full of distraction and misdirection all focused at keeping our minds off of the real issues and keeping the odds stacked in favor of the house (that would be the incumbents and their cronies). The interests of the mythical "American People" are indeed just a myth for most politicians at the national level, as it seems their only concerns are re-election and the consolidation of ever more power. Senate Minority Leader Mitch McConnell says his main concern is to insure that our current President is not re-elected—issues like addressing our faltering economy, reducing the size of government, reining in our raging national debt and creating a climate of possibility for future generations apparently don't warrant his attention. Of course, McConnell is not alone as leaders from both sides focus on their party and their political future at the expense of our nation.

It's easy to demonize casinos and politicians, so let's move a little closer to where most of us live—the world of business. It's easy, and self-serving, to place the blame for our current economic problems on too much government regulation, tax policy, foreign competition or numerous other 'villians'. An examination of the facts, however, reveals that a large portion of our current woes can be traced directly back to abuses of trust by business. We can name individual companies like Enron, AIG, or Goldman Sachs or we can broadly blame Wall Street, the financial sector, Big Oil, Big Auto, and more for their spectacularly greedy, expedient and unethical behavior in pursuit of ever bigger profits at the expense of literally everyone else. There's plenty of blame to go around in spite of an acute shortage of anyone willing to take any responsibility.

For me, the question is: How do we move forward from here? It's easy to be overwhelmed by the magnitude of the problems we face, but that is not an excuse to disengage from being part of the solution. I believe there is a common thread running among the issues we face in nearly every sector of our society today and that commonality is the destructive and corrosive nature of bigness. Physically, we are suffering an epidemic of obesity in the United States and most of us are overweight—the cost of this bigness is impacting the cost of healthcare and quite literally placing a 'fat' tax on our economic system.

Big government undoubtedly wastes money through inefficiency and excessive regulation, but it extracts a far bigger price on all of us as it creates artificial winners and losers through political favoritism. Big business (or Big Labor) pursues unfair advantages to increase their profitability and control while reducing choice and increasing prices for society as a whole (think cable companies, banks, the union at Boeing, health insurers, big pharma and big farms, just to name a few).

And this leads me back to my casino story. Many of us have bought into the myth that bigger is automatically better in all things, especially business. Just as I was seduced by the possibility of winning at the casino, we are seduced by the promise of bigness to make us big winners. To make it sound better, we call it 'scale' and tell ourselves that we must pursue the benefits of scale at all costs—after all, 'scale' is the only way we will ever make the really big money. We never count the costs that go along with scale, like reduced opportunities and concentration of power. We rail against consolidated schools that turn our children into numbers, reduce personal attention and eliminate opportunities for kids to participate instead of spectate. Yet those same negative consequences come with 'rationalizing' our business as its size increases. Bigger is not necessarily better.

The desire for personal success and improvement is what makes our country so great; but when we take that attitude

too far it becomes an addiction that can focus only on what's good for me. The common good fades into the background and becomes someone else's responsibility. We tell ourselves that we have a God-given right to succeed no matter what the cost and that fervent belief makes us easy to manipulate. There are many politicians and business leaders who have figured this out and happily use our misguided fervency to further their own ends. It's the same phenomenon that produces jihad and makes 'true believers' so dangerous.

So, how big is too big? I don't pretend to have the perfect answer, but I think the question is worth reflection. I know that big government or big business will not provide the solutions we need. I also have figured out that casinos don't really want me to be a winner, and all that used to be exciting about casinos is now just disgusting.

My hope is that each of us will ignore the distractions and delusions aimed at us from our current crop of leaders; that each of us will have the courage and determination to seek out and implement solutions that provide opportunity for all of us, instead of just the select few who lust to continue reaping the skewed benefits of bigness at our expense.

# Help for Pervious PCC Producers

## Part 3: Fine Aggregate for Pervious PCC

### INTRODUCTION

Tennessee Technological University (TTU) researchers have recently been exploring ways to improve conventional (compacted) pervious Portland cement concrete (PCC). The Tennessee Concrete Association (TCA) has provided materials and guidance for the research described in the articles. We hope you find the information presented helpful in producing improved pervious PCC mixtures. In the third article, fine aggregate use in pervious PCC is explored. Part 4 in the series will examine:

#### 4. **Putting It All Together for a High Performance Pervious Concrete Mixture Design**

Some Tennessee concrete producers have experimented with using fine aggregate in pervious PCC. Their experience and literature [1] both indicate that there are advantages and disadvantages in using fine aggregate in pervious PCC. Specifically, using fine aggregate increases compressive strength and decreases permeability. Increasing compressive strength will increase markets for pervious PCC if adequate permeability can be maintained. For example, the transportation research board recently extended a call for papers on pervious PCC uses in highway and street applications. Obviously, higher compressive strengths will be required in these applications. Parts 1 and 2 showed that supplementary cementing materials and chemical admixtures could be used to increase compressive strength of pervious PCC. If experience and literature are correct, 3000-psi pervious PCC with adequate permeability may be achievable with low compaction. This study is an attempt to quantify the effects of fine aggregate substitution on pervious PCC engineering properties.

### MATERIALS

Type I Portland cement [2] was obtained from a local ready mix producer's bulk storage. A local limestone coarse aggregate close to but not meeting the ASTM C 33 [3] No. 89 gradation specification was obtained from a local quarry. The average results of a washed sieve analysis [4, 5] conducted in triplicate on the local limestone are shown in Table 1. TCA members donated two fine aggregates, river sand (a typical middle Tennessee concrete fine aggregate) and manufactured limestone sand (a typical East Tennessee concrete fine aggregate). The average results of a washed sieve analysis [4, 5] conducted in triplicate on both fine

aggregates are shown in Table 2. Chemical admixtures were provided by the local representative of an international chemical producer. Local tap water was used in all mixtures.

### RESEARCH PLAN

The research team developed a pervious PCC mixture (see Table 3) to act as the control or standard for comparison for the project. Throughout the research, the amount of cement, water and admixtures was held constant for all mixtures. The volume of total aggregate remained constant, but the percentage of coarse and fine aggregates was varied. The control mixture contained no fine aggregate. For each fine aggregate, the variable mixtures contained 2, 4, 6, 8, or 10 percent fine aggregate by volume of total aggregate. Table 4 shows the coarse and fine aggregate proportions for each river sand variable mixture as well as the approximate effective void size,  $D_{10}$ , of the aggregate blend. Similarly, Table 5 shows the coarse and fine aggregate proportions for each limestone manufactured sand variable mixture as well as the approximate effective void size,  $D_{10}$ , of the aggregate blend. Eight batches of each mixture (control and variables) were produced and tested. The goal of the project was to quantify the effects of Tennessee fine aggregate on pervious PCC engineering properties.

### PROCEDURE

All pervious PCC batches were 0.33-cubic feet in size. Each batch was mixed in a one-cubic foot capacity electric mixer. Four 4x8-inch cylinders were cast from each batch. Two of the cylinders were used for compressive strength and static modulus of elasticity determination and two were used to determine effective void content and permeability. All cylinders were cast in two layers in reusable metal molds. Each layer received 4 blows from an AASHTO T 245 Marshall Hammer [7]. The Marshall Hammer is one of the compaction devices being considered by the ASTM Pervious PCC Standard Test Method Subcommittees. Following casting, each cylinder was covered with plastic and allowed to cure for approximately 24 hours. The next day, the cylinders were de-molded and placed in a lime-water immersion tank. Permeability was determined on a pair of cylinders at 14 days as per the method described by Crouch [8]. Following permeability testing the cylinders were dried at 230°F for seven days. Twenty-one days after casting, effective void contents were determined as per ASTM D 7063 [9]. Compressive strength and static modulus

# Help for Pervious PCC Producers

## Part 3: Fine Aggregate for Pervious PCC

of elasticity were determined at 28 days using the other pair of cylinders. On the day of a scheduled break the pair of cylinders was removed from the curing tank and capped with sulfur mortar as per ASTM C 617 [10] and subsequently tested in accordance with ASTM C 39 [11] and ASTM C 469 [12].

### RESULTS

The results of the project are truly voluminous—176 compressive strengths, permeabilities and effective void contents. Average results are shown in this article; detailed information will be available in second author's thesis. Table 6 shows average engineering properties for the control and ten fine aggregate variable mixtures. Each compressive strength, permeability and effective void content result is the average of sixteen cylinders (8 pairs). Each static modulus of elasticity result is the average of eight cylinders.

### ANALYSIS OF RESULTS

Table 7 shows the percentage reduction in average permeability, 28-day compressive strength and static modulus of elasticity compared to the control mixture average results. Yellow shading indicates the change from the previous fine aggregate percentage (the mixture with two percent less fine aggregate) was statistically significant in a paired t-test at the 95% level of significance. Figure 1 shows the very strong linear relationships ( $R^2 > 0.95$ ) between effective void content and percent fine aggregate for both river sand and manufactured limestone sand. The effects of fine aggregate substitution on average permeability, 28-day compressive strength and static modulus of elasticity are described in the following paragraphs.

#### Permeability

Table 7 shows that in eight of the ten cases, the reduction in permeability was statistically significant when compared to the previous mixture. Permeability of pervious PCC is a function of both effective void content and effective void size. Fine aggregate substitution for coarse aggregate effects both effective void content and effective void size. Tables 4 and 5 show the effect of fine aggregate substitution on the effective void size  $D_{10}$ . Just as Figure 1 shows the effect of fine aggregate substitution on effective void content, Figure 2 shows the combined effects of void content and size on permeability. The very strong exponential relationships ( $R^2 > 0.96$ ) for both fine aggregates indicate that permeability is a function of both variables. Figure 3 shows the very strong linear relationships ( $R^2 > 0.98$ ) between permeability

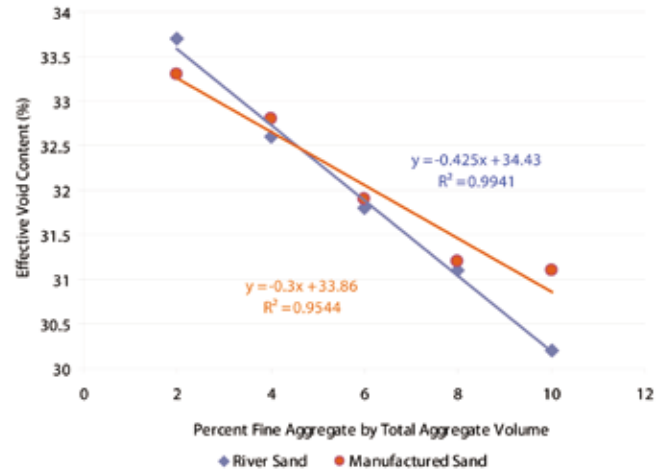

Figure 1. Effective Void Content vs. Percent Fine Aggregate

MS 8	- 69	+ 88	+ 62
MS 10	- 72	+ 82	+ 59

and percent fine aggregate for both river sand and manufactured limestone sand.

*Compressive Strength*

Table 7 shows that in only five of the ten cases (unlike permeability) were the increases in compressive strength statistically significant when compared to the previous mixture. In nine of ten cases an increase in fine aggregate substitution rate increased compressive strength. However, the magnitude of the increase was not constant. Producers should carefully consider if an increase in fine aggregate substitution rate will increase compressive strength enough to justify the almost certain significant loss in permeability.

Figure 4 shows a strong linear relationship ( $R^2 > 0.90$ ) between fine aggregate substitution rate and compressive strength for river sand, the same relationship for manufactured sand is only fair ( $R^2 > 0.74$ ). Figure 5 shows the strong linear relationships ( $R^2 > 0.94$ ) between compressive strength and effective void content for both river sand and manufactured limestone sand when the control mixture data is included. It is important to note that the regression lines are almost identical, possibly indicating that the

gradation of the coarse aggregate is more important than that of the fine aggregate. Additional data will be required to confirm that possibility, but with at least nine times as much of coarse aggregate as fine aggregate it would not be surprising if the coarse aggregate gradation was more important.

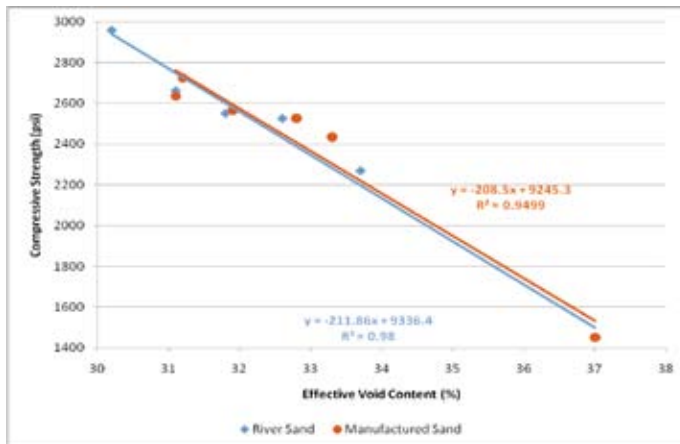

**Figure 4. 28-day Compressive Strength vs. Percent Fine Aggregate**

by L. K. Couch, Cameron Williams, and Daniel Badoe

# Help for Pervious PCC Producers

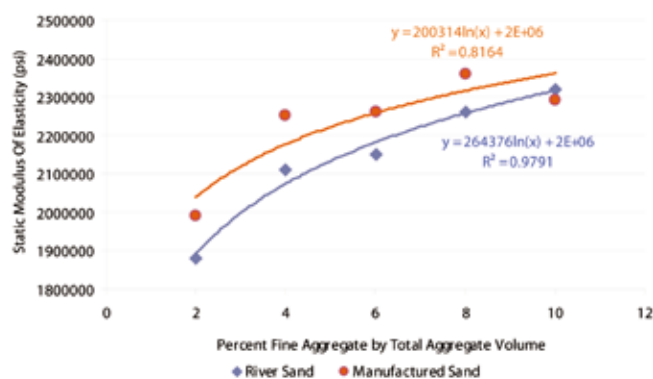

## Part 3: Fine Aggregate for Pervious PCC

**Figure 5. 28-day Compressive Strength vs. Effective Void Content**

### Static Modulus of Elasticity

Table 7 indicates that in only four of the ten cases was the increase in static modulus of elasticity statistically significant when compared to the previous mixture. In eight of ten cases (see Table 7) an increase in fine aggregate substitution rate increased static modulus of elasticity. However, the magnitude of the increase was typically small, except in going from the control mix to the average results for a mix with a two percent substitution rate. Figure 6 shows a very strong logarithmic relationship ( $R^2 > 0.97$ ) between fine aggregate substitution rate and static modulus of elasticity for river sand, the same relationship for manufactured sand was only good ( $R^2 > 0.81$ ).

**Figure 6. 28-day Static Modulus of Elasticity vs. Percent Fine Aggregate**

### FINE AGGREGATE FOR PERVIOUS PCC - HELP SUMMARY

Based on the results from this study, the following advice can be offered to pervious PCC producers.

1. In 4 of 5 cases, a two percent increase in substitution rate of either fine aggregate for coarse aggregate by volume between zero and ten percent, produced a statistically significant decrease in permeability. Percentage reductions ranged from 55 to 78 percent compared to the permeability of the control mixture with no fine aggregate.
2. In 3 of 5 cases, a two percent increase in substitution rate of river sand for coarse aggregate by volume between zero and ten percent, produced a statistically significant increase in compressive strength. For river sand substitution, percentage increases ranged from 57 to 104 percent compared to the control mixture with no fine aggregate. In 2 of 5 cases, a two percent increase in substitution rate of limestone manufactured sand for coarse aggregate by volume between zero and ten percent, produced a statistically significant increase in compressive strength. For limestone manufactured sand substitution, percentage increases ranged from 68 to 88 percent compared to the control mixture with no fine aggregate.
3. In the first two cases (from 0 to 2 and from 2 to 4 percent), a two percent increase in substitution rate of either fine aggregate for coarse aggregate by volume produced a statistically significant increase in static modulus of elasticity. Further increases in either fine aggregate substitution rate resulted in either no increase or no significant increase in static modulus of elasticity. Percentage increases ranged from 31 to 62 percent compared to the static modulus of elasticity of the control mixture with no fine aggregate.
4. Large increases in compressive strength are possible with fine aggregate substitution for coarse aggregate however Tennessee concrete producers considering fine aggregate use are cautioned that a significant decrease in permeability is much more likely than a significant increase in compressive strength or static modulus of elasticity. Trial placements and testing are recommended to avoid producing pervious PCC with inadequate permeability.

## ACKNOWLEDGEMENTS

We greatly appreciate the materials provided by Denny Lind of BASF Admixtures, Inc. and Clark Simpson of Builder's Supply. Thanks to the TTU Department of Civil and Environmental Engineering for providing supplies for the project.

## AUTHOR INFORMATION

L. K. Crouch, Ph.D., P.E. is a professor of Civil Engineering at Tennessee Technological University.

Cameron Williams, E.I. is an Agricultural Engineer with the Natural Resources Conservation Service and a graduate student in the Civil Engineering Department at Tennessee Technological University.

Daniel Badoe, Ph.D. is a professor of Civil Engineering at Tennessee Technological University.

**Sustainability**

**Lafarge believes sustainability can be a competitive advantage.**  
A member of the U.S. Green Building Council (USGBC), Lafarge works with other industry leaders to promote buildings that are environmentally responsible and healthy places to live and work.

Increasingly, Lafarge products, including our recycled content materials and blended cements, are playing a central role in sustainable architecture and construction — projects built under the Council's Leadership in Energy and Environmental Design Program (LEED).

We are proud to serve TN, KY, IN, IL, MO, AR and MS. For more information please contact the Mid-South Sales Office @ 1-800-707-0001 or visit us online at [lafarge-na.com](http://lafarge-na.com) Thank you for your business!

## TCA Services & STAFF

The Tennessee Concrete Association (TCA) was founded in 1986 to promote the increased use of ready mixed concrete in Tennessee. Our mission statement is: "The TCA is the unified voice for the concrete industry to improve our image and awareness through advocacy, promotion and education that support our members, our community, and our future." We work to fulfill this mission in all of our activities. We invite you to join us in building a concrete industry we can all be proud of.

Supported primarily by membership dues, the association is governed by a 15 member board of directors elected annually by members. The board includes 10 ready mixed producer members who direct local promotional programs in each of our three regions.

## Association STAFF

**Alan Sparkman**  
Executive Director

**Darla Sparkman**  
Office Administrator/Certifications

**Sarah Egan**  
Director of Communications

**Bernadine Hughes**  
Bookkeeper

## 2011 TCA PROGRAMS

### Promotion

**Annual Convention** – This event brings all members together to celebrate the year's accomplishments.

**Concrete Conference** – Held each year to update architects & engineers on current concrete practices.

**Tennessee Concrete Magazine** – Published 3-4 times annually.

**Membership Directory** – Published annually with information advertising your company.

**E-Newsletter** – To keep you informed of Association programs, industry activities and promotional events.

**Concrete Excellence Awards** – Design Construction and Environmental awards.

**Product Demonstrations** – Decorative, Pervious, Insulated Concrete Forms, Ultra-thin Whitetopping, & Flowable Fill.

**Literature Development** – Statewide High School Concrete Essay Contest.

**Product Promotion Kits** – Kits available for sales helps.

**Trade & Home Show Displays**

**TCA Website** – [www.tnconcrete.org](http://www.tnconcrete.org) and the Intranet for up-to-the minute calendar events.

**Video & Technical/Promotional Literature Library** – Maintained as a members resource.

### Training and Certification

ACI Field Testing Technician, Grade 1

ACI Flatwork Finisher & Technician

ACI Concrete Laboratory Testing Technician Grade 1 & 2

ACI Concrete Construction Special Inspector

ACI Concrete Strength Testing Technician

NRMCA Certified Driver Training

NRMCA Certified Concrete Production Technologist

NRMCA Batch Plant Operator/TDOT 2 & 3

NRMCA Pervious Installer Certification

NRMCA Certified Concrete Sales Professional

## Past TCA PRESIDENTS

**1986-1987**  
**Reid Brown, PH.D.**  
Vulcan Materials  
Chattanooga

**1988**  
**Richard Jones, Jr.**  
Southdown, Inc.  
Knoxville

# Placing Pervious Concrete

Pervious Concrete Allows Rainwater to seep into the ground. It is instrumental in recharging groundwater and reducing storm water runoff.

**Pervious is a Special Mix...  
It Requires Special Tools to Place It**

## WILDCAT ROLLER SCREED

## COMPLETE PERVIOUS PACKAGE

*"The Wildcat Screed has become my preferred placement method because of it's lightweight, easy to use, and produces a great finish."*

Sarah Egan  
TN Concrete Association  
NRMCA Certified Pervious Concrete  
Installer

The Wildcat Roller Screed is the easiest to use on the market and the most economical. It is also an ideal tool for concrete sidewalks, walking trails and golf cart paths.

We welcome comparison to any other brands.
