Slag Cement by the Numbers

- ♦ ASTM C989 defines Grades 80, 100, and 120 (Grades 100 and 120 are most common in U.S. markets).
- ♦ Typical replacement rates range from 20–80%, depending on performance objectives.
- ♦ ASTM C595 Type IL contains 5–15% interground limestone

Current industry guidance increasingly focuses on performance specifications and optimizing the entire cementitious system rather than prescribing specific cement or SCM percentages.

CONCRETE MIXTURE DESIGN IS ABOUT BALANCE

Concrete mixture design has always been about balance. Every project requires us to evaluate strength, durability, workability, setting characteristics, constructability, and long-term performance. As the materials available to our industry continue to evolve, that balancing act has become even more important.

One material that continues to prove its value is slag cement.

Ground granulated blast-furnace slag has been successfully used in concrete for decades, but today it is playing an increasingly significant role in helping producers develop high-performance concrete mixtures. As ASTM C595 Type IL cements become the standard across much of North America, slag cement is no longer viewed simply as an optional supplementary cementitious material. It has become an essential component of optimizing today's cementitious systems.

Slag cement is manufactured by rapidly quenching molten iron blast-furnace slag and then grinding it into a fine powder. When used in concrete under ASTM C989, it reacts hydraulically with water while also participating in the secondary reactions that refine the concrete's microstructure. The result is concrete that is denser, less permeable, and often more durable than mixtures produced with portland cement alone.

ASTM C989 establishes three performance grades for slag cement (80, 100, and 120) with Grades 100 and 120 representing most products available in the United States. The grading system is based on relative strength performance compared to a standard portland cement mixture, allowing producers to select the product most appropriate for their performance objectives.

While strength often receives the most attention, the greatest benefits of slag cement are frequently found in durability.

Numerous studies published through ACI, the

Slag Cement Association, and the National Ready Mixed Concrete Association have demonstrated slag cement's ability to reduce chloride permeability, improve resistance to sulfate attack, mitigate alkali-silica reactivity, and reduce the heat of hydration in mass concrete placements. These characteristics help extend service life while reducing maintenance requirements for transportation infrastructure, commercial buildings, water treatment facilities, and other critical structures.

From a quality control perspective, slag cement also provides greater flexibility when proportioning mixtures.

Every concrete producer understands that no two materials are identical. Cement chemistry changes. Aggregate properties vary. Seasonal temperatures influence hydration and setting behavior. Customer expectations continue to increase. Slag cement provides another tool that allows producers to adjust mixture proportions while maintaining consistent performance across changing conditions.

This flexibility has become even more valuable as producers transition to ASTM C595 Type IL cement. The widespread adoption of ASTM C595 Type IL cement has added another layer to mixture optimization. Type IL cement contains finely ground limestone interground with portland cement. Rather than replacing the need for supplementary cementitious materials, Type IL has expanded the need for producers to develop highly engineered cementitious systems.

Material availability also makes slag cement an increasingly important part of the conversation.

As coal-fired power generation continues to decline across the United States, many regions have experienced reduced availability of fly ash. While fly ash remains an excellent supplementary cementitious material where available, producers

BUILDING CONNECTIONS. CREATING OPPORTUNITIES. GROWING CONCRETE.

Kaylah White
TCA Director

The Annual
Membership
Directory
is a
Roadmap
to
Strong Networks
in
Tennessee's
Concrete Industry

Thank you for
continuing to build
our community.

One thing we all know about construction is that it's built on relationships.

Projects don't happen because someone found a specification in a book. They happen because people know who to call, who they trust, and who has the expertise to solve a problem. That's been true throughout my career, and after just a few months as Executive Director of the Tennessee Concrete Association, it's become even more apparent that it's the greatest strength of our Association.

This annual Membership Directory is much more than a list of companies and contacts. It's a roadmap to one of the strongest networks in Tennessee's concrete industry. Every producer, associate, contractor, engineer, supplier, and partner represented in these pages contributes to an industry that builds our communities.

As I've traveled across Tennessee this summer, one message has become increasingly clear: there is ongoing opportunity for concrete.

Since our Summer Meeting, much of my time has been spent meeting with organizations, owners, designers, educators, and industry partners to identify where TCA can create new opportunities for our members. Those conversations have reinforced that promotion isn't simply advertising concrete. It's bringing the right people together, consistently, before any decisions are made.

Working with the National Ready Mixed Concrete Association regional staff, we've begun developing ideas that can have a lasting impact in Tennessee. We're exploring university partnerships, expanding engineering and architecture outreach, creating project case studies that demonstrate concrete's value, and developing "Day of Concrete" programs that connect students, owners, architects, engineers, contractors, and our member companies through hands-on experiences.

We've begun building and refreshing relationships with organizations whose members influence project decisions every day like chambers of commerce and community economic development groups. We are also working on strengthening our connection with Tennessee's universities. The future of our industry depends on the next generation of engineers understanding concrete not only as a material, but as an innovative, resilient, and sustainable solution. Whether through guest lectures, industry tours, student competitions, or future curriculum partnerships, TCA has an opportunity to become an active partner in engineering education across our state.

Promotion also means providing credible technical resources. We're working with industry experts to develop new educational programming, continue offering lunch & learn services, and strengthen collaboration so owners and designers continue to have confidence in concrete's long-term performance.

While these efforts are exciting, they all support a much larger vision. Whether someone is designing a school, evaluating a parking lot, selecting pavement materials, planning a downtown redevelopment, or simply trying to understand the latest innovations in concrete technology, they should know exactly where to turn: TCA. Our role is to connect them with the right technical information, the right resources, and, most importantly, the right member companies.

That means continuing to invest in relationships with architects, engineers, developers, contractors, public officials, educators, and students long before a project reaches bid day. It means creating educational opportunities that position our members as trusted experts. And it means ensuring Tennessee's concrete industry has a consistent, respected voice whenever important decisions are being made.

Building Connections. Creating Opportunities.
Growing Concrete.

by Kaylah White
Continued from page 6

None of this happens because of one person or one organization.

It happens because our members are willing to open doors, share their expertise, host tours, present Lunch & Learns, mentor students, and demonstrate every day why concrete continues to be the material that builds stronger communities.

As you flip through this directory, I encourage you to look beyond the names and logos. Think of it as a network of professionals committed to advancing our industry together. Every connection you make, every conversation you have, and every opportunity you create strengthens not only your business but the future of concrete in Tennessee.

Thank you for your continued support of the Tennessee Concrete Association. I'm excited about the momentum we're building, and I look forward to working alongside each of you as we continue creating new opportunities for our industry. ■

Concrete Mixture Design is About Balance

by Josh Richardson
Continued from page 4

are increasingly relying on slag cement to help achieve durability and performance objectives. Fortunately, the North American slag cement market continues to expand, with increased domestic grinding capacity and imported material helping meet growing demand.

For Tennessee producers, this provides another opportunity to develop durable, high-quality concrete using materials that are readily available and supported by well-established ASTM standards.

As engineers, producers, contractors, and owners continue embracing performance-based specifications, slag cement will remain one of the industry's most valuable cementitious materials. It offers proven technical advantages, decades of documented performance, and the versatility needed to optimize today's increasingly sophisticated concrete mixtures. ■

TCA Services & STAFF

The Tennessee Concrete Association (TCA) was founded in 1986 to work on behalf of the concrete industry across Tennessee. Our mission statement is: "The TCA is the unified voice for the concrete industry to improve our image and awareness through advocacy, promotion and education that support our members, our community, and our future." We work to fulfill this mission in all of our activities. We invite you to join us in building a concrete industry we can all be proud of. Supported by membership dues and program income, TCA is governed by a 12 member Board of Directors representing all three membership categories (Producers, Associates, and Affiliates).

2026 TCA PROGRAMS

Annual Convention – Brings all members together to celebrate the year's accomplishments and to learn about the latest issues.

Tennessee Concrete Magazine – Published three times annually with research reports and current industry articles.

Membership Directory – Published annually with information advertising your company.

Member Updates – Throughout the year (via email), to keep you informed of Association programs, industry activities and promotional events.

Concrete Excellence Awards – Design, Construction and Environmental awards for projects and plants across Tennessee.

Product Demonstrations & Seminars – Decorative, Pervious, Insulated Concrete Forms, Whitetopping, Flowable Fill and more

Statewide High School Concrete Essay Contest
Trade Show Displays

Concrete Career Academy – Our online learning system offers prep courses to help concrete professionals prepare for certification courses in flatwork, and more. <https://www.pathlms.com/cca>

TCA Website – www.tnconcrete.org and visit us on Facebook at <https://www.facebook.com/tnconcrete/>

Be Pro Be Proud – Discover high demand, rewarding and stable careers.

Concrete Quest – Interactive online game developed for high school students to introduce them to a career in concrete. <https://concrete-quest.com/>

Skate4Concrete – S4C uses skateboarding to introduce students to concrete careers, showing them that a college degree is not the only path to success.

Training and Certification – Exams and training were also offered in the following:

ACI Certification Programs

- Aggregate Testing Technician – Level 1
- Aggregate Testing Technician – Level 2
- Aggregate/Soils Base Testing Technician
- Concrete Field Testing Technician – Grade 1
- Self-Consolidating Concrete Testing Technician
- Concrete Strength Testing Technician
- Concrete Laboratory Testing Technician – Level 1
- Concrete Laboratory Testing Technician – Level 2
- Masonry Field Testing Technician
- Masonry Laboratory Testing Technician
- Post-Installed Concrete Anchor Installation Inspector
- Concrete Construction Special Inspector
- Concrete Transportation Construction Inspector
- Nondestructive Testing Specialist – Concrete Strength
- Shotcrete Inspector
- Adhesive Anchor Installer
- Concrete Flatwork Associate, Finisher, and Advanced Finisher
- Decorative Concrete Flatwork Finisher and Associate
- Residential Concrete Foundation Technician
- Concrete Quality Technical Manager
- Tilt-Up Supervisor and Technician

NRMCA Certification Programs

- Plant and Truck Certification
- Pervious Concrete Contractor Certification
- Certified Concrete Sales Professional (CCSP)
- Exterior Flatwork Finisher Certification

Training – TCA Staff has over 100 years of combined concrete experience and we provide specific training for several of the certifications listed above. Contact John Pearson, PE directly for more information.

Products/Services: WSP is a globally recognized professional services firm providing strategic advisory, engineering and design services to clients in the transportation, infrastructure, environment, building, power, energy, water, and mining sectors. Our trusted professionals are united by a shared goal: to create positive, long-lasting impacts on the communities we serve.

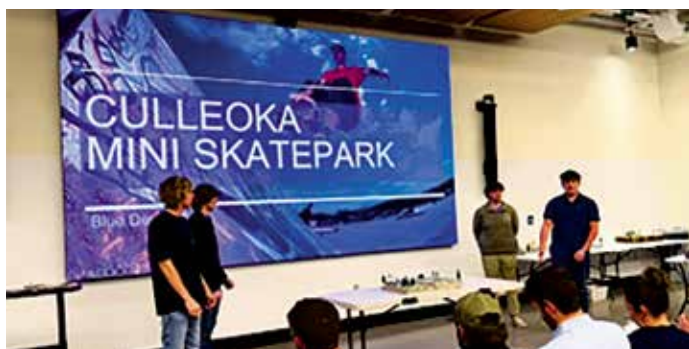

WORKFORCE COORDINATOR'S MESSAGE — TROY "OLLIE" OLIVER

McTwist the Future: Skate4Concrete

Created by the non-profit Project Cornerstone and inspired by skateboarding legend Mike McGill (inventor of the aerial 540° spin, famously known as the McTwist), Skate4Concrete uses skatepark design to turn real-world concrete science into high-impact workforce development. Following a successful beta trial, the full curriculum and hands-on mini-skatepark kit have already engaged over 1,000 students and teachers across 15 states. The certification, recently endorsed by the American Shotcrete Association, is moving through state education boards to gain official Industry Recognized Credential (IRC) status, with Tennessee's application officially submitted.

Tennessee itself holds a proud skateboarding history that bridges talent, extreme angles, and concrete precision. Hendersonville native Ray Underhill, a 1980s Bones Brigade pro, skated alongside Tony Hawk and Mike McGill. Gallatin's Jake Wooten (Santa Cruz/Red Bull) continues to compete globally on world-class vert ramps and street courses. Antioch's Dathan "Dee" Ostrander (Baker Skateboards) famously proved the sheer physics of street skating by ollieing the infamous 18-stair at Legislative Plaza in Nashville—a massive drop with an angle of 30° to 32.5° and a grade approaching 60 to 63 percent (a brutal drop considering highway mountain passes rarely exceed 8 percent grade).

Presentation from Culleoka High School Students to the panel of judges at the mini skate park competition.

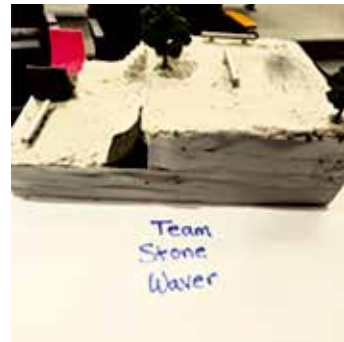

Beyond high school Career and Technical Education (CTE) classrooms, the program funds hands-on summer internships for Concrete Industry Management (CIM) students with top builders like Grindline and NewLine, honoring the late CIM intern Dominic Lencioni. With a new Concrete Sustainability module in development, Skate4Concrete continues to build a direct bridge between youth culture, local legacy, and concrete industry careers.

Learn more. To explore the program, bring it to a local school, or support an intern, visit skate4concrete.com.

CARBONATION RESEARCH PROJECT A TWO-YEAR UPDATE

TCA has completed the 2-year readings for the 10-year Carbonation Research Project that began in the Spring of 2024. When concrete naturally carbonates it becomes a carbon sink, trapping the greenhouse gas CO₂. In case you have not been following this work, the study looks at how concrete carbonation is affected by surface orientation (vertical versus horizontal), exposure to rain, the application of surface treatments such as acrylic and penetrating sealers, and varying amounts of supplementary cementitious materials. In general, the carbonation testing was performed by applying a 1% phenolphthalein solution to a freshly fractured surface of each test specimen. The portion of the fractured surface that turned dark pink/purple was considered non-carbonated. The portion of the concrete that is considered carbonated undergoes no color change. The carbonation depths were determined by measuring from the finished or formed surface down to the pink/purple non-carbonated concrete. Some of the observations to date include the following:

- In general, the carbonation rate of dry in-service concrete was higher than the same concrete exposed to rain/water.

- In general, the carbonation rate of the lower embodied carbon mix was higher than a similar mix using lower replacement rates of supplementary cementitious materials.
- Acrylic sealers applied to concrete flatwork had a significant impact on reducing the measured carbonation at these early test ages.
- Although theoretical carbonation rates commonly used to predict carbonation depths for concrete exposed to rain do not differentiate between vertical and horizontal surfaces, in our study the vertical surfaces exhibited a higher carbonation rate comparable flatwork using the same mix. It is not clear if this difference is due to the orientation of the concrete, the type of surface (formed versus finished), or both.

Additional readings are scheduled for years three, five, and ten. We will continue to provide updates on this research as the study continues. We would like to thank the Concrete Research Foundation for providing funding for this project and Wiss, Janney Elstner Associates for assisting TCA with the carbonation testing protocols.

Inspiring the Next Generation: Be Pro Be Proud Tennessee

True workforce development is about real miles logged and genuine student connections. Since October 2023, the Be Pro Be Proud Tennessee mobile workshop has been doing exactly that—traveling the state to bring 14 state-of-the-art VR simulators (including Caterpillar bulldozer and excavator simulators) directly to career-seekers. The hard data from the ground tells the real story of its impact: 44,559+ individuals have explored the trailer across 226 tour stops in 137 cities, sparking active career interest in 7,909 future professionals.

TCA Staff always makes it a point to visit the Jason & Allison through the school year. The TCA Concrete Quest & Concrete Cylinder Activity and Competition blue bucket kits are on the Be Pro Be Proud Tennessee Truck to help spark interest in concrete careers.

As a proud sponsor of this initiative, the Tennessee Concrete Association (TCA) extends a massive thank you to Jason and Allison for their incredible hard work and dedication while executing these events on the road. The momentum continues into the 2026–2027 season, with a packed fall tour kicking off this August at the Tennessee

Jason and Allison and Be Pro Be Proud Tennessee won the 2026 Best Be Pro Be Proud Team awards out of all 10 state workshops!

State Fair and hitting middle and high schools across Middle and West Tennessee. To view the full upcoming tour schedule or invite the trailer to your community, visit: tn.beprobeproud.org/tourstops.

CIM UPDATE

by Jon Huddleston, Associate Professor & CIM Director

CIM Can't Succeed Without Quality Students

May 2026 CIM Graduates

The semesters seem to fly by, and it's hard to believe another academic year is already beginning. At each graduation, the graduating class inevitably asks if they were my favorite. Of course, just like with your own children, you're not supposed to have favorites—but I have to admit, this class left an extraordinary mark on our program. During their time at CIM, the ACI student club grew by more than 300 percent, tripled the number of public-service concrete pours, and brought tremendous energy, pride, and enthusiasm to concrete competitions. More importantly, their leadership and involvement helped shape the culture of the program and contributed significantly to its continued success.

Tennessee Veterans Home Wheelchair Pad

This group uplifted and mentored countless underclassmen. They demonstrated the importance and value of networking and the CIM college experience. Their success was reflected in achieving the highest average starting salary in the School of Concrete and Construction Management (SCCM).

May 2026 Patrons Senior Dinner

April 2026 SCCM Hardhat ceremony at Murfreesboro Country Club

We concluded the spring semester with the annual SCCM Hardhat Ceremony, celebrating an exceptional class whose accomplishments exemplify the strength of the CIM program. Students earned numerous scholarships, recognition for ACI as the school's top student club, and awards for outstanding academic performance across the school's programs. Their achievements, leadership, and dedication remind us why we are so proud to support CIM—and why we continue to believe it is one of the best college majors and career paths available today.

Our students play an essential role in making events such as Ladies in Concrete and the new Concrete Experience possible. In May, more than 250 middle and high school students participated in hands-on demonstrations featuring concrete materials, heavy equipment, welding, masonry, and construction technologies. These events help strengthen the workforce pipeline by introducing young people to the diverse and rewarding career opportunities available throughout the concrete and construction industries. Their success is truly a collaborative effort: our industry partners generously provide expertise, demonstrations, and interactive booths, while our student groups provide the coordination, leadership, and energy that bring these experiences to life.

Summer has given us a chance to catch our breath while our students are spread across the country gaining valuable experience through internships. We've planned for the year ahead, cleaned the labs, restocked the shelves, and prepared to welcome a new group of students. In the midst of all that preparation, one thought kept coming back: we are really going to miss this remarkable group of young people. It seemed only fitting, then, to dedicate this update to the students and graduates whose leadership, hard work, and enthusiasm make CIM the program it is. To the Class of 2026, thank you for all you have contributed. We are proud of you, we will miss you, and we can't wait to see what you accomplish next.
