Field Artillery Symposium
18 May 2022

Battlefield Geometry

BLUF: The FSCoord and Fires WfF must assist in defining higher, adjacent, Corps, and Divisional fights in order to help achieve complementary effects and unity of effort on the battlefield.

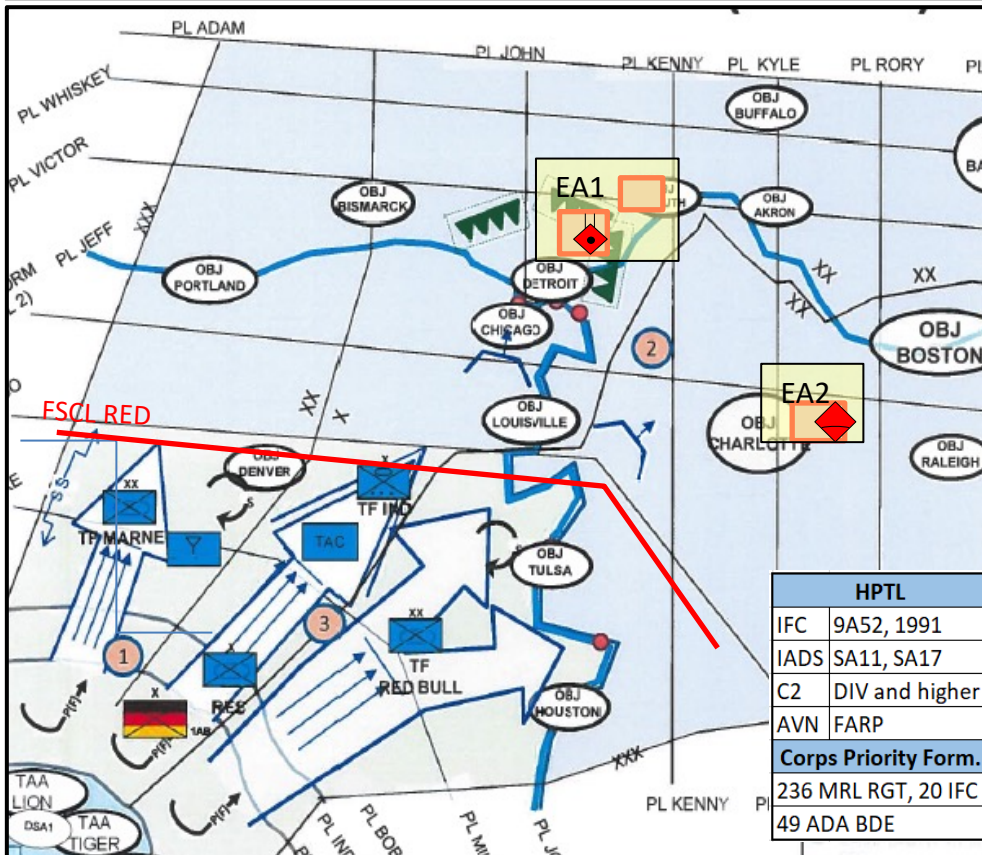

1. Define Division and Corps Shaping Areas
2. Recommend FSCL placement
3. Minimize Fires in Reserve
4. Maximize Rotary and Fixed Wing Aviation effects across the depth of the AO

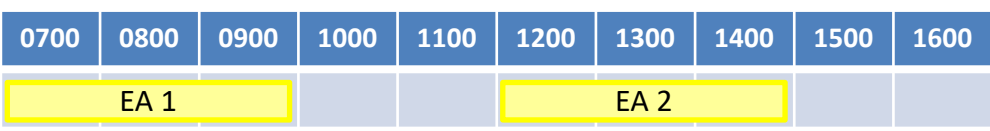

Focusing Capabilities/Resources

BLUF: The Intel & Fires WfF must focus collection, lethal and non-lethal delivery, and assessment assets in time and space to target high payoff targets (HPTs) to reduce enemy capability.

1. This begins in MDMP; and refined / localized (in space and time) during the targeting process.
2. During execution, Target Areas of Interests (TAIs) are adjusted as enemy situation template changes to better identify HPTs within priority enemy formations.
3. Engagement Areas (EAs) are developed to focus the collection and delivery assets in space and time to identify and engage HPTs.
4. Timely assessments are required to ensure effects are achieved to maintain operational tempo.

Engagement Area (EA)

Target Area of Interest (TAI)
