

2022 Fall Smoke Schools

Richmond, VA - September 6

Roanoke, VA - September 7

Abingdon, VA - September 10

About the Course

The VTCA Smoke Schools are designed to produce qualified observers who can make plume opacity determinations that are accurate and minimally affected by variable field conditions.

Compliance Assurance Associates, Inc. will conduct the smoke schools in accordance with EPA Reference Method 9, offering attendees who meet the qualification requirements with official certification to conduct visible emissions evaluations. Compliance Assurance's training meets or exceeds EPA requirements, and the requirements of each State environmental agency, including Virginia. The certificates are valid nationwide.

The workshop consists of an optional online half day classroom lecture and a half day Method 9 field-testing and certification. *The classroom lecture is now held online. The online classroom portion is a self-paced lecture that will take about two hours and needs to be completed prior to the field session. Compliance will email participants a link to the classroom lecture after you sign up for the training.*

Attendees will take the Method 9 certification field test and earn a certificate in one day. EPA recommends the lecture for all new attendees. You are required to retake the field test every six months to maintain Method 9 certification. ***For all field-testing participants, it is strongly suggested that you wear a mask and follow social distancing requirements during the field-testing session. Also, each participant will be required to bring their own mobile device or their own clipboard and pen for testing purposes.***

Each test consists of opacity readings of 25 white plumes and 25 black plumes. Attendees will know the fundamentals required for reading opacity before each portion of the test. Testing methods and equipment meet or exceed EPA requirements.

Online Classroom Program Includes:

- ◆ History, theory, and methods for evaluating visible emissions;
- ◆ Sources of visible emissions;
- ◆ Air pollution meteorology;
- ◆ Field operations;
- ◆ Legal concepts;
- ◆ Testing procedures;
- ◆ Focus is on how to make reading legally defensible.

Field Activities Include:

- ◆ Presentation of opacity standards to familiarize applicants with the characteristics of those standards and to teach applicants to recognize the standards and determine opacities of stationary plumes.
- ◆ Practice runs of readings. These runs allow feedback to the student and assist in the learning process. Each participant can evaluate their own performance and adjust their readings as needed.
- ◆ Qualification runs. Applicants must meet the following criteria for each run: 50 readings (25 white, 25 black); randomly presented values (from 0-100% opacity); pass on both white and black sets on the same test; average error rate of 7.5% or less; and no error greater than 15% opacity will be accepted.
