Roller Compacted Concrete

For heavy traffic and large rolling equipment

More durable than asphalt, high compressive strengths

Take a look at our case studies and how *imix*[®] Roller Pave was used at a distillery warehouse in Lynchburg, TN
www.irvmat.com/CaseStudies.asp

A large orange roller compactor is shown in operation on a concrete surface. The machine has the number "241873" on its side and "IM" on its front. It has two large, heavy-duty rollers. The background shows a construction site with other equipment and utility poles.

Placed with a paver, not forms, and roller compacted.

- Minimal down time
- Maximum strength

imix[®] Roller Pave's high density and low absorption allows very little moisture to penetrate the surface, greatly reducing the possibility of potholes due to freeze/thaw cycles.

ADD YOUR VOICE TO THE DISCUSSION

Bobby Crass
2016 TCA President

I encourage all of our TCA members to get involved with our association. Your involvement pays dividends for both you and for your organization, and it helps us make our industry better.

As a longtime TCA member and your current TCA President, please allow me to welcome you to the 2016 Membership Directory edition of Tennessee Concrete magazine. Take note of those companies who are supporting our association with their membership and reward them with your business in the coming year.

I would also like to encourage all of our TCA members to get involved with our association. Your involvement pays dividends for both you and for your organization, and it helps us make our industry better. I have three specific requests for your participation as we enter the second half of 2016.

First, I want to encourage all of our ready mix producer members along with our materials supplier members to attend your local TCA/TDOT Regional Liaison Meeting. TCA and TDOT partner to hold these regional meetings at each of the four TDOT regional headquarters and we need to step up the concrete industry's participation in these important sessions. These meetings are local (Knoxville, Chattanooga, Nashville and Jackson) and they only last about two hours. Find out when your regional meeting is scheduled and be sure to attend.

Second, I am asking for your support with this year's Foundation Golf Outing on September 14 in Franklin, Tenn., at Forrest Crossing Golf Club. I shared in my last column about the positive impact that the Concrete Industry Management has made on my family, and I ask that you help support this important TCA event with your presence and your financial support.

Third, I want to mention TCA's Legislative Breakfast series that will be taking place later this year. We held six such breakfast events last year with 15 state legislators attending. Dates and locations for these breakfasts will be forthcoming later this summer but we need your help to drive attendance of both industry people and your local state legislators. Two thousand seventeen will likely be our best chance in many years of increasing funding for vital Tennessee infrastructure, and all of us need to add our voice to this discussion.

Thank you for your continuing support of TCA!

-Bobby Crass

KEEPING YOU UP-TO-DATE

Alan Sparkman
Executive Director

Please keep this copy of our magazine handy and refer to it throughout the year.

TCA also maintains a searchable online directory.

Visit TCA's Facebook page and "Like" our page.

Two important concrete upcoming events in September:

- 14-TCA's annual Foundation Golf Outing
- 17-NRMCA's Fall Concrete Works meeting

Welcome to the 2016 edition of TCA's membership directory. In addition to a listing of our members and their services, this issue of the magazine contains useful information about certifications along with some solid technical content. Keep this issue handy throughout the coming year and be sure to consult your directory anytime you find yourself in need of products or services that another TCA member can provide—*members should do business with members!*

In addition to this printed directory, TCA also maintains a searchable online directory that you can access from anywhere by visiting: www.tnconcrete.org. We have just introduced a brand new website (same address, different site) so please visit us online and see what you think. The online directory allows you to search using a number of different variables, and you can even access our members via an interactive map if you prefer a more visual interface.

I also invite you to visit TCA's Facebook page and to "Like" TCA. This is a great way to keep up on events, people and concrete industry information—you can see our page here: <https://www.facebook.com/tnconcrete/>.

As I write this article, we are close to finishing up a large pervious concrete placement and research project in Murfreesboro. Most of June has been spent placing and testing pervious concrete mixes, along with educating ready mix producers, contractors, stormwater officials and potential customers about this important concrete product. Thanks to Mr. John Manning (III and IV) for making their site available for this extensive research project, and thanks to our research partner Dr. Heather Brown and her staff for all their help with the testing. Results will continue to be generated as the summer progresses and as the project enters Phase Two where both pervious concrete and conventional concrete pavements will be subjected to various

deicing chemicals to see how different mixes and different products perform under chemical attack. Look for a comprehensive summary of the project and test results in the fall of 2016. By the way, you can see some photos and even some video taken at the project site by visiting either our website or our Facebook page. Special thanks to TCA contractor member Nsite and Mr. Bill Smith for providing an experienced pervious crew to handle our placement on June 29 for the event.

Finally, I want to mention two important concrete industry events coming up in September—I'll mention them in chronological order. First is TCA's annual Foundation Golf Outing that supports our CIM scholarship program at MTSU as well concrete-focused research projects here in Tennessee. We are planning some new features for this year's event on Wednesday, September 14, and we need your help in attracting new players and new sponsors for the event. The outing will be held at Forrest Crossing Golf Club in Franklin and the fun begins with lunch at 11:30 a.m. (Central). Please mark your calendar and start putting your foursome together!

Next, I want to put in a plug for NRMCA's Fall Concrete Works meeting that will be taking place in Nashville beginning on September 17. We are excited to have NRMCA bringing this event to Tennessee and I want to urge all of our TCA members to make plans now to attend this conference. The national truck rodeo competition will be part of this event along with excellent speakers and numerous educational sessions. If you consider yourself to be part of the concrete industry, you owe it to yourself (and your industry) to attend this meeting. Visit NRMCA's website (www.nrmca.org) for more information and to register.

Commitment
is in everything we do

At Lafarge, our commitment goes far beyond the raw materials we produce. We bring together the best solutions and materials to build more durable, compact and connected cities. And when you build better cities you get buildings, roads and infrastructure that truly reflect the changing needs of today's communities.

It's this kind of ongoing dedication that's an integral part of the Lafarge culture. And it shows. Whether it's our focus on safety, the well-being of our employees, or the satisfaction of our customers – it's all about ensuring a better quality of life for everyone involved.

Determining Concrete Chloride Permeability More Efficiently

PART 1: A NEW SHERIFF IN TOWN?

OVERVIEW

The Tennessee Department of Transportation (TDOT) is considering two new technologies to determine concrete chloride permeability more efficiently:

- A. Surface Resistivity AASHTO TP 95-11 [1]
- B. Accelerated Curing as per AASHTO TP 95-11 [1] and ASTM C 1202-12 [2]

This paper is the first in a three part series of technology transfer articles. We hope that you find the information presented helpful in mixture design and evaluation. In Part 1, surface resistivity basics, statistical comparisons, logistical comparisons and correlations between surface resistivity and rapid chloride permeability will be examined. Subsequent articles will examine:

2. Accelerated vs. Normal Curing – Choosing a Curing Method
3. Possible TDOT Surface Resistivity Specifications and Mixture Design Suggestions

INTRODUCTION

AASHTO TP 95-11 surface resistivity (SR) and AASHTO T 277-07 [3] rapid chloride permeability (RCP) both provide an electrical indication of concrete's resistance to chloride ion penetration. SR measures the electrical resistance while RCP measures the charge passed; therefore, the scales are inverted as shown in Table 1. The categories (column 1) are independent of testing age. The commonly used Wenner probe (shown in Figure 1) incorporates four equally spaced electrodes that apply a voltage between the outer probes while the inner probes measure the potential difference. The handheld device then converts the measured electrical resistance into an apparent resistivity which has been correlated with chloride ion penetration.

Figure 1: Schematic of AASHTO TP 95-11 Surface Resistivity

CONDUCTING A SURFACE RESISTIVITY TEST

The brief summary presented here will use 4x8-inch cylinders, although 6x12-inch cylinders are allowed by AASHTO TP 95-11. This summary lacks sufficient detail and the reader is referred to AASHTO TP 95-11 for detailed instructions on how to conduct the test. Each set for the test method is comprised of three cylinders. The top of the cylinders are marked at every 90° as shown in Figure 2. After removal from the moist room or curing tank, excess water is blotted off the cylinder and placed in a non-conductive sample holder (see Figure 3). The contact points of the electrodes are moistened prior to each reading. Readings are then taken around the cylinder specimen at 0°, 90°, 180°, and 270° twice, averaging the results for that specimen (see Figure 4). A correction factor of 1.1 is then multiplied by the average of the readings for the lime-water curing condition (see Table 2).

TABLE 1. CATEGORIES FOR SURFACE RESISTIVITY AND RAPID CHLORIDE PERMEABILITY

Figure 4: Surface Resistivity Readout

COMPARISON OF SR AND RCP TEST METHODS

Statistical Comparison

Table 3 shows a comparison of AASHTO allowable coefficients of variation for each method. AASHTO allowable coefficients of variation indicate that SR is clearly better. However, Tennessee Technological University (TTU) data (see Table 4) shows that there is no clear winner (2-1 SR with 3 no contests).

Logistical Comparison

RCP requires sawing of 2-inch slices from 4x8-inch cylinders (see Figure 5), epoxy coating of the 2-inch slices (see Figure 6), and chemicals in the cell reservoirs during testing (see Figure 7). SR requires no preparation or additional materials. Table 5 shows an extensive logistical comparison of the test methods and indicates a logistical knockout in which SR is a clear winner in every category.

Determining Concrete Chloride Permeability More Efficiently

PART 1: A NEW SHERIFF IN TOWN?

Figure 7: Chemical Reservoirs in RCP Test Cells

CORRELATION BETWEEN RCP AND SR

SR and RCP both provide an electrical indication of concrete's resistance to chloride ion penetration and therefore should be related. The research team reasoned that correlations would be more widely applicable if based on larger and more diverse data sets. Therefore, an attempt was made to maximize the amount and diversity of data on which answers were based. One provision made was that the data diversity would be limited to mixtures TDOT would consider using for bridge decks (no water-to-cementing materials ratio (w/cm) > 0.40 , no exotic materials, etc.). A summary of all available data sets is provided in Table 6. Brief descriptions of two selected studies are provided in the next paragraph.

The unpublished TTU aggregate variable study was a preliminary attempt to determine the effect of coarse and fine aggregate type on RCP and SR. NASCAR legend Richard Petty said, "You've got to have some slow guys to make the fast guys look fast." The TTU high permeability Class D study was an attempt to provide some "slow guys." Specifically, to determine how high RCP would rise (and how low SR would sink) if the worst available TDOT approved choices were made for the coarse aggregate and portland cement-supplementary cementing materials (PC-SCM) matrix. It is important to note that the w/cm used met TDOT requirements. The worst available category referred to the poorest performing TDOT approved aggregates in the TTU aggregate variable study.

Figure 8 below shows all 202 TTU data points compared to an equation derived from the AASHTO test method category limits (see Table 1). The TTU data was regressed against the corresponding values generated by the AASHTO equation using the SR values as the independent variable. The intercept term was constrained to a value of 0. The t-test was then used to test the null hypothesis of the slope parameter being equal to 1. Using a 5% level of significance, the equations compared were significantly different from each other. However, on average, TTU data was only 3.7% higher than predicted by the AASHTO equation.

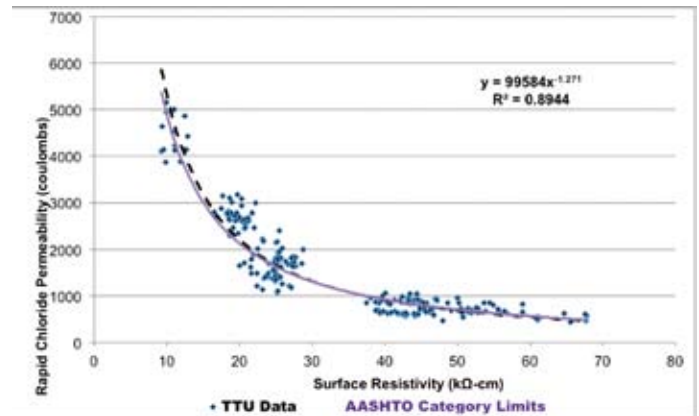

Figure 8: Comparison of All TTU Data with Equation from the AASHTO Test Method Category Limits

Table 7 below shows TTU correlations of SR and RCP with various data subsets as well as three reference correlations:

1. A correlation equation based off the AASHTO test method category limits (see Table 1)
2. A correlation from the Federal Highway Administration (FHWA) Turner-Fairbank Laboratory [4]
3. A correlation from the Louisiana Transportation Research Center (LTRC) [5]

All correlations have coefficients of determination greater than 0.89, indicating strong relationships between SR and RCP.

TABLE 7. COMPARISONS OF SR-RCP CORRELATION COEFFICIENTS

CORRELATION SOURCE	CORRELATION EQUATION	CORRELATION COEFFICIENT
AASHTO Test Method Category Limits	$RCP=79074(SR)^{-1.206}$	0.9999
FHWA Turner Fairbank Laboratory	$RCP=98441(SR)^{-1.35}$	0.9200
LTRC	$RCP=39647(SR)^{-0.944}$	0.8922
All TTU Data	$RCP=99584(SR)^{-1.271}$	0.8944
TTU 91-day Data	$RCP=125451(SR)^{-1.316}$	0.9168
TTU 56-day Data	$RCP=104446(SR)^{-1.253}$	0.9601
TTU 56- and 91-day Data	$RCP=114533(SR)^{-1.285}$	0.9524
TTU 28-day Accelerated Data	$RCP=81780(SR)^{-1.299}$	0.9772

TABLE 8. SR VS. RCP SUMMARY

PARAMETER	ADVANTAGE
Accuracy	Not Known
Variability (Precision)	Slight Edge SR (AASHTO Allowable)
Cost	Clearly SR (more than 4:1)
Time	Clearly SR (minutes vs. days)
Ease of Operation	Clearly SR
Safety	SR (no chemicals or sawing)
Overall	Clearly SR

Determining Concrete Chloride Permeability More Efficiently

PART 1: A NEW SHERIFF IN TOWN?

CONCLUSIONS

There is a new sheriff in town—SR is clearly superior to RCP as shown in Table 8.

DISCLAIMER

The opinions expressed herein are those of the authors and not necessarily the opinions of the FHWA, the TDOT, the LTRC, or the Tennessee Concrete Association (TCA).

ACKNOWLEDGEMENTS

The authors wish to gratefully acknowledge the support of the TDOT and the FHWA. Special thanks to Gary Head, Jamie Waller, and Bill Trolinger.

We also wish to thank Frank Lennox of Buzzi-Unicem, Meagan Dangle of Lafarge North America, and Denny Lind of BASF for their extensive donations of portland cement, slag, chemical admixtures and silica fume to the project. The authors appreciate the procurement help provided by Alan Sparkman and the TCA.

In addition, the authors would like to thank Mark Davis and Perry Melton for their patience and skill in fabrication, maintenance, and repair of the equipment. We would also like to thank Lee Rogers, Jacob Brooks, and Caleb Smith for their help with the project.

Further, we appreciate the support of the TTU Department of Civil and Environmental Engineering.

Finally, the authors appreciate the administrative and information technology support provided by the TTU Center for Energy Systems Research, particularly Tony Greenway, Etter Staggs, and Linda Lee.

TCA Services & STAFF

The Tennessee Concrete Association (TCA) was founded in 1986 to promote the increased use of ready mixed concrete in Tennessee. Our mission statement is: "The TCA is the unified voice for the concrete industry to improve our image and awareness through advocacy, promotion and education that support our members, our community, and our future." We work to fulfill this mission in all of our activities. We invite you to join us in building a concrete industry we can all be proud of.

Supported primarily by membership dues, the association is governed by a 15 member board of directors elected annually by members. The board includes 10 ready mixed producer members who direct local promotional programs in each of our three regions.

Past TCA PRESIDENTS

1986-1987
Reid Brown, PH.D.
Vulcan Materials
Chattanooga

1988
Richard Jones, Jr.
Southdown, Inc.
Knoxville

1989
Bob Mayfield
Forcum-Lannom
Dyersburg

1990
Craig Kirchoff
Lone Star Industries
Nashville

1991
Joe Fowler
American Limestone Co.
Knoxville

1992
Ernie Walker, Sr.
Transit-Mix Concrete
Johnson City

1993-1994
E.H. (Sonny) Garrott III
Garrott Brothers
Continuous Mix
Galatin

1995-1996
Joe Bigford
City Concrete Co.
Jackson

1997-1998
Carl Storms
Concrete Materials Inc.
Morristown

1998-1999
Joe Fulks
Harper Construction
Shelbyville

1999-2000
Mike Carrier
Carrier Concrete
Memphis

2000-2001
Walter Law
Ready Mix Concrete
Maryville

2001-2002
Bob Haldrup
Irving Materials, Inc.
Nashville

2002-2003
John Loven
Loven Ready Mix
Greeneville

2003-2004
Steve Herron
Metro Ready Mix
Nashville

2004-2005
Greg Garren
Union Concrete
Maynardville

2005-2006
Jim Hughes
Builders Supply Co.
Cookeville

2006-2007
Rick Odle
Southern Concrete
Products
Jackson

2007-2008
Dennie Underwood
Blalock Ready Mix
Sevierville

2008-2009
John Curtis
Irving Materials, Inc.
Nashville

2009-2010
Phillip Palczer
City Concrete
Memphis

2010-2011
Andrea Childress
Childress Concrete Co.
Lewisburg

2011-2012
Steve Smith
A&W Ready Mix Concrete
Kodak

2012-2013
Mike Zagula
Metro Ready Mix Concrete
Co.

2013-2014
Derris Johns
Mid-South Concrete

2014-2015
Bate Bond
B.T. Redi-Mix

Our Board of DIRECTORS

President

BOBBY CRASS
C&C Concrete Products, Inc.

Vice President

TONYA ALEXANDER
Irving Materials, Inc.

Secretary/Treasurer

COLE DODDS
Southern Concrete Products

Ready Mixed Directors

JEREMY COLE
Ready Mix USA

FRED JOSEPH
Sequatchie Concrete

TREVOR MCFARLIN
Ready Mix USA

CARL STORMS
Harrison Construction

WALTON WILLIAMS
River City Concrete

Associate, and
Affiliate Directors

Associate:

TRAY BREITBARTH
Lehigh Cement

BILL HUNT
Fly Ash Direct

STEVE MCINTIRE
Vulcan Materials

Affiliate:

MAX STEPHENS
Stephens Mfg.

2016 TCA Membership Directory

Ready Mixed Concrete Producer Members

A&W Ready Mix, LLC

P O Box 578
Kodak, TN 37764
Primary Contact: Steve Smith
Phone: (865) 932-4010
Fax: (865) 365-2734
Website: awreadymix.com
Product/Services: Ready Mix Concrete Pumping, Brick, Block, Trucking, Excavating, Masonry Sand & Rock, NRMCA Certified Plant

CIM UPDATE

by Dr. Heather J. Brown

MTSU CIM is studying

This year, MTSU CIM is the most traveled department in the College of Basic & Applied Sciences!

MTSU CIM spent Spring Break 2016 along with the other three CIM schools left the U.S. to be able to put theory into practice on a project in England. Students traveled to London and then on to the National Construction College in Bircham Newton, England, to participate in Constructionarium. During their week, two students from California State Chico, two students from NJIT, five students from Texas State and six students from MTSU along with Dr. John Schemmel from TX State and Mr. Jon Huddleston and Dr. Marcus Knight from MTSU constructed a scaled down replica of the Brewery Wharf Footbridge. The group was required to hold pre-con meetings each morning, bid and track expenses maintaining a profit and safe working conditions, conduct site layout and surveying, erect and tie rebar, build formwork, and pour and erect the bridge. Although long days with hard work, they were able to spend a day in London as tourists. Students from NJIT and MTSU were the first U.S. schools to participate in Constructionarium back in summer 2014 and we still maintain that title as of this spring.

Next, for the second year in a row, nine students from MTSU CIM traveled to the Dominican Republic to build concrete prisms to be placed in the ocean as artificial reef. The students spent 12 days in Sosua on the northern coast building and pouring up to four prisms per day. Several students were able to scuba dive with the local shop, Northern Coast Diving, to view the 19 prisms in the water from last year's project. At the end of the week, a few members of the group also formed and poured a concrete CIM to serve as a marker on the reef for years to come! Special thanks to Sosua by the Sea for allowing us to take over their back patio to work and to Northern Coast Diving for helping us acquire materials and for placing the prisms in the next few weeks.

abroad!

Lastly, for eight weeks this summer, eight MTSU CIM students are interning in United Arab Emirates. The group is staying and working at Nael Cement Products in Al-Ain, about ninety minutes from Dubai and Abu-Dhabi. Not only is it a great cultural experience, but the students are also getting a variety of industry experience, too. The company they are working with is unique as they have multiple divisions in the one location, including a precast plant; ready-mix plant; cement manufacturing plant; aluminum, glass and steel divisions; and a contracting division as well. Several of the students have had internships in the States and are able to shed light on the differences in the processes or equipment used overseas to the group. There are lots of night pours due to the 115 plus degree temperatures each day! Students are using their weekends wisely to explore the area like going to Dubai for indoor snow skiing, swimming in the Persian Gulf, and visiting the top floor of the Burj Khalifa. Students are interning for another month. You can follow their adventures online at <http://mtsucimuae2016.wordpress.com>.
