

Company Name

Document Reference: #16

PC/Pre Document

Document Type: Finished Product Specification

Page: 1 of 1

(Name of company) has a written finished product specification for each product. Specifications are normally provided by the customer and are approved by (Name of Company). For stock items that are not customer specific, (Name of Company) develops finished product specifications for those items. The specifications are made available to relevant personnel in production, process control and QA personnel.

A finished product specification can include physical, microbiological, chemical and packaging specifications for the product.

Specifications, as a minimum, comply with the appropriate food safety legislation and are updated as required.
