2023 TCA President

CALLING ALL MEMBERS!

Working to
Increase our
Membership!

New members
that join in 2023
will receive
special
incentives.

Welcome to the Directory issue of *Tennessee Concrete magazine*. TCA members are the foundation that makes all the work of TCA possible, so thank you to all of our member companies! If your company is not yet a member of TCA, please let me be the first to invite you to join. We are working to increase our membership and have special incentives for companies who join TCA in 2023. Now is the time for you to add your voice to the concrete chorus in Tennessee!

One reason you should be a member (and there are many!) is the great work that TCA is doing on behalf of our entire industry to attract people of all ages to careers in concrete. TCA is a Founding Council member for **BE PRO BE PROUD** - Tennessee. This is a statewide effort on the part of a broad coalition of business and industry groups to get the word out about the many outstanding career opportunities available in the construction and manufacturing trades. The program will officially launch on September 25 in Gallatin, Tenn., where we will show off a unique tractor-trailer packed with simulators and Virtual Reality (VR) experiences related to at least 15 different careers — everything from heavy equipment operators to CDL driving and numerous other trades. The truck will be on the road all across Tennessee bringing a taste of these exciting opportunities to high school students and local communities.

TCA is also working to introduce a concrete curriculum to high schools across the Volunteer State. This curriculum is called *Skate 4 Concrete* and is a partnership between the concrete industry and skate boarders. Skaters already appreciate the many benefits that concrete brings to their favorite pastime, and this curriculum provides basic knowledge about how concrete is made, and how it can be used to create all kinds of structures, including local skateparks. TCA will be sponsoring a statewide contest for high school classes that complete this curriculum and then build their very own miniature concrete skatepark. Entries will be judged by attendees at TCA 2024 Annual Convention next February.

For more information about bringing either of these programs to your local area, you can visit the TCA website at www.tnconcrete.org/cte-resources.

Thanks!

COMPLETE PERVIOUS PACKAGE

"The Wildcat Screed has become my preferred placement method because of it's lightweight, easy to use, and produces a great finish."

Sarah Egan
TN Concrete Association
NRMCA Certified Pervious Concrete
Installer

The Wildcat Roller Screed is the easiest to use on the market and the most economical. It is also an ideal tool for concrete sidewalks, walking trails and golf cart paths.

We welcome comparison to any other brands.

Executive Director

On Track for Four
Record Production
Years—In A Row!

TCA is working hard
to increase the
workforce.

Why?

To support record
levels of
production.

How?

1. **BE PRO BE PROUD**

Tennessee program

2. *Skate 4 Concrete*

curriculum

IT'S WORTH REPEATING!

Tennessee set yet another annual production record in 2022, marking three years in a row of record concrete production in our state. Our total yardage for 2022 was 9,258,000 cubic yards, up about 1.5 percent over 2021, in spite of severe cement allocations and other supply chain issues for the concrete industry. Year 2021 was the first time ever that Tennessee production exceeded 9 million cubic yards. It followed, then, record production of 8,383,000, in 2020. That was the first year, since 2007 and the Great Recession, that our production was over 8 million cubic yards.

FOR 2023 QUARTER ONE: Tennessee concrete production was up over 12 percent over first quarter 2022. We could be on track for FOUR record production years in a row!

As President Parham noted in her column, TCA is working hard to increase the workforce that our industry needs to support our record levels of production. Both the **BE PRO BE PROUD** - Tennessee program and TCA's launch of the *Skate 4 Concrete* curriculum to high schools across the state will get a positive concrete message in front of the next generation of concrete people. If you are already a TCA member, be sure to check out our Workforce page at <https://www.tnconcrete.org/work-in-concrete> for an idea of what TCA is doing to bring potential employees directly to your *virtual* doorstep. If you browse the page, you will see that some of our members have taken a few minutes to provide us with some extra information that we have used to make their listings on the potential employers page *pop out*. We are happy to do the same for you! Just complete the information you find here at <https://form.jotform.com/230955801111043>.

TCA continues our work to support the great workers that we already have through our extensive ACI certification program. In 2023, we have created an ongoing webinar series to bring knowledge to our members on an array of topics vital to the success of your business. You can see the "TCA Events" page at <https://www.tnconcrete.org/tca-events> for the latest in both our virtual and in-person events. The website page is designed to equip and acquaint you and your team with an outstanding network of concrete professionals who belong to TCA.

If you are not a current TCA member, let me echo our President's invitation for you to join and support the industry that supports you. There has never been a better time to join, and we need you to add your energy to TCA's efforts to build a more successful Tennessee concrete industry. It's easy to do! Just click here to become a TCA member at <https://form.jotform.com/202806347406150>.

Don't forget! Our *2024 Annual Concrete Design Awards* competition will be opening soon. Start gathering your information to enter your outstanding projects!

Commitment
is in everything we do

At Lafarge, our commitment goes far beyond the raw materials we produce. We bring together the best solutions and materials to build more durable, compact and connected cities. And when you build better cities you get buildings, roads and infrastructure that truly reflect the changing needs of today's communities.

It's this kind of ongoing dedication that's an integral part of the Lafarge culture. And it shows. Whether it's our focus on safety, the well-being of our employees, or the satisfaction of our customers – it's all about ensuring a better quality of life for everyone involved.

TCA Services & STAFF

The Tennessee Concrete Association (TCA) was founded in 1986 to work on behalf of the concrete industry across Tennessee. Our mission statement is: "The TCA is the unified voice for the concrete industry to improve our image and awareness through advocacy, promotion and education that support our members, our community, and our future." We work to fulfill this mission in all of our activities. We invite you to join us in building a concrete industry we can all be proud of. Supported by membership dues and program income, TCA is governed by a 12 member Board of Directors representing all three membership categories (Producers, Associates, and Affiliates).

2023 TCA PROGRAMS

Annual Convention – Brings all members together to celebrate the year's accomplishments and to learn about the latest issues.

Tennessee Concrete Magazine – Published 3 times annually with research reports and current industry articles.

Membership Directory – Published annually with information advertising your company.

Member Updates – Throughout the year (via email), to keep you informed of Association programs, industry activities and promotional events.

Concrete Excellence Awards – Design, Construction and Environmental awards for projects and plants across Tennessee.

Product Demonstrations & Seminars – Decorative, Pervious, Insulated Concrete Forms, Whitetopping, Flowable Fill and more

Statewide High School Concrete Essay Contest Trade Show Displays

Concrete Career Academy – Our online learning system offers prep courses to help concrete professionals prepare for certification courses in flatwork, and more. <https://www.pathlms.com/ccca>

TCA Website – www.tnconcrete.org and visit us on Facebook at <https://www.facebook.com/tnconcrete/>

Training and Certification – Exams and training were also offered in the following:

ACI Certification Programs

- Aggregate Testing Technician – Level 1
- Aggregate Testing Technician – Level 2
- Aggregate/Soils Base Testing Technician
- Concrete Field Testing Technician – Grade 1
- Self-Consolidating Concrete Testing Technician
- Concrete Strength Testing Technician
- Concrete Laboratory Testing Technician – Level 1
- Concrete Laboratory Testing Technician – Level 2
- Masonry Field Testing Technician
- Masonry Laboratory Testing Technician
- Post-Installed Concrete Anchor Installation Inspector
- Concrete Construction Special Inspector
- Concrete Transportation Construction Inspector
- Nondestructive Testing Specialist – Concrete Strength
- Shotcrete Inspector
- Adhesive Anchor Installer
- Concrete Flatwork Associate, Finisher, and Advanced Finisher
- Decorative Concrete Flatwork Finisher and Associate
- Residential Concrete Foundation Technician
- Concrete Quality Technical Manager
- Tilt-Up Supervisor and Technician

NRMCA Certification Programs

- Plant and Truck Certification
- Pervious Concrete Contractor Certification
- Certified Concrete Sales Professional (CCSP)
- Exterior Flatwork Finisher Certification

Training – TCA Staff has over 100 years of combined concrete experience and we provide specific training for several of the certifications listed above. Contact John Pearson, PE directly for more information.

FACULTY STAFF UPDATE

The past year we have seen amazing opportunities for CIM with the opening of the new building and achieving ATMAE accreditation, as well as notable growth for the first time in five years. We have charged forward with a renewed commitment from the CIM National Steering Committee, CIM Patrons, and the administration at Middle Tennessee State University. That has allowed us to restructure CIM and grow a more fruitful marketing and recruiting campaign, while offering current students more experiential learning opportunities and exposure to industry technology. None of this would have been possible without the help and leadership of Kelly Strong, former head of the MTSU School of Concrete and Construction Management. Strong officially retired on July 31 bringing his time with us to a close. We wish him well in a much deserved and relaxed retirement.

Kelly Strong, PhD

Thomas Nicholas, PhD

On August 1 we welcomed Thomas Nicholas as the new Director of the School of Concrete and Construction Management. Nicholas comes to us from the University of North Carolina (UNC) at Charlotte where he previously chaired the Department of Engineering Technology and Construction Management. He received a doctoral degree in Infrastructure and Environmental Systems at UNC Charlotte, 2010; a master's degree in Civil Engineering at West Virginia University, 2001; and a bachelor's of science in Civil Engineering at West Virginia University, 1998, and a bachelor's of science in Civil Engineering Technology at Fairmont State College, 1996.

With the promotion of Kevin Overall to a faculty position in January 2023, we have all been spread a bit thin covering labs in the new building. In May, we were successful in our search for Overall's replacement and were happy to announce that CIM alumnus Cannon Lamb was chosen to manage labs in the new building. Cannon has been busy from day one organizing the labs and preparing for the return of students in late August.

CIM NASA MUREP INTERNS

This summer four students were given the opportunity to intern with the Concrete Industry Management (CIM) program at Middle Tennessee State University. The internship program was funded by the NASA Minority University Research and Education Proj-

CIM NASA MUREP Interns Carlie Mullins, Ashlyne Roeger, Arie Milam, and Claire Mullins touring Stalite facilities in Salisbury North Carolina with Stalite Technical Sales Manager and CIM Alum Natalie Martin

ect (MUREP) which is part of a partnership with Drake State Technical College in Huntsville, Alabama. The program is committed to helping minorities get more involved in university programs related to STEM.

Over the course of ten weeks, the interns spent time with MTSU faculty and industry professionals to develop skills and knowledge required for successful careers in the concrete industry.

The new School of Concrete and Construction Management building has made a tremendous impact on the interns' education. They have been able to utilize technologies in the new building, as well as, new testing equipment. Because of this they have been able to better understand how mixes can be utilized to fit the desired needs for the concrete.

The interns stated, "This internship has really helped us get a jump start on our careers. All four of us can agree that our favorite part of the summer was all the job shadowing opportunities that we got to participate in. We were able to oversee different positions in the industry at companies like Gate Precast, Stalite, Standard Concrete, Servpro, Eco Materials, and Habitat for Humanity. The real-world experience that we took away from those visits was crucial for planning for our futures. We are excited about the endless job opportunities available to us. There is so much potential growth for women in the industry. We are extremely thankful for the opportunities that this internship has presented us."

FRESH DENSITY TESTING: WELL WORTH THE EFFORT

In my years working in the consulting arena, whenever I was tasked with troubleshooting a concrete issue, one of the first things that I would look for on the provided break reports would be the fresh unit weight (density) of the concrete. Many people do not realize the importance of this piece of information. The density result by itself rarely provides the whole story, but along with the other fresh and/or hardened properties it can help contractors, producers, engineers, investigators, and QA/QC personnel make better and more informed decisions.

The measured fresh density can be used to help identify changes in air or water content. Large swings in unit weight may indicate poor batching control or jobsite water additions. Comparison of fresh density to hardened density may provide information on potential air loss during consolidation or help identify where in a structure a particular questionable load may have been placed. The density numbers can also be used to confirm or challenge a questionable air content determination. On more than one occasion I have seen a density result used to quickly identify that an air meter might be providing erroneous information. This can provide the testing technician the opportunity to correct the issue before multiple tests have been performed and reported. These above examples only scratch the surface of how a density result might be used.

So why does it seem that density information is often missing from the test report? I think much of it stems from unfortunate language included in ASTM C31-22 *Standard Practice for Making and Curing Concrete Test Specimens in the Field*. In this standard it is stated that slump, temperature, and air content be performed whenever concrete strength specimens are made. Density is not included in the required list. Although a note acknowledges that some specifications may require density testing, ASTM C31 falls short of making it a requirement. Unfortunately, in our cost competitive and litigious environment, perhaps testing labs are hesitant to provide more testing or information than is absolutely required. Alternatively, since there are rarely acceptance criteria associated

with density for normal weight concrete, perhaps people just do not see the importance of capturing this information.

However, before assuming that density testing is not intended or required, you need to look at the specifications for your project. Even if the specification does not call density testing out directly, it may be invoked through reference specifications. The three specifications below are often referenced in contract documents, and each provides information on density requirements and expectations of the various parties.

- ASTM C94-22a *Standard Specification for Ready-Mixed Concrete* which is written to the producer and the purchaser states that the slump, temperature, **density**, and air content tests shall be performed whenever strength test specimens are molded.
- ACI 301-20 *Specifications for Concrete Construction* which is written to the contractor indicates that the owners testing agency will perform slump, temperature, **density**, and air content testing on concrete sampled for molding strength specimens.
- ACI 311.6-18 *Specification for Testing Ready Mixed Concrete* which is written to the testing laboratory requires that slump, temperature, **density**, and air content testing be performed along with strength specimens.

For concrete with a nominal maximum size of aggregate of 1" or smaller, incorporating density testing should be a relatively simple process requiring minimal additional equipment (a strike-off plate and a scale). Performance of the density test would likely add less than a minute to the overall testing time since the measure would already need to be filled for the air content test. When considering the potential benefit that the density information could provide to all parties, the additional equipment and testing time seem to be worth the cost to the project and, depending on your project specification, may be required despite the language in ASTM C31. ■
