Program Overview:

The Empowering Women in Production program is an approximately 20-week course designed to support the professional development of production floor employees. Employees in production settings often have tremendous insight into the culture, products, and processes that manufacturing companies need to understand to innovate. By developing these women into leaders, we can improve the industry overall and inspire other women to explore careers in manufacturing.

The program is geared for female, entry-level management professionals in manufacturing and/or individuals interested in becoming a manager or supervisor. Examples of participating roles include: engineering administrator, sales manager, executive assistant, operational prefect, associate manager, office manager, and industry analyst.

Program Audience:

Women in production, direct production support, and shop-floor roles in manufacturing

Program Participant Profile:

Margo, Quality Assurance Specialist - Came in through a temp agency a year ago, now a full-time employee in quality department

Briana, Assembly Tech I - New to manufacturing, transitioned from retail, interested in team leadership in the future
