# PLANS TO BUILD: PAUSED

I am very pleased to report that TCA will be moving into a new home later this year. To say that our journey to this new home has been exciting would be true, but a bit simplistic. This journey began all the way back in 2007 when TCA purchased property at our old Fort Negley location. We were never able to build at this location but our purchase and subsequent sale of this urban location catapulted your association to financial stability.

Today we own property in Davidson County free and clear of any debt. Our plans to build on this property have now been paused due to the usual suspects: supply chain, Nashville's ongoing building boom and very real inflation in construction costs. But, TCA is not pausing in pursuit of increasing our capacity to serve the needs of the concrete industry in Tennessee. To this end, we have just leased space in the same neighborhood where we own property and modifications are now underway to provide everything we had planned for our new office. At the top of this list is our Concrete Lab and a separate Concrete Classroom to power our vital efforts for industry certification and training here in Tennessee.

TCA is planning to move into this new home later this fall, and we will begin conducting classes and certifications in the new space as soon as we can. In fact, we have already scheduled a class in conjunction with our partners at the National Ready Mixed Concrete Association for December of this year — stay tuned for registration information on this and other events in our new location.

Your Board of Directors at TCA is looking to the future and planning our strategy for 2023 and beyond. Thanks to all of our members for your support and participation that makes our progress possible!

Sam Pittenger, President of TCA's Board of Directors

Harrison Construction

# Placing Pervious Concrete

Pervious Concrete Allows Rainwater to seep into the ground. It is instrumental in recharging groundwater and reducing storm water runoff.

**Pervious is a Special Mix...  
It Requires Special Tools to Place It**

## WILDCAT ROLLER SCREED

Wildcat Roller Screed \$2195  
Roller Tubes \$30 per ft  
End Plugs \$290 Weight \$200

GROOVING  
ROLLER

# PCRG  
\$790

CROSS COMPACTION  
ROLLER

# PCR  
\$600

## COMPLETE PERVIOUS PACKAGE

*"The Wildcat Screed has become my preferred placement method because of it's lightweight, easy to use, and produces a great finish."*

Sarah Egan  
TN Concrete Association  
NRMCA Certified Pervious Concrete  
Installer

The Wildcat Roller Screed is the easiest to use on the market and the most economical. It is also an ideal tool for concrete sidewalks, walking trails and golf cart paths.

We welcome comparison to any other brands.

# TCA: MAKING IT EASY TO CONNECT

**Alan Sparkman**  
*Executive Director*

We love making it  
easier for Customers  
to Connect with  
Members  
——  
Working to connect  
talented people  
seeking employment  
in the concrete  
industry with our  
members.

**W**elcome to the 2022 Directory Issue for the Tennessee Concrete Association! We love making it easier for customers to connect with our members and this is one of many ways that TCA does just that.

The TCA web site has a brand new look and organization — if you haven't visited us recently check it out at [www.tnconcrete.org](http://www.tnconcrete.org). You can find a wealth of information about concrete at our site, along with the latest information on our ACI certification classes, local events, research and much more. Moreover, find a brand new blog section where you will find a direct link to our new *Tennessee Concrete Conversations* podcast along with excerpts from our *Tennessee Concrete* magazine as well as our regular Member Updates.

Also exciting is TCA's Work in Concrete campaign that you will find on our various social media pages, as well as on our website. We are working to connect talented people seeking employment in the concrete industry with our members who are looking for great people to help create the future of our industry. If you are a TCA member and want to have your company listed on the Employment Opportunities page of our site (most of you are already there!) just let me know.

TCA is all about making connections that make your business stronger!

Alan Sparkman, Executive Director of TCA

At Lafarge, our commitment goes far beyond the raw materials we produce. We bring together the best solutions and materials to build more durable, compact and connected cities. And when you build better cities you get buildings, roads and infrastructure that truly reflect the changing needs of today's communities.

It's this kind of ongoing dedication that's an integral part of the Lafarge culture. And it shows. Whether it's our focus on safety, the well-being of our employees, or the satisfaction of our customers – it's all about ensuring a better quality of life for everyone involved.

## TCA Services & STAFF

The Tennessee Concrete Association (TCA) was founded in 1986 to promote the increased use of ready mixed concrete in Tennessee. Our mission statement is: "The TCA is the unified voice for the concrete industry to improve our image and awareness through advocacy, promotion and education that support our members, our community, and our future." We work to fulfill this mission in all of our activities. We invite you to join us in building a concrete industry we can all be proud of. Supported by membership dues and program income, TCA is governed by a 12 member Board of Directors representing all three membership categories (Producers, Associates, and Affiliates).

## Association STAFF

**Alan Sparkman**  
Executive Director

**Darla Sparkman**  
Director of Certifications

**John E. Pearson, P.E.**  
Director, Technical Services

**Julia Hudson**  
Online Education Coordinator

# 2022 TCA PROGRAMS

**Annual Convention** – Brings all members together to celebrate the year's accomplishments and to learn about the latest issues.

**Tennessee Concrete Magazine** – Published 3 times annually with research reports and current industry articles.

**Membership Directory** – Published annually with information advertising your company.

**Member Updates** – Throughout the year (via email), to keep you informed of Association programs, industry activities and promotional events.

**Concrete Excellence Awards** – Design, Construction and Environmental awards for projects and plants across Tennessee.

**Product Demonstrations & Seminars** – Decorative, Pervious, Insulated Concrete Forms, Whitetopping, Flowable Fill and more ....

**Statewide High School Concrete Essay Contest Trade Show Displays**

**Concrete Career Academy** – Our online learning system offers prep courses to help concrete professionals prepare for certification courses in flatwork, and more. <https://www.pathlms.com/ccca>

**TCA Website** – [www.tnconcrete.org](http://www.tnconcrete.org) and visit us on Facebook at <https://www.facebook.com/tnconcrete/>

**Training and Certification** – Exams and training were also offered in the following:

#### ACI Certification Programs

- Aggregate Testing Technician – Level 1
- Aggregate Testing Technician – Level 2
- Aggregate/Soils Base Testing Technician
- Concrete Field Testing Technician – Grade 1
- Self-Consolidating Concrete Testing Technician
- Concrete Strength Testing Technician
- Concrete Laboratory Testing Technician – Level 1
- Concrete Laboratory Testing Technician – Level 2
- Masonry Field Testing Technician
- Masonry Laboratory Testing Technician
- Post-Installed Concrete Anchor Installation Inspector
- Concrete Construction Special Inspector
- Concrete Transportation Construction Inspector
- Nondestructive Testing Specialist – Concrete Strength
- Shotcrete Inspector
- Adhesive Anchor Installer
- Concrete Flatwork Associate, Finisher, and Advanced Finisher
- Decorative Concrete Flatwork Finisher and Associate
- Residential Concrete Foundation Technician
- Concrete Quality Technical Manager
- Tilt-Up Supervisor and Technician

#### NRMCA Certification Programs

- Plant and Truck Certification
- Pervious Concrete Contractor Certification
- Certified Concrete Sales Professional (CCSP)
- Exterior Flatwork Finisher Certification

**Training** – TCA Staff has over 100 years of combined concrete experience and we provide specific training for several of the certifications listed above. Contact John Pearson, PE directly for more information.

## CIM AT THE BIG MACHINE MUSIC CITY GRAND PRIX

Ashley and Kayla Gates at the Big Machine Music City Grand Prix track tour

MTSU's Concrete Industry Management (CIM) reconnected this year with the Big Machine Music City Grand Prix for the second year of their continuing partnership. CIM worked with the Grand Prix last year to develop a special lighter weight and more durable mix for the concrete barriers around the track, as well as concrete pads along pit row.

Rising seniors Kayla and Ashley Gates, CIM Director Jon Huddleston, and SCCM Director Kelly Strong met with track designer Tony Cotman for a special tour of the track and discussion of how the reuse and reinstallation of the barriers was handled. The Gates sisters also worked the CIM booth advertising to race goers and talking

about their experience in the CIM program. They had the opportunity to show off the precast commemorative panel they design and constructed which included the CIM and MTSU logos as well as a silhouette of an Indy car. The students included Chyrso Inc's Lumintech luminescent aggregate in the design which really made the logos stand out as night fell in downtown Nashville.

Ashley and Kayla Gates cast their Grad Prix panel with CIM Director Jon Huddleston

## CIM NASA INTERNS WRAP UP AN EXCITING SUMMER

Middle Tennessee State University's Concrete Industry Management Program, Jacobs Space Exploration Group, The University of Alabama in Huntsville, and Southern University and A&M College – Baton Rouge, LA partnered with Drake State Community and Technical College in Huntsville for the first MUREP (NASA's Minority University Research and Education Project) Frontiers Research Colloquium and it was an absolute success.

The groups, including students, shared their knowledge of additive manufacturing, structural health monitoring on lunar structures, and advances in concrete materials which they learned about and developed as a part of the 10-week internship program. The conversations and roundtable discussion were impactful and will continue with additional intern groups over the next two years that will continue to develop the ideas and initiatives conceived this summer.

Ashley and Kayla Gates share their internship at NASA MUREP in Huntsville, Alabama

## SCHOOL OF CONCRETE AND CONSTRUCTION MANAGEMENT BUILDING UPDATE

We've all been haunted by supply chain and weather issues and the new School of Concrete and Construction Management building is no exception. However, opening day is just around the corner. Due to delays the building will not be open for student's return on the first day of the fall semester, but we will host our first class in the new facility upon our return from fall break on October 12. On October 13, CIM will host its fall patrons meeting in the new facility and the day will be kicked off with MTSU President, Dr. Sydney McPhee, hosting a ribbon cutting event at 10 a.m. Feel free to join us in the ribbon cutting and the day long open house for a tour of the new facility.

## WHEN A LOW BREAK IS NOT REALLY A LOW BREAK: REPORTING AND EVALUATION OF CONCRETE TEST RESULTS

**Y**ou just received the concrete strength test report for that big wall pour from last month and you see the dreaded “low break” flagging on one of the test results. The test result falls shy of the 4000-psi design strength by a couple of hundred psi. It’s time to get out that coring machine and see if you have a problem ... NOT SO FAST! That “low break” may meet all project and code requirements, and by design, may be an acceptably normal occurrence based upon mixture proportioning and acceptance requirements ACI 318 *Building Code Requirements for Structural Concrete Code and Commentary* and ACI 301 *Specifications for Structural Concrete*.

All parties on a project want to be informed as soon as possible when a true low-strength test result occurs or will likely occur. As a result, testing labs will flag certain test results as a low break so that the project team is quickly informed, and timely decisions can be made. Some labs may flag a single test cylinder that breaks below the specified strength ( $f_c'$ ) as a low break, or a single set of cylinders that has an average strength below  $f_c'$  as a low break. Additionally, some labs flag an early age break as a low break if a certain percentage of  $f_c'$  is not achieved. Although well intended, these practices can unintentionally create issues if the project’s acceptance criteria are not well understood by all parties, especially since the triggers for “low break” status are not consistent across the industry and may not be in line with project and code compliance requirements. This can often lead to project delays and unnecessary costly coring of the structure.

Let’s look at how ACI 318 and ACI 301 define acceptable concrete. For acceptance, a strength test is the average of the strengths of at least two 6 x 12 cylinders or at least three 4 x 8 cylinders made from the same test sample and tested at an age of 28 days or at a test age designated for  $f_c'$ . For standard cured cylinders (cylinders sampled in accordance with ASTM C172, standard cured in accordance with ASTM C31, and tested for compressive strength in accordance with ASTM C39) the strength level of a concrete mixture **shall** be deemed acceptable if both the following are satisfied:

1. Every arithmetic average of any three consecutive strength tests equals or exceeds the specified strength ( $f_c'$ ).
2. No strength test falls below  $f_c'$  by more than 500 psi if  $f_c'$  is 5000 psi or less, or by more than 0.10  $f_c'$  if  $f_c'$  exceeds 5000 psi.

If either of these criteria is not satisfied, then measures need to be taken to increase the average of subsequent strength results. The actions may include adjustments to the mix, improvements in

quality control, or improvements in the quality of the compliance testing. However, it is only upon failure of the second criteria (e.g., a 4000-psi concrete breaking below 3500 psi at 28 days) that a low-strength test result investigation is required, and steps need to be taken to ensure that the integrity of the structure is not jeopardized. The code states, “If the likelihood of low-strength concrete is confirmed and calculations indicate that the structural adequacy is significantly reduced, tests of cores drilled from the area in question shall be permitted.” Per the code commentary, coring is more of a last resort in limited circumstances and not a default when acceptance criteria are not met. Real world examples on how to apply the ACI 318 acceptance criteria can be found in a free document developed by ACI: ACI E702.3-21 *Designing Concrete Structures: Acceptance of Concrete Compressive Strength Test Results According to ACI 318-19*.

The intent of code proportioning and acceptance criteria is to reduce the risk of accepting low-strength concrete to a statistically acceptable level, while limiting the occurrence of rejecting acceptable concrete. When the ACI 318 criteria are correctly and strictly applied it should be anticipated to have the occasional occurrence (about 1 for each 100 tests) where the acceptance criteria are not met but the strength and uniformity of the concrete are satisfactory. This should be considered when evaluating test results. However, erroneously applying alternate more restrictive criteria will significantly increase this probability.

According to ACI 214 *Guide to the Evaluation of Strength Test Results of Concrete*, a project with only seven strength test results would have an approximate 10 percent probability of one of the strength tests not meeting one of the acceptance criteria (1 and 2 above) but would have about a 50 percent probability of having one test result that falls below  $f_c'$ . Therefore, considering any break below  $f_c'$  as a failing test will likely result in the rejection and potentially the removal of quality, code compliant concrete. This is not to say that this type of occurrence should be ignored and not noted in some way on concrete test report. However, these occurrences should be identified in a way that is not prone to misinterpretation. Consider the law enforcement world. There is a difference between a person of interest, a suspect, and the perpetrator. Word choice matters — once a label is incorrectly applied, it is hard to undo the damage. Similarly, there is a difference in an anomaly or noteworthy break, a suspected or potential low break, and an actual low-strength test result. Effective communication is critical to a successful project. Correctly characterizing the and evaluating break results based upon the acceptance criteria for the project could end up saving your project time and money.
