Document Type: Chemical Control Program

1 of 1

Hazardous chemicals and toxic substances with the potential for food contamination are stored so as not to present a hazard to personnel, product, packaging, product handling equipment or areas in which the product is handled, stored or transported.

No pesticides are stored onsite. These are provided and used by the contracted pest control provider.

All chemicals are stored in their original containers except if stored in a chemical cabinet they are stored in smaller labeled containers that are used only for the purpose of storing chemicals.

Hazardous chemical and toxic substance storage facilities:

- I. Are compliant with relevant legislation and designed such that there is no cross-contamination between chemicals.
- II. Are adequately ventilated
- III. Are provided with appropriate signage indicating the area is hazardous storage area.
- IV. Are secure and locked to restrict access.
- V. Have instructions on the safe handling of hazardous chemicals and toxic substances readily accessible to personnel.
- VI. Are equipped with a detailed and up-to-date inventory of all chemicals contained in the storage area.
- VII. Have suitable first aid equipment and protective clothing available in close proximity to the storage area.
- VIII. In the event of a hazardous spill, are designed such that spillage and drainage from the area is contained.
- IX. Are equipped with spillage kits and cleaning equipment.

Safety Data Sheets are posted in **the ????????**
