**Naloxone** is a prescription medicine used for the treatment of a known or suspected opioid overdose emergency with breathing problems and severe sleepiness or non-responsiveness. Emergency Naloxone is easy to administer. It is also available at certain locations without a prescription.

<https://www.narcan.com/patients/how-to-use-narcan>. Steps for the rescuer:

1. **Call 911:** Tell the operator if the person experiencing the overdose has stopped or slowed breathing.
2. **Give Naloxone**
  - a. Remove any objects from the mouth of the person experiencing the overdose.
  - b. Start rescue breathing: tilt head back, lift chin, pinch nose with other hand, give one breath every five seconds. Continue this for 30 seconds.
  - c. Give naloxone again after 2-3 minutes if there is still no response. More than one dose is sometimes needed.
3. **Lay person on side:** Lay the person on their side to prevent choking. Keep the person awake and breathing.
4. **Stay until help arrives:** Stay with the person experiencing the overdose until emergency workers arrive.

## Where to get Naloxone (Narcan)

### Pharmacies Dispensing Narcan

#### Walgreens:

10489 State Road 27, Hayward
