2013 TCA President

Residential
Construction
is definitely
recovering
in Middle
Tennessee—
a long-awaited
positive sign.
Now it's time to
move forward
building our
organizations....

SUMMER OF CHANGE

As this summer continues to press on one thing is becoming evident, construction activity is on the rise. From experience in what I see and from others I speak to in the industry, everyone is getting busier. Many say that residential sales will lead you into a recession and out of a recession. Residential construction is definitely recovering in Middle Tennessee—a long-awaited positive sign for our industry. I believe everyone is ready for an increase in sales and for moving past simply surviving this recession. Now it's time to move forward building our organizations and adding to the bottom line once again.

There are other positive signs as well. In speaking with mixer manufactures their schedule for new deliveries is out 90 days or longer. Most any business that employees CDL drivers has a "Drivers Wanted" sign out and many are looking for help in other areas as well. This would have not been the case a year ago and while it is challenging to find new drivers it's a nice problem to have after years of reducing our employee count.

I know from my conversations with Alan that he has been doing some traveling to promote and educate cities, engineers and producers in different parts of the state. Recent trips include Chattanooga to present to the Chattanooga Engineers Club, as well as the local chapter of TSPE as well as sponsoring a pervious concrete certification class in partnership with the City of Chattanooga. This class was attended by 15 city employees who will be dealing with projects that will include pervious concrete, as well as by local engineers

and designers. In west Tennessee—Savannah to be specific—TCA provided onsite assistance to a contractor for a pervious concrete installation, and Alan conducted an ACI Flatwork Finisher class in Cleveland, Tenn. TCA will continue to support pervious marketing and training as tougher regulations will bring an even greater utilization of this product in the coming year.

To bring better focus to our advocacy efforts, the Board decided to designate Green Schools as our legislative priority for 2014. Kentucky has done a great job of promoting the use of ICF's in schools based on student safety and energy efficiency and have seen 75 new schools built with ICF's. Not only does this benefit concrete producers, school boards benefit with much lower operating costs (saving local taxpayers money) and the children benefit from safer places to learn. As the economy takes shape and tax dollars start flowing in we have to be in position to provide long term solutions that will benefit municipalities and school boards. Now is the time for the TCA to act upon this new effort.

The TCA Board has created a new promotion committee to focus on this area, and as we get our efforts coordinated we will be calling on members to help with our promotion efforts. Those who are on the committee are passionate about it and are starting to lay the groundwork for promotion efforts moving forward. We'll keep everyone informed of our progress and I look forward to working with you to make this happen.

Executive Director

TCA providing value to its community of members. Our key concepts remain the same, but our new mission statement incorporates the concept of sustainability.

Re-Visting Our Mission

SETTING GOALS

Adding Details to the Plan

Welcome to the Membership Directory issue of Tennessee Concrete magazine. We are pleased to highlight our members because they are the foundation that makes everything else that we do possible. Remember that you can also find our members online at www.tnconcrete.org (along with lots of other great information).

The focus at our recent Summer Meeting in Panama City Beach was to revise and update TCA's strategic plan. All who attended were invited to lend their brain power and energy to this significant endeavour, and we had good participation on both days as we worked our way toward a new plan. Your TCA Board of Directors did some further work on the plan at their Board meeting on Saturday and I would like to share the key points of our new plan.

We began by re-visiting our mission statement and discussing what TCA needed to do to provide value to its community of members. Our key concepts remain the same, but our new mission statement incorporates the concept of sustainability. We recognized that our industry has to be responsive to providing construction solutions that advance societal sustainability as well as providing a path to sustainability for industry. Our new Mission Statement is:

The Tennessee Concrete Association is the voice of the concrete industry, improving our image and consumer awareness through promotion, advocacy and education that supports members and promotes sustainability.

We did not change our Vision Statement as we felt it still captured the essence of what we want TCA to do in our state...

Building Concrete Solutions for Tennessee Communities.

Our next step was to identify five primary areas where TCA will work to implement our mission and make our vision a reality. Here are those areas:

- **Member Involvement** – Providing benefits, services, opportunities and forums to support members
- **Promotion and Market Share** – Promoting concrete to improve awareness and expand usage

- **Advocacy** – Representing Tennessee’s concrete industry to government & others
- **Education and Certification** – Education and certification for industry
- **Association Leadership and Resources** – Maintaining a highly effective trade association

We set specific goals to be accomplished in some of these areas and our Board is working to add additional details to the plan. Our committee structure has been reorganized to reflect these new areas and we are working to recruit interested people to help in each area.

All five areas were deemed to be of primary importance for a successful future but Member Involvement was seen as foundational to success in every area. We have a new committee focused on that very question and we will be working hard to increase involvement in every area of service.

The Board also organized a new Promotion Committee and an Education Committee. The Promotion Committee will be working through our local members to conduct promotional events for ready mix concrete products, and the Education Committee will be working to help TCA provide local and regional educational events for all of our members.

In the area of Advocacy, we have for the first time set a legislative priority to communicate to Tennessee’s elected representatives – that priority is Green Schools and we will be working with some of our existing partners to push this important initiative forward in Tennessee. We are also planning to hold our first-ever legislative reception at the TCA Campus in 2014 to increase awareness of the ready mix and concrete industry as well as to promote the many advantages that concrete offers for sustainability, safety and energy efficiency.

Our efforts will be more effective with your input. Any TCA member is welcome to plug in and help out with any of these efforts. Join us and let’s get busy making our industry better. ❖

Lowering the Chloride Permeability of a TDOT Class D PCC Mixture

Part 1: Developing an Informational Catalog

INTRODUCTION

The Tennessee Department of Transportation (TDOT) is considering a new Class D-LP (lower permeability) portland cement concrete (PCC) mixture specification. Currently, a limit of 1200-coulombs at 56-days, determined as per AASHTO T 277-07 [1], is under consideration. Tennessee Technological University (TTU) researchers are developing an informational catalog to support the possible new specification. The informational catalog is not a recipe book but rather information on mixture designs that have been successful in the laboratory at TTU. Hopefully, the mixture designs and resulting properties would be helpful to industry and municipal designers attempting to produce mixtures that meet the possible new specification. The new informational catalog is by no means exhaustive or exclusive; there are many ways to meet the possible new specification. The three mixtures covered in Part 1 are:

- Type I portland cement / Class F fly ash / Silica fume
- Type I portland cement / Class F fly ash / Metakaolin
- Type I portland cement / Grade 120 slag

Part 2, (Expanding the Informational Catalog) will cover the following four mixtures:

- Type I portland cement / Class C fly ash / Silica fume
- Type I portland cement / Class C fly ash / Metakaolin
- Type I portland cement / Undetermined SCM Replacements
- Type I portland cement / Undetermined SCM Replacements

STATISTICAL BACKGROUND

The goal of the research team was to produce mixtures with a very high probability of meeting the new proposed 1200-coulomb specification for rapid chloride permeability (RCPT). A design target value of 779-coulombs for RCPT at 56-days was calculated using the AASHTO T 277-07 multi-laboratory coefficient of variation of 18% and a three standard deviation safety margin. The safety margin produces a probability of less than one percent that the new proposed 1200-coulomb specification will not be met.

SUPPLEMENTARY CEMENTING MATERIAL DOSAGE CURVES

The RCP of a typical TDOT Class D mixture with 20% Class F fly ash was well established at 1536-coulombs at 56-days based on 100 samples from previous TDOT research at TTU [2]. In the summer of 2011, undergraduate lab assistants Samantha Pittman and Joshua Hogancamp generated dosage curves by substituting

Lowering the Chloride Permeability of a TDOT Class D PCC Mixture

Part 1: Developing an Informational Catalog

supplementary cementing materials (SCM) for portland cement in the mixture. Figure 1 shows the curves for metakaolin and silica fume. The regression equation for each curve was used to determine the dosage of 3.5% (for the 779-coulomb target value) for both silica fume and metakaolin.

A third dosage curve was generated using Grade 120 slag as the only SCM. The dosage curve for slag is shown in Figure 2. No RCP data was available for a straight portland cement (no SCM) TDOT Class D mixture. The regression equation for the curve was used to determine the dosage of 45% (for the 779-coulomb target value) for Grade 120 slag.

TRIAL CLASS D-LP MIXTURE DESIGNS

Table 1 shows the three D-LP trial mixture designs. Table 2 shows comparisons of the three D-LP mixture designs to current TDOT Class PCC requirements.

MATERIALS

Class F fly ash meeting ASTM C 618 [4] was obtained from a regional supplier. Grade 120 ground granulated blast furnace slag meeting ASTM C 989 [5] was obtained from a national cement manufacturer. Type I portland cement [6] was obtained from a

national supplier. An ASTM C 33 [7] No. 57 limestone was obtained from a local quarry. River sand meeting TDOT 903.01 [8] was obtained from a ready mix producer. Chemical admixtures [9] and silica fume [10] were provided by the local representative of an international chemical producer.

PROCEDURE

All D-LP PCC batches were 1.33-cubic feet in size. Ten batches per mixture were produced and tested as per Table 3.

RESULTS AND ANALYSIS

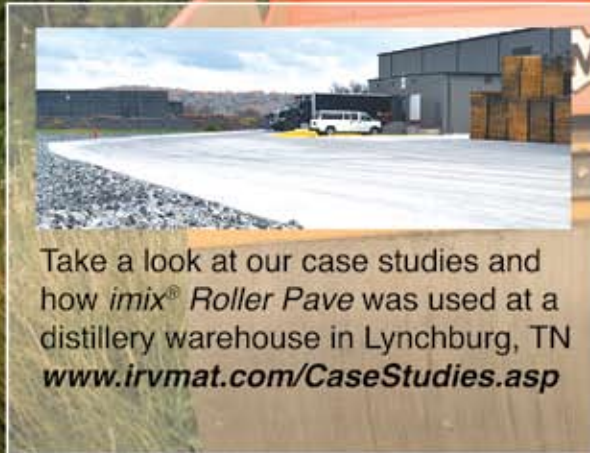

Plastic property results and TDOT 604.03 requirements are shown in Table 4. All plastic properties met TDOT Class D PCC requirements. Table 5 shows comparison values from previous TDOT projects at TTU that will be used for D-LP comparisons in subsequent figures. Table 6 shows RCP results and statistical analysis of D-LP mixtures. The coefficients of variation (COV) met AASHTO T 277-07 requirements for a single operator of 12.3%. Figures 3, 4, 5, 6, and 7 show comparisons of RCP, compressive strength, static modulus of elasticity, ASTM C 642 absorption after boiling, and ASTM C 403 [18] time of set, respectively. The research team attempted to surgically reduce the

Roller Compacted Concrete

For heavy traffic and large rolling equipment

More durable than asphalt, high compressive strengths

Take a look at our case studies and how *imix*[®] Roller Pave was used at a distillery warehouse in Lynchburg, TN
www.irvmat.com/CaseStudies.asp

Placed with a paver, not forms, and roller compacted.

- Minimal down time
- Maximum strength

imix[®] Roller Pave's high density and low absorption allows very little moisture to penetrate the surface, greatly reducing the possibility of potholes due to freeze/thaw cycles.

2617 Grandview Avenue
Nashville, TN 37211

Relative Cost	Least	Most	Middle
How "green" is it?	Most	Middle	Least
How different is it from TDOT Class D?	Very	Not Much	Not Much
Main Advantage	Cheap & Green	Very Easy	Very Easy
Main Disadvantage	Must have Slag Silo	Expensive	Expensive

by L. K. Crouch, Aaron Crowley, Lee Rogers, Heather P. Hall, and Daniel Badoe

Lowering the Chloride Permeability of a TDOT Class D PCC Mixture

Part 1: Developing an Informational Catalog

AASHTO T 152-05. “Standard Method of Test for Air Content of Freshly Mixed Concrete by the Pressure Method”. American Association of State Highway and Transportation Officials. Standard Specifications for Transportation Materials and Methods of Sampling and Testing Part 2A. 2008.

AASHTO T 22-07. “Standard Method of Test for Compressive Strength of Cylindrical Concrete Specimens”. American Association of State Highway and Transportation Officials. Standard Specifications for Transportation Materials and Methods of Sampling and Testing Part 2A. 2008.

ASTM C 469-02. “Standard Test Method for Static Modulus of Elasticity and Poisson’s Ratio of Concrete in Compression.” American Society for Testing and Materials. **Annual Book of ASTM Standards** Vol. 4(2).2006. pp.262-265.

ASTM C 642-97. “Standard Test Method for Density, Absorption, and Voids in Hardened Concrete.” American Society for Testing and Materials. **Annual Book of ASTM Standards** Vol. 4(2).2006. pp. 341-343.

ASTM C 1231-00. “Standard Practice for Use of Unbonded Caps in Determination of Compressive Strength of Hardened Concrete Cylinders.” American Society for Testing and Materials. **Annual Book of ASTM Standards** Vol. 4(2).2006. pp.654-658.

ASTM C 403-08. “Standard Test Method for Time of Setting of Concrete Mixtures by Penetration Resistance¹.” American Society for Testing and Materials. **Annual Book of ASTM Standards** Vol. 4(2). 2011. pp.244-250.

ASTM C 1064 /C 1064-08. “Standard Test Method for Temperature of Freshly Mixed Hydraulic-Cement Concrete¹.” American Society for Testing and Materials. **Annual Book of ASTM Standards** Vol. 4(2). 2011. pp.571-573.

ACKNOWLEDGEMENTS

The authors wish to gratefully acknowledge the support of the Tennessee Department of Transportation and the Federal Highway Administration. Special thanks to Heather Hall, Gary Head, Jamie Waller, and Bill Trolinger. We also wish to thank Frank Lennox of Buzzi-Unicem, Mark Niemuth of Lafarge North America, and Denny Lind of BASF for their extensive donations of portland cement, slag, chemical admixtures and silica fume to the project. The authors appreciate the procurement help provided by Alan Sparkman and the Tennessee Concrete Association.

In addition, the authors would like to thank Jeff Holmes, Mark Davis, and Perry Melton for their patience and skill in fabrication, maintenance, and repair of the equipment. We would also like to thank Stephan Charles, Sarah Dillon, Paige Harris, Kayla Kelly, Samantha Pittman, and Joshua Hogancamp for their help with the project. Further, we appreciate the support of the Tennessee Technological University Department of Civil and Environmental Engineering. Finally, the authors appreciate the administrative and information technology support provided by the Tennessee Technological University Center for Energy Systems Research, particularly Tony Greenway, Etter Staggs, and Linda Lee.

AUTHOR INFORMATION

L. K. Crouch, Ph.D., P.E. is a professor of Civil Engineering at Tennessee Technological University.

Aaron Crowley, M.S., E.I. is a civil engineering doctoral student at Tennessee Technological University.

Lee Rogers is a civil engineering graduate student pursuing an M.S. at Tennessee Technological University.

Heather P. Hall, P.E. is Assistant Engineering Director of Tennessee Department of Transportation Materials and Tests Division.

Daniel Badoe, Ph.D. is a professor of Civil Engineering at Tennessee Technological University. ❖

Placing Pervious Concrete

Pervious Concrete Allows Rainwater to seep into the ground. It is instrumental in recharging groundwater and reducing storm water runoff.

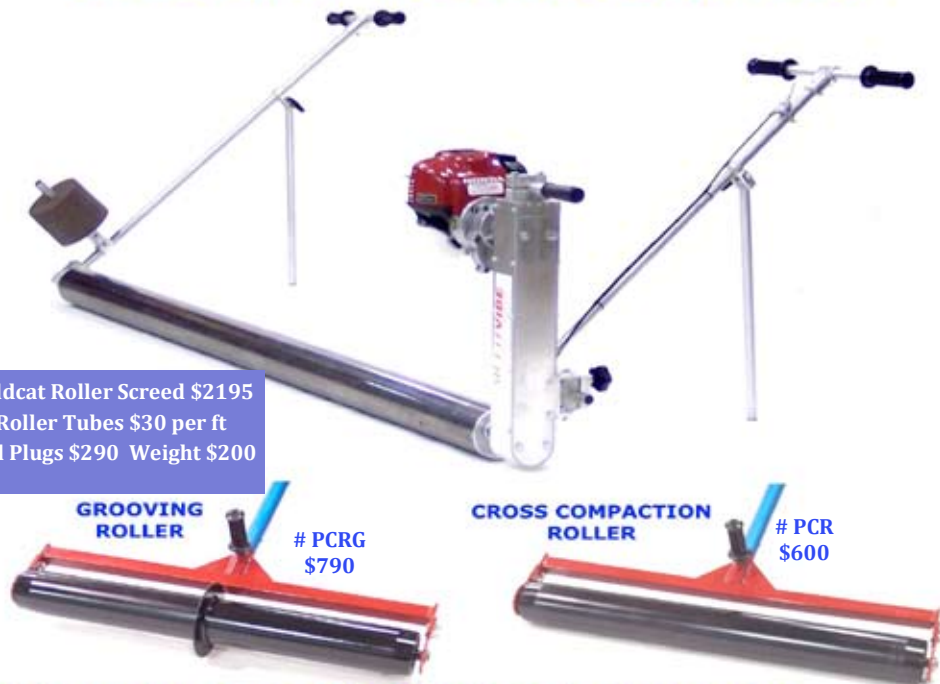

**Pervious is a Special Mix...
It Requires Special Tools to Place It**

WILDCAT ROLLER SCREED

Wildcat Roller Screed \$2195
Roller Tubes \$30 per ft
End Plugs \$290 Weight \$200

GROOVING
ROLLER

PCRG
\$790

CROSS COMPACTION
ROLLER

PCR
\$600

COMPLETE PERVIOUS PACKAGE

"The Wildcat Screed has become my preferred placement method because of it's lightweight, easy to use, and produces a great finish."

Sarah Egan
TN Concrete Association
NRMCA Certified Pervious Concrete
Installer

The Wildcat Roller Screed is the easiest to use on the market and the most economical. It is also an ideal tool for concrete sidewalks, walking trails and golf cart paths.

We welcome comparison to any other brands.

TCA Services & STAFF

The Tennessee Concrete Association (TCA) was founded in 1986 to promote the increased use of ready mixed concrete in Tennessee. Our mission statement is: "The TCA is the unified voice for the concrete industry to improve our image and awareness through advocacy, promotion and education that support our members, our community, and our future." We work to fulfill this mission in all of our activities. We invite you to join us in building a concrete industry we can all be proud of.

Supported primarily by membership dues, the association is governed by a 15 member board of directors elected annually by members. The board includes 10 ready mixed producer members who direct local promotional programs in each of our three regions.

2013 TCA PROGRAMS

Promotion

Annual Convention – This event brings all members together to celebrate the year's accomplishments.

Concrete Conference – Held each year to update architects & engineers on current concrete practices.

Tennessee Concrete Magazine – Published 3-4 times annually.

Membership Directory – Published annually with information advertising your company.

E-Newsletter – To keep you informed of Association programs, industry activities and promotional events.

Concrete Excellence Awards – Design Construction and Environmental awards.

Product Demonstrations – Decorative, Pervious, Insulated Concrete Forms, Ultra-thin Whitetopping, & Flowable Fill.

Literature Development – Statewide High School Concrete Essay Contest.

Product Promotion Kits – Kits available for sales helps.

Trade & Home Show Displays

TCA Website – www.tnconcrete.org and the Intranet for up-to-the minute calendar events.

Video & Technical/Promotional Literature Library – Maintained as a members resource.

Training and Certification

- ACI Field Testing Technician, Grade 1
- ACI Flatwork Finisher & Technician
- ACI Concrete Laboratory Testing Technician Grade 1 & 2
- ACI Concrete Construction Special Inspector
- ACI Concrete Strength Testing Technician
- NRMCA Certified Driver Training
- NRMCA Certified Concrete Production Technologist
- NRMCA Pervious Installer Certification
- NRMCA Certified Concrete Sales Professional

CIM UPDATE

by Dr. Heather J. Brown

A great YouTube video on their three days at MTSU— www.youtube.com/watch?v=z0TF9KG59LQ

Middle Tennessee State University hosted the first ACE Mentor Camp for high school students this summer. Dr. Heather Brown in the Concrete Industry Management Department, Mr. Tom Gormley in Commercial Construction Management and Dr. Janice Brickey in Interior Design collaborated to inspire fifteen students to pursue futures in Architecture, Construction or Engineering (ACE). The group spent three full days at MTSU and stayed in the dorms with MTSU student chaperones. They learned a little about a variety of different areas, in CIM

they learned about the components of concrete and competed in a concrete cube competition. They were exposed to Physics, Art, and the Recording Industry Departments, Mechanical and Electrical Engineering Technology and Revit. They also took a behind the scenes tour of the Embassy Suites in Murfreesboro, Roscoe Brown, and the new MTSU Science Building. The students, professors and chaperones for the group all had a great time and positive experience. We look forward to having ACE students back to MTSU next summer!
