

Founded in 1966 and headquartered in Eden Prairie, Minnesota, U.S.A., MTS Systems Corporation is a leading global provider of testing and sensing solutions for applications in research, product development, quality control and production. MTS products and services allow engineers and manufacturers to develop higher-quality products at a greater speed and a lower cost.

MTS is recognized worldwide for its applications knowledge and cooperative approach to solving problems, along with a vast global service network that helps customers attain and maintain peak productivity. Dedicated employees support our customers around the world.

Throughout our decades-long history, we have remained driven by the singular pursuit of helping our customers build confidence in the performance of their products. This pursuit has led to the introduction of a long list of industry-changing technologies.

For example, we first made it possible to precisely simulate the real-world operating conditions of aircraft and ground vehicles in a controlled, repeatable test lab environment. We have since extended these advantages to a full spectrum of other testing applications, ranging from materials and components to orthopaedic implant devices, wind turbines, buildings and bridges. We're also leveraging today's high PC processing speeds to create virtual models that replace more physical testing, resulting in significant time- and cost-saving advantages. In addition, our exclusive technologies in magnetostrictive sensing help industrial manufacturers achieve new levels of manufacturing speed and efficiency.

These are just some of the technologies that MTS has pioneered alongside its customers. Now we're clearly focused forward, developing new ways to help people develop products that perform better and cost less to get to market, while remaining agile enough to meet whatever new demands the future may hold.

While our offering is deep, our geographic reach is broad and the list of industries we serve is vast, all of our customers choose to work with us for the same reason. Nobody instills greater certainty than MTS.

An **ITW** Company

MTS testing solutions are currently hard at work in industries ranging from aerospace and ground vehicle development to material evaluation, biomedical device development and geomechanical, civil and seismic engineering.

The pursuit of energy-efficient transportation continues to create significant research and development activity around the world, and MTS is at the forefront of these exciting innovations.
